COST OF TRANSPORTATION OF MAILS ON THE UNION
PACIFIC RAILROAD.

LETTER

FROM

THE POSTMASTER GENERAL,

RELATIVE TO

The amount paid the Union Pacific Railroad Company for transportation of mails in each fiscal year since June 30, 1866.

JANUARY 30, 1873.—Referred to the Select Committee of Investigation on the Credit Mobilier, appointed under the resolution of the House of January 6, 1873, and ordered to be printed.

POST-OFFICE DEPARTMENT,

Washington, D. C., January 29, 1873.

DEAR SIR: In answer to so much of the resolution adopted by the House of Representatives on 20th instant, on motion of Mr. Palmer, as directs me to report to the House “the amount paid the Union Pacific Railroad Company for transportation of the mails in each fiscal year since June 30, 1866, together with an estimate of what said transportation would have cost if said railroad had not been constructed,” I have the honor to state that the Auditor of the Treasury for the Post-Office Department reports to me the amounts paid the Union Pacific Railroad Company as follows, viz:

Fiscal year ended June 30, 1867, (May and June)	\$7, 289 83
Fiscal year ended June 30, 1868	82, 954 65
Fiscal year ended June 30, 1869	226, 109 25
Fiscal year ended June 30, 1870	272, 075 00
Fiscal year ended June 30, 1871	283, 855 00
Fiscal year ended June 30, 1872	283, 855 00
Total	1, 156, 138 73

To estimate what “said transportation would have cost if said railroad had not been constructed,” I take for comparison the cost of the service superseded by the transfer of the mails to the Union Pacific Railroad. The service superseded was the following, viz:

1st. Route 14401, from Council Bluffs, Iowa, to Kearney City, Nebraska, 198½ miles, and back, six times a week, under contract to Rufus Haywood, at \$20,043 per annum. The contract was to expire June 30,

1870; but, in consequence of the transfer of the mails to the Union Pacific Railroad, the service was superseded from and after May 31, 1867, the contractor being allowed one month's extra pay, in conformity with a stipulation in the contract. The three years' pay thus dispensed with would have amounted to \$60,129. Supposing that, if the railroad had not been constructed, the contract could have been renewed at the same rate, the two years' pay from July 1, 1870, to June 30, 1872, would have amounted to \$40,086, making, with the \$60,129 above mentioned, \$100,215.

2d. Route 14260, from Atchison, Kansas, to Salt Lake City, Utah, 1,220 miles, and back, daily, under contract to Ben Holladay for four years from the 1st October, 1864, to 30th September, 1868, at \$365,000 per annum. On the 31st July, 1866, an order was made permitting the contractor to change the route so as to have two points of departure, one from Junction City, Kansas, on the Union Pacific Railroad, eastern division, (now the Kansas Pacific,) running from Wyandotte, Kansas, and the other from Fort Kearney, Nebraska, on the Union Pacific Railroad, running from Omaha, Nebraska, the two lines meeting at Denver City, Colorado. This change was made without any diminution of the contractor's pay. The only deductions from his pay, on account of the extension of the Union Pacific Railroad, was one at the rate of \$17,352 per annum for a curtailment of fifty-eight miles' distance, between Cheyenne and Laramie City, from June 15, 1868, and another at the rate of \$36,200 per annum for a curtailment of one hundred and twenty-one miles' distance, between Laramie City and Benton, from August 10, 1868. On the amount of service dispensed with by these curtailments a month's extra pay was allowed, in conformity with the terms of the contract. The amount of the two deductions, less the month's extra pay, from their dates to the close of the contract term, 30th September, 1868, was \$5,753.28. Supposing, again, that if the railroad had not been constructed, the contract for service on this route could have been renewed on the same terms; the pay from 1st October, 1868, to 30th June, 1872, would have amounted to \$1,368,750, making, with the \$5,753.28 above mentioned, \$1,374,503.28.

3d. Route 1517, from New York, by Aspinwall and Panama, to San Francisco, 6110 miles, and back, three times per month, under contract to the Pacific Steamship Company, at \$150,000 per annum, to expire 30th June, 1870. One of the monthly trips was discontinued from and after 31st December, 1869, thus dispensing with pay to the amount of \$25,000 for the six months remaining of the contract-term to 30th June, 1870. Adding \$300,000 for two years, from the 1st July, 1870, to 30th June, 1872, on the supposition that this service would have been continued if the railroad had not been constructed, the cost on this route would have amounted to \$325,000.

Adding the supposed cost on the three routes, namely, on the first, above described, \$100,215; on the second, \$1,374,503.28; and on the third, \$325,000—\$1,799,718.28 may be set down as "an estimate of what said transportation would have cost if said railroad had not been constructed."

On the expiration of Holladay's contract for route 14260—the second above described—a contract was made with Wells, Fargo & Co. for carrying mails overland, between the termini of the Union Pacific Railroad and the Central Pacific Railroad, daily for the term of one year, from 1st October, 1868, or until the two railroads should meet, at the rate of seventeen hundred and fifty thousand dollars per annum, subject to deductions *pro rata* for every section of fifty miles of railroad

completed and reported to the Department ready to carry the mails. The service under this contract continued only 221 days, from 1st October, 1868, to 9th May, 1869, when the two railroads met; and the amount of compensation actually paid for the whole period was only \$494,296.55. As, if the railroads had not been in course of construction, with a promise of completion in less than a year, such a contract could not have been made, the rate of compensation allowed in this contract cannot be used as a basis of the estimate for which the resolution calls.

It should be borne in mind that the mail-service by the railroad route between the Missouri River and the Pacific coast is incomparably superior to the previous service. Under the contracts which expired in 1868, the schedule time for the trip from Atchison, Kansas, to San Francisco, California, was sixteen days for the eight months from April to November, inclusive, and twenty-four and a half days the residue of the year. By the railroad route the time, the year round, is less than four and a half days. The average amount of matter conveyed in the mails overland before the completion of the railroads was less than a thousand pounds per day, the paper-mails being mainly forwarded via Panama, in consequence of the exaction of prepaid letter-postage rates on such matter conveyed between the western boundary of Kansas and the eastern boundary of California, under the fourth section of the act of March 25, 1864. Now, that section having been repealed from 30th September, 1868, by the act of June 25, 1868, the whole letter and paper mails are carried overland, averaging, in March, 1870, on the Union Pacific railroad, 6,376 pounds per day, and on the Central Pacific, 5,308 pounds per day. The railroad companies provide, moreover, first-class cars, 48 feet in length, with all necessary fixtures and furniture, in which railway post-office clerks appointed by the Department accompany and distribute the mails while in transit, in all respects as if in local distributing post-offices, by which means the detention of mails in such offices is avoided, and the greatest practicable expedition secured.

Very respectfully, your obedient servant,

JNO. A. J. CRESWELL,
Postmaster-General.

HON. JAMES G. BLAINE,
Speaker House of Representatives.

CLERKS AND EMPLOYÉS IN THE DEPARTMENT OF THE
INTERIOR.

L E T T E R

FROM

THE SECRETARY OF THE INTERIOR,

RESPECTING

*Numbers, &c., of persons appointed in his Department for duty in Washing-
ton during the year 1872.*

JANUARY 30, 1873.—Referred to the Committee on Appropriations and ordered to be
printed.

DEPARTMENT OF THE INTERIOR,
Washington, D. C., January 25, 1873.

SIR: In compliance with the terms of the House resolution adopted
January 18, 1873, I submit herewith a statement of the employés of
this Department, appointed during the year 1872, for duty at the city
of Washington, designating those who were appointed under the opera-
tions of the civil-service rules.

Very respectfully, your obedient servant,

C. DELANO,
Secretary.

The SPEAKER of the House of Representatives.

A statement of the employés of the Department of the Interior appointed during the year 1872, for duty in the city of Washington, &c., as requested in House resolution of January 18, 1873.

WORKS ON RIVERS AND HARBORS.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The repair, preservation, and completion of certain public works on rivers and harbors, &c.

FEBRUARY 11, 1873.—Referred to the Committee on Commerce and ordered to be printed.

WAR DEPARTMENT, *February 8, 1873.*

The Secretary of War has the honor to submit to the House of Representatives the accompanying additional reports of examinations and surveys, made in compliance with the second section of the act approved June 10, 1872, making appropriations for the repair, preservation, and completion of certain public works on rivers and harbors, &c.

WM. W. BELKNAP,
Secretary of War.

OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D. C., February 8, 1873.

SIR: The following additional reports of examinations and surveys, made in compliance with the second section of the act of June 10, 1872, making appropriations for the repair, preservation, and completion of certain public works on rivers and harbors, &c., are respectfully transmitted herewith.

1. *Rouse's Point Harbor, New York.*—This harbor is naturally well protected on the east and north, but much exposed to southerly storms which prevail there, and the object of the improvement is protection from their effects. To this end the engineer officer in charge of this examination, Lieutenant-Colonel Newton, recommends interposing a breakwater in two sections between Windmill and Stony Points, the upper section to be about 1,900 feet and the lower 1,400 feet in length, to be of crib-work similar in construction to that at Plattsburgh, at an estimated cost of \$336,000.

2. *Swanton Harbor, Vermont.*—Swanton is a manufacturing town and a station of the Vermont Central Railroad, fifteen miles from Rouse's

Point and ten from Saint Albans. The junction of the Montreal and Vermont and of the Vermont Central Railroads is at this point. The village is two miles distant from the harbor on the lake, and has as yet no railroad connection with it, but on the completion of the Portland and Ogdensburgh Railroad, now being constructed, the harbor will be put in connection with the general railway system of that region. The principal demand for works of protection at this harbor refers, therefore, to a future development of commerce due to these connections with existing routes by rail and water.

The full project presented by Lieutenant-Colonel Newton, the officer of engineers in charge of the examination, consists of a breakwater of crib-work, similar to that at Burlington, 1,900 feet long, at an estimated cost of \$272,000. At first, and until the trade has become more fully developed, only a portion of this need be constructed, as it can be extended outwardly as the business of the place increases.

3. *Keyport Harbor, New Jersey.*—The improvement suggested here by the engineer officer in charge of this examination, Lieutenant-Colonel Newton, is deepening the approach to the Keyport wharf by dredging a channel 200 feet wide and about 4,700 feet long to a depth of 8 feet below mean low water, at an estimated cost of \$30,000.

The bed of the harbor in and near the main channel consists of clay and fine sand, and the maximum velocity of the tidal currents is not sufficient to affect the stability of the river-bottom. An improvement by dredging would therefore probably be of benefit for a long period.

4. *Survey of the Delaware River between Trenton, New Jersey, and Easton, Pennsylvania.*—A preliminary report of this examination was transmitted with my letter of the 11th January last, as printed in Senate Ex. Doc. No. 25, of the present session of Congress. The probable cost of the improvement of this portion of the river was there set down at \$20,000.

The revised estimates embraced in the report now submitted by Lieutenant-Colonel Kurtz increase the amount to \$26,000. This report shows the character and condition of the river between Easton and Trenton; the history and extent of the lumber trade upon it; the improvements heretofore made by State appropriations and personal efforts; the jurisdiction exercised by Pennsylvania and New Jersey over the river; their legislation respecting it, and the questions arising between the several interests concerned in its waters and along its shores.

The funds allotted for this examination from the appropriation of June 10, 1872, having proved insufficient, the engineer in charge acknowledges the assistance of a number of gentlemen living upon the river in supplying the deficiency, without whose aid the survey could not have been completed at this time.

5. *Survey of the bay and sound from Delaware line through Worcester County, Maryland, and Chincoteague Inlet, Virginia, with a view to an inlet at or near a place called "The Hommacks."*—A preliminary report of the results of this survey was forwarded with my letter of the 11th ultimo. In the final report now submitted, Lieutenant-Colonel Kurtz, engineer officer in charge, retains the former estimate of \$120,600, with the remark that it is at full quantities and prices to cover unfavorable circumstances. If these should not occur there will be a reduction of the expenditure. The question of the permanence of the inlet when made is discussed by Lieutenant-Colonel Kurtz in this report with the conclusion that it may be reasonably expected.

6. *Mouth of Mackay's Creek and harbors of Washington and Edenton, North Carolina.*—The improvement proposed for Mackay's Creek by the

engineer officer in charge of these examinations, Major Craighill, consists of the removal of the wreck of a small schooner and the dredging of a channel 60 feet wide to a depth of 7 feet from the mouth of the creek out until the same depth is reached in the sound, at a cost of \$5,000.

The proposed improvement for Edenton seems to be the excavation of a channel 100 feet wide and nine feet deep from the town to the deep water of the bay, at a cost of about \$10,000.

The obstructions to navigation near Washington, partly natural and partly artificial, are more serious than at Edenton or Mackay's Creek, owing to their extent and the cost of remedying the difficulties caused by them.

The estimates herewith given contemplate the removal of piles and sunken logs, dredging, and the construction of a long dike for contracting the too broad estuary below the town, and directing the flow of the water into the dredged channel of 9 feet in depth. The cost is stated to be about \$35,000.

The above-mentioned improvements would, it is believed, contribute greatly to the general good of that section of the country.

7. *Waukegan Harbor, Illinois.*—A harbor at this place must be entirely artificial, as the creek which here empties into the lake is of no value for harbor purposes. The commerce of the place is small, and from the accompanying report would not appear to warrant any expenditure for local purposes.

The engineer officer in charge, Major Houston, reports, however, that a harbor of refuge somewhere in this vicinity, affording easy access to vessels of all classes, would be of great benefit to commerce. The nearest harbors are Chicago, thirty-six miles south, and Kenosha, sixteen miles north; the latter not at present deep enough to admit vessels of the largest class. The nearest harbor north affording security to vessels of all classes is Milwaukee, distant fifty miles. There is, then, a length of coast of eighty-six miles where vessels of the larger class can find no shelter.

Waukegan may not, perhaps, prove to be the best locality for such a harbor; a careful examination of this portion of the lake-coast should be made with this view before any locality is fixed upon.

Major Houston estimates the cost of an exterior harbor of refuge at Waukegan to be about \$800,000.

8. *Mouth of Pensaukie River, Wisconsin.*—This river empties into Green Bay on the west side, about twenty-five miles from the mouth of Fox River. Vessels drawing 5 feet are now enabled to enter, owing to improvements made by owners of saw-mills near the mouth. An increase of this lepth would serve to develop the business of the place, and of the country adjacent.

The engineer officer in charge, Major Houston, reports that, to enable vessels usually navigating the lake to enter, the present depth may be increased by dredging, and when dredged, piers should be constructed to prevent the channel from filling up. These piers, owing to a reef one and a half miles north of the river-mouth, which breaks the force of storms, can be slab-piers, a cheaper construction than that usually resorted to. He submits the following estimates for this improvement:

For a 9-foot channel:

Dredging	\$63,000
Piers	59,000
Contingencies	12,000
Total	<u>134,000</u>

For a 12-foot channel:

Dredging	\$73,000
Piers	111,000
Contingencies	18,000
Total	<u>202,000</u>

9. *Survey for the removal of wrecks of gun-boats, steamers, and other obstructions placed in the Yazoo River during the war.*—Colonel Simpson, the engineer officer under whose direction this examination was made, reports the existence of nineteen wrecks which are obstructing navigation, and recommends the removal of eight of them as being the worst obstructions, estimating the cost at \$40,000.

The removal of the whole number would cost about \$95,000.

Very respectfully, your obedient servant,

A. A. HUMPHREYS,
Brigadier-General and Chief of Engineers.

Hon. W. W. BELKNAP,
Secretary of War.

I.—ROUSE'S POINT HARBOR, NEW YORK.

UNITED STATES ENGINEER OFFICE,
New York, January 20, 1873.

GENERAL: I have respectfully to make a report upon the survey and projected improvement of Rouse's Point Harbor, according to the requirements of the act approved June 10, 1872.

I transmit herewith copy of report and chart furnished by Mr. D. White, under instructions from this Office.

The object of the improvement was well understood to be the protection of vessels in the trade with Canada, and of vessels engaged in the local trade, from the effects of storms.

It is unnecessary to go into further detail, as the inclosed report of Mr. White will furnish the requisite information.

The position and lengths of the breakwater, as projected by Mr. White, are delineated in red. I have considered it proper to make a change in positions and lengths, and the breakwaters recommended are indicated in blue. Possible future extensions of the breakwaters are represented in blue dotted lines. I have omitted the estimate for dredging the Rouse's Point reef.

Estimate for breakwater.

Upper breakwater, 1,900 feet long	\$159,770 00
Lower breakwater, 1,400 feet long	132,405 00
Contingences, 15 per cent	43,826 25
Total	<u>336,001 25</u>

The upper breakwater is 20 feet wide, except for the last 200 feet toward the channel, where it is increased to 25 feet. The lower breakwater is 20 feet wide, except the last 300 feet, where it is 25 feet.

Respectfully submitted.

JOHN NEWTON,
Lieutenant-Colonel Engineers, Brevet Major-General.

General A. A. HUMPHREYS,
Chief of Engineers, Washington, D. C.

FORT MONTGOMERY, ROUSE'S POINT, NEW YORK,
January 6, 1873.

GENERAL: I have the honor to submit the following report of the examination and survey of Rouse's Point Harbor, New York, made in conformity with your instructions under date of August 5, 1872, with a view to the construction of a breakwater, and other improvements at this point, as a means of providing for the safety of vessels plying between ports on the Saint Lawrence and Lake Champlain, which enter and clear at this harbor, and those engaged in such transshipments as center at this locality.

Rouse's Point Harbor, or Port, lies at the west shore of Lake Champlain, about one and one-half miles above its confluence with the Richelieu River, water communication being made northward with the Saint Lawrence at Sorel, and southward with Whitehall, at the head of the lake. The harbor is thus at the foot of lake navigation, and in the natural commercial highway between the Hudson and the Saint Lawrence Rivers, with railroad connections to the north, south, east, and west.

While at this "outlet," on either side, are the "ports of entry" for the sixteenth collection district of New York, and that of Vermont. The harbor lies in a shallow bay, formed by Rouse's Point on the north, and Stony Point on the south, and with the Vermont shore on the east, embracing a length of coast of about two miles.

The lake along the harbor has a width of about one mile; its maximum rise above the plane of low water is about 7 feet, with a velocity at low water of 1,754 feet per hour; anchorage bottom good, being composed of clay, stone, sand, and gravel; the depth of water within the harbor is ample at all seasons of the year, except upon "Rouse's Point Reef," where it has a depth of only about $4\frac{1}{2}$ feet, and is thus too shallow to admit vessels of any size during the lower stages of the lake. This reef extends from Rouse's Point, in a southerly direction, for a distance of 1,700 feet, and has an average width of about 200 feet; it is apparently composed of clay, gravel, and stone, the latter varying from 10 to 150 pounds in weight, except that portion lying south of the railroad bridge, where the stones are somewhat larger and lie loosely, the clay having been washed out from between them. This section of the reef is very troublesome to vessels passing between the wharves and channel.

At the lower end of the harbor is the terminus of the Ogdensburgh and the Champlain and Saint Lawrence Railroad; here connection is formed between them, and the Vermont Central Railroad, by a bridge across the lake.

In this bridge, about 2,200 feet from the west shore, provision is made for the passage of vessels up and down the stream by the insertion of a rotary "draw," which, when out of position, (or open,) leaves a passage of 90 feet at either side of the central pier. At the west end of this bridge, and extending southward along the harbor, are the extensive wharves of the Ogdensburgh Railroad Company, and those owned by private parties, forming the principal wharfage facilities of this port, where the transshipment of freight is carried on between the railroads and the connecting lines of steamers and sail-craft; while above these, opposite Windmill Point, is located another wharf of considerable size, for the reception of coal and the transaction of local business.

This harbor on the east and north is naturally well protected, but is very much exposed to southerly storms, which are the prevailing ones in this locality.

The lake lies in nearly a right line north and south; is about one hundred miles in length, with a varying width, its greatest width being about twenty-three miles, south of Rouse's Point, from which point its shores gradually converge. The intervening islands not being sufficient to impede the violence of the storms, the volume of the lake sweeps down with increasing strength toward its outlet, where, on reaching the upper end of the harbor, the lake is abruptly contracted by the projection of Windmill Point from the east shore, the water set back by the bay thus formed on the right continually flanking the main volume at its egress, which, here concentrated from its greater magnitude southward, causes the waves to roll in upon the harbor with great force, rendering it impracticable for vessels to pass either way through the draw, or lie at the windward side of the wharves with any reasonable degree of safety. Consequently, during the prevalence of these southerly storms, vessels, sail-craft, and steamers, the latter each with its tow of barges or rafts, measuring from 500 to 200 feet in length, in coming from the north have to remain below the bridge, and those northward-bound, as well as those exchanging their cargoes in the harbor, are compelled either to seek shelter at the leeward side of the wharves, or run the risk of injury in passing the draw for that object, it being considered dangerous to lie at anchor, in a gale, above the bridge, all of which causes serious delay to commerce. Therefore, the main improvement required for this harbor is an increased depth of water upon that portion of Rouse's Point Reef lying south of the bridge, and protection from southerly storms of the draw and line of wharves along the harbor-front, and anchorage facilities to enable vessels to lie securely (at anchor) above the bridge while passing inspection at either custom-house, as well as in cases where the storm is too severe to admit of proceeding on their passage up the lake.

With this end in view, which the important interests of commerce would seem to

demand, after a careful consideration of the subject, I would respectfully recommend the following improvements :

First. Dredge out that portion of Rouse's Point Reef lying south of the bridge, to a depth of 8 feet below the plane of low water. This will require the removal of 11,200 cubic yards of stone, clay, &c., at 70 cents per cubic yard, \$7,840.

Secondly. Interposing 2,600 linear feet of breakwater in two sections between Windmill and Stony Points, the upper section to be 1,200 and lower 1,400 feet in length.

It is believed that by thus placing two breakwaters of the above lengths respectively at either side of the channel, one above the other, and slightly oblique to the axis of the waves, as shown in the accompanying map, that the waves will be broken and so deflected to the right as to secure the desired improvements, without at the same time producing any appreciable effect upon the natural discharge of the lake, or proving an essential impediment to vessels in passing out and in. It is proposed to build this breakwater of crib-work, similar in construction to that at Plattsburgh, the cribs to be 100 feet in length each, and 20 feet wide.

The estimated cost, including labor, is as follows :

379,080 cubic feet square pine-timber, at 33 cents	\$125, 096 40
78,000 feet, board measure, 3-inch pine-plank, at \$35	2, 730 00
249,600 pounds drift-bolts, at 7 cents	17, 472 00
5,200 pounds 6-inch wrought spikes, at 8 cents	416 00
24,960 tree-nails, at 8 cents	1, 996 80
33,644 cubic yards rubble-stone, at \$1	33, 644 00
	181, 355 20
Contingencies, 15 per cent	27, 202 80
Total	208, 558 00

Making the probable cost of the improvement \$216,398.

The following schedule shows the business of the harbor for the year ending December 31, 1872: Vessels passing through the "draw" and entered and cleared at either port, 7,155; tonnage of the same, 708,951; value of imports, \$3,170,136; duty probably accruing to the United States therefrom, \$500,000.

Steamers and sail-craft arriving at and departing from the harbor, southward, not passing the "draw," 2,000; freights transshipped at this port, 67,262 tons; value, \$2,367,525.

The foregoing is taken from the accompanying statistical report furnished by the Rev. D. T. Taylor, secretary of the Rouse's Point board of trade.

As this outlet lies within the limits of the collection districts of two States, with their respective ports of entry for foreign trade, Rouse's Point, and Windmill Point, at either side, the improvement proposed would be alike beneficial to each, and both general and national in its character.

Very respectfully, your most obedient servant,

D. WHITE,
Superintendent and Engineer.

Brevet Major-General JOHN NEWTON,
United States Engineers.

ROUSE'S POINT, NEW YORK, *January 6, 1873.*

DEAR SIR: In compliance with your request, I now furnish a statement of the trade and commerce of and touching at this port, together with an exhibit of the increase of the same during the last twenty-five years.

Since the era of the introduction of steamboats on Lake Champlain in 1809, there have been built on this water over thirty steamers; about one-half of these were first class, the remainder being second class, to which, if we add such vessels as come from Canada, it is probable the total steamboats that have navigated these waters would amount to the number of fifty. During the past season, three first-class steamers have made daily trips to this port from Whitehall, New York, and the travel on them has exceeded that of any previous season, while the amount of freight conveyed hither by them for the trade of Northern New York is very considerable. Besides the above regular line boats, the lake is navigated at the present time by a score of second-class steamers, side-wheel and propellers, engaged in transporting freight, and conveying hundreds of canal-boats and barges freighted with lumber and merchandise to and fro, forming the immense and increasing carrying-trade of the lake. The whole number of vessels of all descriptions now operating in the commerce of the lake is nearly seven hundred. These vessels land at this port, or pass and re-pass the draw of the great bridge, between eight thousand and nine thousand times during the

season; the passage of single cargoes sometimes reaching six hundred per month while the total tonnage of vessels engaged in the commerce and carrying-trade on these waters is from 10,000 to 12,000 tons.

From Ottawa and Montreal to Albany and New York, a distance, in the extreme, of over five hundred miles, exists an unbroken water communication. On this long route all vessels inward or outward bound are compelled to pass, to clear or enter at this outlet of Lake Champlain. Very fitly has this outlet been styled "the key of Canada." Vermont has her custom-house at the draw, and of the entire district of Champlain, extending westward nearly one hundred miles, and southward a similar distance, full seven-eighths of all the duties are collected at the Rouse's Point port of entry. The commercial importance of this locality is, therefore, at once perceived. Every day over thirty vessels pass the custom-houses on either side of the draw. Endless stores of Canadian lumber are almost continually in sight. Burlington, Vermont, third in magnitude in its lumber interests in our country, receives all her lumber by the way of this outlet. Each and every vessel coming from any or every direction, while making the passage of this port, is compelled to lie to in an exposed harbor, at present totally unprotected by artificial improvements.

Commerce on this route is year by year increasing, and a comparison of statistics of different dates will serve to show the rate of this increase. For example, in 1852 there were 342 vessels, of 22,538 tons, entered at Rouse's Point, and a far less number on the Vermont side; but in 1871 there were 3,072 vessels, of 259,460 tons, entered at the two ports that lie either side of this outlet, and this last number was increased by over 500 vessels during the following year, while the facts exhibit a satisfactory increase of United States over Canadian vessels, and thus a greater transfer of commerce to American bottoms.

Again please observe that in 1858 there entered into the Champlain district from Canadian waters 1,100 vessels, of 78,256 tons; into the Vermont district, 631 vessels, of 42,099 tons; total, 1,731, of 120,355 tons. But ten years later, in 1868, there entered into the Champlain district from Canada 1,897 vessels, of 149,263 tons; and into the Vermont district, 942 vessels, of 70,267 tons; total, 2,839 vessels, with a tonnage of 219,530 tons; an increase both in vessels and tonnage of 80 or 90 per cent. But three years later the vessels entering at both ports had increased to 3,072, and their tonnage ran up to 259,460 tons, an increase of tonnage of over 100 per cent. beyond the year 1858, while in a single year, ending 1872, both the size and number of vessels had largely increased.

Noticing more especially the last two years, we find the figures of commerce touching at this harbor to be as follows, namely: the number of American vessels that entered and cleared at the Champlain district during the season of 1872 was 2,507; British or Canadian vessels, 1,422; total, 3,929, with an aggregate tonnage of 291,313 tons; while on the Vermont side there were entered and cleared 3,226 vessels, of 417,638 tons, showing a total of 7,155 vessels, with a capacity of 708,951 tons. We have here, both in carrying and going, an increase of over 1,000 vessels beyond the year 1871, with a corresponding increase of tonnage.

The total value of the imports of the vessels inward-bound amounted to over \$3,100,000, and the revenue accruing to the Government therefrom was about half a million of dollars, (which please compare with the fact that for a period of twenty years previous to 1848 the gross revenues of both ports did not much exceed an average of \$10,000 per annum.)

In conclusion, you are invited to consider that nearly 33,000 tons of iron and ore were landed at our wharves in 1872, which is an increase of nearly 20,000 tons in one year; that from 10,000,000 to 12,000,000 feet of lumber were shipped from our wharves the past year, where five years ago none was shipped; that the local trade in coal reaches 5,000 tons, whereas five years ago it did not amount to 500 tons; and finally, that the freight of all kinds brought into, and conveyed out of, our harbor is fairly estimated, in the aggregate, to annually amount to over 67,000 tons, having a value of several millions of dollars. (See schedule and other documents accompanying this statement.)

I beg leave to remark, as a final conviction, that there touches and radiates from this port such vast commercial and moneyed interests, both public and private, and involving a wide-spread community of persons, as calls for every needful protection by the Government, into whose treasuries flow large revenues derived therefrom.

I am, very respectfully, yours,

DANIEL T. TAYLOR,

Secretary of the Board of Trade, Rouse's Point, New York.

DAVID WHITE,

Civil Engineer.

SCHEDULE OF BUSINESS.

The following schedule exhibits the statistics of the business in commodities, tons,

and value of freight loaded and unloaded at the wharves and depot of this port, and also the lake commerce in transit, during the year 1872;

Articles.	Estimate of tons.	Value.
Clapboards received and shipped, 200,000	65	\$2, 200
Lumber manufactured from log, 100,000 feet	200	2, 000
Lumber received (by Velie & Co.) and shipped, 410,500 feet...	600	8, 200
Shingles manufactured, and in part shipped south, 2,000,000..	240	7, 000
Laths received and shipped, 8,500 bundles	250	2, 100
Hay unloaded from cart and car for transportation south and east	905	13, 575
Soap manufactured and sent away by boat and rail	100	35, 000
Lumber received (at the yard of R. W. Adams & Co.) for ship- ment south and east, 7,200,000 feet, (96 cargoes)	15, 000	100, 000
Lumber received by boat (at the yards of J. R. Booth) and shipped south, 3,176,004	6, 616	63, 500
Hay unloaded from vessels for transportation by cars, 12 cargoes	1, 370	20, 550
Coal (by Messrs. Myres & Crook) for steamboat, railroad, and local use, unladen from vessels	5, 000	35, 000
Coal unloaded from lake vessels for transportation by cars going west	700	4, 900
Merchandise of dry-goods, provisions, groceries, drugs, hard- ware, &c., received mostly by boat, for local trade	275	126, 000
Merchandise shipped southward on lake steamers, the same having been brought from Canada by rail	245	122, 500
Merchandise unloaded from lake vessels for transportation by cars to the west	1, 423	711, 500
Merchandise unloaded from lake steamers for transportation by rail to Canada	1, 573	786 500
Iron and iron ore received, from lake vessels and reloaded in cars going west	32, 700	327, 000
Total	67, 262	2, 367, 525

D. T. TAYLOR,
Secretary Board of Trade, Rouse's Point, New York.

APPENDIX.

Vessels entered and cleared that pass through the "draw," 7,155; tonnage, 708,951.

Value of the total imports received from Canada, \$3,170,136.

Duty, probably collected by United States on the above, \$500,000.

Steamers and sail-vessels arriving and departing to and from the harbor of Rouse's Point which do not pass the draw but load and unload at our wharves, 2,000.

D. T. TAYLOR,
Secretary Board of Trade, Rouse's Point, New York.

FORT MONTGOMERY, ROUSE'S POINT, NEW YORK,
January 28, 1873.

GENERAL: In pursuance of your letter of the 18th instant, I have the honor to report that application was made to the collector at Rouse's Point for the information called for in your communication, which was given as far as he had records to show. This, however, not answering fully in regard to the number of passages made by domestic vessels engaged in the coasting trade with Rouse's Point and other home ports, with tonnage and merchandise, application was immediately made to the superintendents and secretaries of the several transportation lines for the desired information, but the statements thus received are not as full as your letter calls for, owing to want of time to collect the data, especially in regard to values.

* * * * *

In aggregating these several statements the following results are obtained, viz :

The number of passages made by vessels trading between Canada and Rouse's Point :

Vessels entered and cleared, 3,929 ; tonnage, 2,913.03.

Value of cargoes, \$3,137,529.

Number of passages made by domestic vessels engaged in coasting trade with Rouse's Point and other home ports, with tonnage and merchandise, as far as given :

Domestic and freight goods arriving by vessels and exported via Grand Trunk Railway, \$157,125.

Vessels departing from and arriving at Rouse's Point, 3,749 ; tonnage, 867,570.

Value not stated.

Very respectfully, your most obedient servant,

D. WHITE,
Superintendent and Engineer.

Brevet Major-General JOHN NEWTON,
United States Engineers.

II.—SWANTON HARBOR, VERMONT.

UNITED STATES ENGINEER OFFICE,
Houston and Greene streets, New York, January 21, 1873.

GENERAL: In conformity with the provisions of the act approved June 10, 1872, I have respectfully to forward map of survey of Swanton Harbor, Vermont, with copy of report of Mr. D. White, civil engineer with the inclosures named therein.

By the inclosures aforementioned it will be clearly perceived that the principal demand for works of protection at this harbor refers to a future development of commerce due to the proposed completion of the Portland and Ogdensburgh Railroad, and its connections with existing routes by water and by rail.

The general position and length of the breakwater, as designed by Mr. White, fulfill the required conditions.

The necessary slight changes and deviations therefrom could with propriety be made hereafter, in case Congress should make the necessary appropriations.

It would be highly proper, if not essential, to require the parties interested to construct first the uppermost wharf, and then to commence the breakwater at the point nearest the shore, building it only so far year by year as would be necessary to cover the wharves as they are built in regular order from the first position as above described.

Estimate.

For 1,900 linear feet of breakwater.....\$272,160

Respectfully submitted.

JOHN NEWTON.

Lieutenant-Colonel Engineers, Brevet Major-General.

Brigadier-General A. A. HUMPHREYS,
Chief of Engineers, Washington, D. C.

FORT MONTGOMERY, ROUSE'S POINT, NEW YORK,
December 27, 1872.

GENERAL: I have the honor to submit the accompanying maps, marked A, B, and report of a survey of Swanton Harbor, Vermont, made in compliance with your instructions, dated August 5, 1872.

Swanton Harbor is situated at the left shore of an arm of Lake Champlain, lying east of Alburgh Tongue. This arm has its entrance at a point twelve miles above the

outlet of the lake, and extends, in a northeasterly direction, across the northwest corner of the State of Vermont, for a distance of eighteen miles, and has a width varying from four to five miles, except for a short distance, at a point seven miles above its entrance, where, by a peninsula known as "Hog Island," extending from the eastern shore, it is reduced to about one mile in width. The extreme points of the head of this peninsula extend a considerable distance above and below its neck, and form, together with the main-land, deep semicircular bays at either side, the one on the right being known as "Missiscoi Bay," and that on the left, and facing the entrance of the arm, "Maquam Bay." Here, at the foot of Maquam Bay, and extending along the main shore, in a southerly direction, lies the harbor. The harbor is thus naturally well protected on the north and west, but exposed to southwesterly storms, and it is here at its upper end that the construction of a breakwater is sought, to give to the harbor the additional security it thus requires.

The wharfage facilities for the last twenty-five years consisted of one small dock at its lower end, which, however, during my survey in September last, was being superseded by the construction of a more substantial one, 170 feet in length and 60 feet in width, which, I was told by the engineer in charge, was the first one of a series of docks which the Portland and Ogdensburgh Railroad Company proposed to construct here, should the commerce of the harbor sufficiently increase to require them, the position and figure of which may be seen by a reference to map A, of the maps A and B, herewith transmitted.

The harbor abreast of the proposed wharves has a good depth of water; the bottom is composed of stone, clay, sand, and mud, and the channel from the harbor to the main lake is said to carry a minimum depth of 17 feet. Below the wharves, however, and extending to the bottom of the bay, is an extensive alluvial deposit, rendering the water too shallow for purposes of navigation during the lower stages of the lake. This shoal or flat is an accumulation of silt, brought down many years ago by Charcoal Creek, which formerly debouched in at the bottom of the bay, but which long since became extinct.

The harbor is thirteen miles distant from the main commercial channel of the lake, and is thus accessible to vessels from all points. The shore along the harbor, and extending southward for several miles, is bold and firm, being composed of rock, stone, and clay and gravel, and the adjacent lands have a good elevation above the plane of the lake, and receding from the shore with a slight acclivity, and well adapted to either agricultural or commercial purposes.

The town of Swanton, from which the harbor derives its name, is situated inland about two miles east of the harbor, upon the north bank of Missiscoi River. This river takes its rise in Canada, at the northeast corner of Franklin County, Vermont, and from thence, flowing in a southwesterly direction, through the towns of Richford, Enosburgh, Sheldon, Highgate, and Swanton, empties its waters into Missiscoi Bay, the stream at Swanton and several points above it affording some very fine mill-sites. Swanton is a manufacturing town, and a station of the Vermont Central Railroad, between Rouse's Point and Saint Albans, being distant fifteen miles from the former and ten from the latter. The junction of the Montreal and Vermont and Vermont Central Railroads is also made at this point, but as yet, however, it has no railroad communication with the harbor, which latter, although an old port, has hitherto had but a limited local business. But on the completion of the Portland and Ogdensburgh Railroad, now in process of construction, it will be put in connection at Swanton with the Vermont Central, and thence, with the general railway system of the country, which, together with the full development of the other projects set forth in the certified statement herewith transmitted, ought to make this an important commercial center. These projects, however, are not sufficiently developed to require such extended improvements as may be in future desired, as may be seen by reference to Map A. To cover the whole series of docks will require 1,900 linear feet of breakwater.

It is therefore respectfully proposed to give to the harbor the protection it needs; but in view of the contingency involved, to request of the railroad company that they develop their series of docks from the upper instead of the lower end of the harbor, and to commence the breakwater at its shore (east) and only extend it outward as the business of the harbor may hereafter require.

It is proposed to build this breakwater of crib-work similar in construction to that at Burlington, Vermont. The cribs to be 100 feet in length each, and 25 feet in width; the estimated cost of which, including labor, is as follows:

For 1,900 linear feet of breakwater completed:

492,622 cubic feet square pine timber, at 33 cents.....	\$162,565 26
57,000 feet (board measure) 3-inch pine plank, at \$35.....	1,995 00
257,450 pounds drift-bolts, at 7 cents.....	18,021 50
3,890 pounds 6-inch spikes, at 8 cents.....	304 00

40,432 tree-nails, at 8 cents	3, 234 56
50,540 cubic yards rubble-stone, at \$1.....	50, 540 00
	236, 660 32
Contingencies, 15 per cent	35, 499 68
Total.....	272, 160 00

Swanton Harbor is in the collection-district of Vermont. Fort Montgomery, at the outlet of Lake Champlain, is the nearest fort, and the nearest light-house that at Windmill Point.

Accompanying this report is a communication from A. B. Jewett, esq., of Swanton, Vermont, containing a statement of the business of Swanton and Swanton Harbor for the year 1872.

Very respectfully, your most obedient servant,

D. WHITE,
Superintendent and Engineer.

Brevet Major-General JOHN NEWTON,
United States Engineers.

Business interests depending upon the construction of a breakwater at Maquam Bay.

The undersigned, citizens of Vermont and in part of Maine, upon the above topic, respectfully set forth as follows :

Of the adaptation of Maquam Bay to the purposes of commerce, in its accessibility from the main lake, its depth of water, its conveniences for docks, in the favorable shape of the bordering land with reference to the storage of merchandise and the location of a town, it is not necessary for us to speak, the same having been duly set forth in the report of the United States engineer under whose direction the survey of the harbor has been made. In the same report the necessary information is embodied, touching the breakwater, for which appropriation by Congress is sought, and which is indispensable for the protection of shipping at this point.

It remains to show what important business interests will be subserved by the proposed expenditure, by the establishment of a good and safe haven for shipping at the locality proposed. These interests are an important part now existing and in urgent demand of improvement sought. In part they are prospective and are to result from the development of resources now dormant or inadequately used. This development will itself be variously initiated or promoted by the harbor improvement in view. Either one of the classes of interests specified is believed to be of sufficient importance to justify and require the appropriation desired.

COMMERCIAL POSITION.

We observe at the outset that the harbor in question has an exceptionably important commercial position. It is located at the point where Lake Champlain, having divided the country asunder for one hundred and fifty miles to the southward, first permits the passage of railroads east and west. By and at this point, over half of New England will gain most convenient access to the West, and a vast territory in the West find its shortest route to the sea. At this point, accordingly, railroads are already concentrated from the north, south, and west, to which one from the east, another to the north, and still another to the west, will speedily be added. This is, in short, a great natural railroad center. A large amount of merchandise already passes and re-passes by rail at this point, the bulk of which must continue to rapidly increase.

The line of railroad leading east from Maquam Bay, through which access to a territory at present unfurnished with railroads is to be secured, and shortest access to the ocean, namely, the Portland and Ogdensburgh Railroad, has now one hundred and twenty miles of the total two hundred and twenty-six in operation, and work vigorously prosecuting upon the unfinished portion. Abundant means are provided to complete the road, which will be opened through at an early day. This line is to be extended westward, from Maquam Bay to the Great Lakes, and north to Montreal, charters already being secured and the money, in part, raised. It will embrace upon the lake, at Maquam Bay, with all needed facilities for receiving, handling, storing, and forwarding freight. By this line merchandise and produce drawn from the country contiguous to the Great Lakes, transferred to rail at Maquam Bay, can reach a large territory on the east and southeast, at lower cost than by any other route, and can also reach tide-water for distribution coastwise and beyond sea, on terms competing with the cheapest.

From Maquam Bay to Portland, Maine, is but two hundred and twenty-six miles, which measures the length of land transportation from Chicago, Duluth, and other lake ports to the Atlantic by this route.

The other great line of railroad which controls the routes at present in operation, south, west, and north, from Maquam Bay, the Vermont Central Railroad affords additional outlets to an extensive territory. This line, also, will extend its rails to the docks, at Maquam, and will transact a portion of its Lake Champlain business at this point. It will be for its interest to do so, rather than wholly at Burlington, and for the interest of the commerce likewise, as greater dispatch can be secured.

Yet, further, the great water system of the Saint Lawrence, including some two thousand five hundred miles of navigable lake and river, is already connected with Lake Champlain by river and canal, a canal of far greater capacity being in prospect. This places Maquam Bay in connection, by water transportation, with a million square miles of productive country tributary to the Great Lakes, the Saint Lawrence and its affluents.

Maquam has connection, also, with the Hudson River through the canals, and connection in consequence by water with New York and other tide ports. This is in fact a natural distributing point, lines of rail from an extensive area finding here their only practicable passage, and water-lines extending north and south, and at a short remove, east and west likewise, to the ocean and the head of the Great Lakes.

Having thus briefly noticed the important commercial position and advantages of the port in question, we proceed to remark in detail upon some of the branches of industry that would be prosecuted at this point, suitable harbor protection being secured.

LUMBER.

Some 240,000,000 feet of lumber are cut yearly at Ottawa and Hull, in Canada, or including the Gatineau, and various points to Grenville, 303,000,000 feet. Of this about 190,000,000 feet are brought into the States, much the larger part through Lake Champlain. Burlington receives yearly about 120,000,000 feet, mainly from this source of supply. An important part of this lumber can reach the consumer most directly and cheaply by transfer from barge to rail at Maquam Bay, avoiding circuitous routes.

As destined to towns upon the New England sea-board, the line via Maquam and the Portland and Ogdensburgh Railroad and connections becomes an equal competitor with any other. Unquestionably a large lumber trade will be established at this point should the harbor be made safe for shipping. The land inshore is disposed, without grading, filling, or other preparation, for the reception and convenient handling of an indefinite amount of bulky commodities, space for which has usually to be made ready at large outlay.

It is intended to establish at once a very large mill for "finishing" lumber at Maquam. A party already extensively engaged in the business elsewhere having it in view to remove to this point, as the best point known to him, a charter of a manufacturing company has just been procured from the Vermont legislature by a combination possessed of ample means, who likewise propose large operations in lumber, or some other branch of manufacture, at the same point.

COAL.

Coal can be laid down at Maquam Harbor as at Burlington for \$1.75 per ton for freight from the coal ports of the Hudson River.

The coal will circulate from this point as far east as the White Mountains, also via the southeast counties railroad connection, through a considerable territory in Canada. Coal is coming to be largely used, even in the rural districts, for domestic purposes, wherever railroads are opened within the distance of ten miles, the extreme severity of the winter in these high latitudes making the permanent and lasting fuel of peculiar value.

Manufactories, moreover, in the territory referred to, are constantly springing up or enlarging, and calling for larger supplies of coal in consequence. The single town of Saint Johnsbury consumes 5,000 tons yearly, including the Fairbanks scale-works, all of which will come in by Maquam and the Portland and Ogdensburgh Railroad.

The Saint Albans Iron-Works alone will use 30,000 tons per year, and the town 8,000 more, which will reach the yards via Maquam Harbor and the Vermont Central Railroad.

The town of Swanton consumes about a thousand tons of coal per annum. Cheaper fuel will stimulate industries in the great territory in question, and enlarge the resources of the communities in occupation thereof.

IRON.

The supply of iron to the same area of country will be drawn through Maquam port and the lines of rails thence radiating. This will be true whether the stock be of

home or foreign manufacture, whether New York or Montreal be the market in which it is purchased.

The Fairbanks scale-works, at Saint Johnsbury will transport by this route the greater portion of the 7,000 tons of home and foreign iron annually consumed by them. The Saint Albans works will use the same route for their yearly consumption of 3,000 tons.

Until within a few years, charcoal-blast iron has been produced at Swanton, Vermont, in close proximity to Maquam Bay. The Portland and Ogdensburgh Railroad opens districts in Vermont where fuel is procurable at \$2.50 per cord, so that this branch of manufacture could probably be re-established for the production of fine qualities of iron, at least to some extent. The Lake Champlain ores turn out an excellent quality of iron.

SALT, PLASTER, ETC.

The salt of Liverpool and Syracuse, whether by way of Quebec or New York, will find its way by Maquam port into the territory referred to. The amount is large, embracing supplies for cattle and live stock, for dairying, pickling meats, domestic uses, &c.

Plaster will likewise come the same way, which already is used quite largely, and will be extensively for the renovation of grass-lands in the district in question. The town of Swanton alone uses 100 tons yearly. There is a great quantity of hemlock-lumber on the Portland and Ogdensburgh Railroad, which affords means for tanning on a great scale. Whether the hides are brought in, or the bark carried out, an important business from this source is anticipated; large tanneries are already in operation on this road.

EXPORTS.

Among the heavy, bulky articles that will find their way to market by water from Maquam Bay is lime. Quarries of this, of the finest possible quality, are situated in the town of Swanton, near the port. Some sixty thousand barrels are burned yearly. The product will be indefinitely increased, with lake transportation furnished close at hand. One concern received orders for 20,000 barrels over its ability to supply this season.

Marbles are manufactured largely in Swanton, the raw material being derived in part from islands in Lake Champlain, and in part from quarries in the town. Floor-tiles are turned out in large amount, as also table-tops, panels, fire-places, and other ornamental manufactures of marble. These productions can be profitably quadrupled if lake transportation can be secured. The tiles are used extensively in custom-houses, in the Department buildings at Washington, in banks, hotels, and first-class dwelling-houses, in all parts of the country.

On the line of the Portland and Ogdensburgh Railroad are two or three mines of soap-stone, which have been worked considerably, notwithstanding their distance hitherto from railroads; these could find cheap transportation, via Maquam, to market. The same holds true of a valuable hone-stone upon the same railroad, of an excellent quality, and already quite largely used. Also, a deposit of ocher; of one copper-mine, worked sufficiently to demonstrate its abundance and excellence, but hitherto far removed from facilities of transportation. The granite of Hardwick, on the same railroad, is one of the most beautiful building-stones in the world. There will be a considerable export of potatoes by barge from the harbor proposed, and more or less of other bulky agricultural products.

PASSENGER BUSINESS.

One hundred thousand passengers are moved yearly on Lake Champlain by a single line of steamers. To these, and to the tourists and pleasure travelers from Saratoga and Lake George, a route shorter by seventy miles than any now existing would be opened to northern Vermont and New Hampshire, to Mount Mansfield, and the White Hills, by a harbor at Maquam, enabling steamers to make regular calls and to make regular connections with railroad-trains at that point.

CAUGHNAWAGA CANAL.

Should this short cut of twenty-nine and one-half miles length and 25 feet lockage be made from the Saint Lawrence to Lake Champlain, propellers of nine hundred tons capacity could, upon the enlargement of the Welland Canal, now in progress, pass from Chicago, Duluth, and other lake ports, into Lake Champlain, and break bulk at Maquam docks, two hundred and twenty-six miles from tide-water. This is not advanced as a formal argument in the discussion, but only as an incidental consideration.

The canal will unquestionably be constructed, but, perhaps, not for some years, and, so far as regards the business to be derived from it, delay could be without detriment made in harbor improvements on Lake Champlain. When constructed, every line of rail leading from the lake to tide-waters will need the most ample port accommodations to transact the business that will be offering.

MISCELLANEOUS CONSIDERATIONS.

Maquam is an old port. More or less lake business has been done here for many years, notwithstanding the deficiency of proper facilities. Thirty-five years ago, indeed, a wharf was built to accommodate the traffic that was attracted to the port by its convenience to the back country, the good depth of water, &c. This during the past season has been re-established, steamers have begun to make calls thereat, and so soon as the harbor is properly protected a line of first-class lake steamboats will ply forth and back betwixt Maquam and other lake ports, arrangements to this effect having been completed with a company of ample means.

The concentration of railroads at this point, already effected, and to be speedily enlarged, as before specified, has increased indefinitely the value of the harbor as a convenient point of transfer from water to rail and rail to water, for a great extent of country. Upon these facilities, the outgrowth of a recent time, the argument for the appropriation by Congress is, to an important extent, vested. These, so widely extended in their scope, preclude the objection that the improvement is merely local or State interest, for, even as matters now stand, the business concerned is not merely inter-State but international.

The appropriation sought is not of doubtful character. The policy of harbor improvements on inland waters has become fixed in the traditions and practice of the Government. Nothing more is asked for Maquam Bay than was, many years ago, done for Burlington Bay. If the sum is granted, the total expenditure made by the Government on account of navigation on the coast of Vermont will foot up thousands, against millions of dollars for other single New England States.

Vermont regards this harbor one of her valuable resources, so to speak, from the improvement of which Maine and New Hampshire likewise will receive material advantage to their railroads and business.

Vermont desires only that the General Government will do for her in small measure what it has done in overflowing measure for other States, and what properly belongs to it to do in virtue of its jurisdiction over the waters of Lake Champlain. For the rest, private and corporate capital and enterprise will be responsible; will construct all required wharves, docks, and store-houses; will furnish all necessary equipments for the transaction of a large business; and will see to it that, for every dollar of the nation's money spent there, the nation shall be enriched tenfold.

All of which is respectfully submitted.

III.—KEYPORT HARBOR, NEW JERSEY.

UNITED STATES ENGINEER OFFICE,
New York, January 18, 1873.

GENERAL: I have respectfully to forward a report and chart of Keyport Harbor, New Jersey, in compliance with the provisions of the act of Congress approved June 10, 1872.

Through Keyport Harbor many of the products of the rich farms of the townships of Raritan, Mattawan, Marlborough, Holmdel, South Amboy, Middletown, and Atlantic find their way to market.

The survey of Keyport Harbor embraces, besides the topography of the shores, the hydrography to the 9-foot curve. Borings were likewise made to establish the character of the bottom.

The bed of the harbor in and near the main channel consists of clay and fine sand. The maximum velocity of the tidal current is 0.50 knots per hour, which is inadequate to affect the stability of the river-bottom.

The channel has already been improved, as I am informed, by dredging, six years ago, to a depth of 6 feet at mean low water, and but slight filling of the channel since the dredging is now perceptible.

The draught of the larger vessels frequenting the harbor being 6 feet, and the fall of the lowest tide observed below mean low water being 1.3 feet, the improvement of the channel would require a depth of 8 feet at mean low water to be obtained and kept.

The harbor is protected, by its conformation, from easterly winds, but is exposed to the waves in northerly gales; the distance, however, to Staten Island not being sufficient, it is thought, to form waves of height sufficient to act upon the bottom.

An improvement by dredging would probably be permanent, or would benefit commerce for a long period.

I transmit herewith a tabular statement of vessels engaged in the commerce of this port, and of the value of the cargoes transported.

The survey was made by Messrs. A. Zoller and A. Doerflinger; the plotting by Mr. Charles L. Meyer, all under the direction of Mr. Julius H. Striedinger, civil engineer.

Estimate.

Dredging a channel 200 feet wide, about 4,700 feet long, to a depth of 8 feet below mean low water:

53,000 cubic yards of clay and fine sand, at 50 cents	\$26,500
Engineering, including buoying out of improved channel, and contingencies,	
15 per cent. of the above	3,975
Total	<u>30,475</u>

Keyport Harbor is situated in the Perth Amboy collection district.
Respectfully submitted.

JOHN NEWTON,
Lieutenant-Colonel Engineers, Brevet Major-General.

Brigadier-General A. A. HUMPHREYS,
Chief of Engineers, Washington, D. C.

United States Navy.

IV.—SURVEY OF THE DELAWARE RIVER BETWEEN TRENTON, NEW JERSEY, AND EASTON, PENNSYLVANIA.

UNITED STATES ENGINEER OFFICE,
Philadelphia, Pennsylvania, January 27, 1873.

GENERAL: I have the honor to forward herewith the papers relating to the survey of "the Delaware River between Trenton and Easton." They consist of the detailed report of the engineer in charge of the survey, Mr. M. Merriman, and an estimate of the probable cost of the improvements proposed, inclosed herewith, and of eight sheets of maps of the river, inclosed in a tin case and transmitted by express. These papers are so full and complete that the subject requires very few words from me.

Mr. Merriman's report presents fully the history, character, and condition of the river between Easton and Trenton; the history and extent of the lumber business upon it; the improvements heretofore made by State appropriations and personal efforts; the legislation of Pennsylvania and New Jersey, through a series of years; the jurisdiction exercised by the States over the river, and the questions arising between the several interests concerned in the waters and along the shores of the river. The map and charts afford abundant information respecting the position and character of the existing difficulties, and the remedies proposed.

The information embodied in these papers is more than the funds available for the survey could have afforded, without aid from other

sources. This has been largely and courteously supplied by a number of gentlemen living along the river shores, from Easton to Philadelphia. The United States are indebted in this respect to Mr. A. Mitchell, secretary Lehigh Coal and Navigation Company; Mr. J. A. Anderson, superintendent Belvidere Delaware Railroad; Mr. Ashbel Welch, chief engineer Pennsylvania Railroad, and to others, to whom Mr. Merriman refers in his report.

Very little interest was found to exist in the region of the survey in its objects. Some of the raftsmen manifested some interest in the improvements of the navigation. Captain L. B. La Barre, one of the most experienced river men, was an exception to the general rule. He visited Philadelphia, when the work was about commencing, gave abundant information, and was the pilot of the survey during the continuance of the field operations. He is regarded on the river as among the most skillful and intelligent persons engaged in rafting. This survey was provided for by "An act making appropriations for the repair, preservation, and completion of certain public works on rivers and harbors, and for other purposes," (general nature 134,) approved June 10, 1872, and was placed in my charge by your instructions June 19, 1872.

The expenditures on the work have been—

For field-work, materials, &c.	\$416 75
For field-work services	1, 325 00
For office-work	918 29
Contingencies	78 20
Total cost of survey	<u>2, 738 24</u>

Very respectfully, your obedient servant,

J. D. KURTZ,
Lieutenant-Colonel of Engineers.

Brigadier-General A. A. HUMPHREYS,
Chief of Engineers United States Army, Washington, D. C.

UNITED STATES ENGINEER OFFICE,
1328 Chestnut Street, Philadelphia, Pennsylvania, January 2, 1873.

SIR: Agreeably to your instructions of August 5, 1872, I proceeded at once to Easton, Pennsylvania, and began the survey of the Delaware River between that place and Trenton, New Jersey. My party consisted of Mr. F. F. Weld, assistant engineer, and Captain L. B. La Barre, a thoroughly informed steersman, who acted as pilot; a recorder, and two boatmen. We proceeded down the river, making detailed surveys of the falls and rapids, where obstructions to navigation existed, and reconnaissances of the remaining rapids, with the intervening reaches of the river.

Our work at times was rendered difficult and unsatisfactory by the high stage of water which prevailed, and accordingly, after finishing the examinations at Trenton, we returned to Easton on October 7, and were enabled, by running over the river again, to collect much information previously neglected. The field-work being thus finished in the space of little more than two months, Mr. Weld and myself returned to Philadelphia on October 16, and began the preparation of the maps and estimates. I now have the honor to present to you my report, giving in detail the information I have been able to collect concerning the regimen and navigation of the river, and proposing a scheme for its improvement, with an estimate of its probable cost.

Although my survey of the Delaware River was confined to that portion between Easton and Trenton, yet it seems necessary, in order to form a clear idea of the navigation between those places, that I should give here a short sketch of the river as a whole, or at least of that portion of it lying above tide-water at Trenton.

The Delaware River has its sources in Greene, Schoharie, and Delaware Counties, New York. The main or Mohawk branch has its origin in a small lake near the border of Schoharie County, at an elevation of 1,886 feet above the sea-level.* Following

* McCullough's Geographical Dictionary, vol. 1, p. 739.

the devious windings of the river, the distance to tide at Trenton is about two hundred and thirty miles, and the average fall per mile 8.2 feet. The main branch runs, at first, southwest fifty miles to the line of Broome County, within ten miles of the Susquehanna River, then suddenly turning to the southeast meets twelve miles below the east branch, or Popacton, which rising fifty miles to the northeast runs nearly parallel to the first. From the junction of the two the river proceeds sixty miles in a winding course, receiving from the right the Lackawaxen, and from the left the Neversink Creek. At its junction with the Neversink at Carpenter's Point, it turns to the southwest along the base of the Kittatinny Mountains about thirty-five miles until it passes by the breach called the Delaware Water-Gap; then southerly thirty miles, receiving at Easton the Lehigh from the right, and a few miles below the Musconetcong from the left, until it there passes the gap in the South Mountains; then pursuing a southeast course for fifty miles, it again, at Bordentown, changes its direction and runs onward through the Delaware Bay to the ocean.

The length of the entire river is usually given at three hundred or three hundred and ten miles, and its drainage area at eleven thousand two hundred and fifty square miles.* I have made a computation of the drainage area above Trenton and find it to be six thousand nine hundred and fifty square miles. Assuming the rain-fall and evaporation over both these areas to be the same, it appears that three-fifths of the entire discharge of the river comes from the region lying above tide-water at Trenton.

A sketch of the river system of the Delaware, which I present in Appendix A, p. 38, shows at a glance the drainage area above Trenton, and exhibits the relative rise and importance of its numerous tributaries. It will also be of service when I come to treat of the lumber trade and navigation of the river.

The general topographical features of the Delaware have been so well described by Professor Rogers† that I cannot do better than give here his own words:

"This noble river exhibits along its immediate valley a considerable variety of topographical feature and scenery. From its head streams in New York to where it emerges from the Pokono or Catskill Mountains it flows in a tortuous course through a deep trough in that elevated table-land. The mean level of the plateau remaining constant and the valley growing progressively deeper; the river-hills grow higher and higher as it descends. Meandering much more than the valley containing it, the river sweeps sometimes close by the base of the bounding hills, the lower part of which are, in many cases, faced by high, naked cliffs, exposing the red, brownish shales of sandstones of the district. The perspective of jutting and retreating hills, clothed with a combination of coniferous and deciduous forest to their summits, and washed at their base by long, bending reaches of the broad river, is very attractive, notwithstanding a prevailing sameness in general feature. After leaving the plateau in Pike and Wayne Counties the river emerges into a broad, open valley wholly different in structure and aspect from that which it has left. The waters which carved a way for it seem to have been impelled in their momentum southward with great energy against the strong, stony barrier of the Kittatinny or Shawangunk Mountain, and to have scooped their deepest trench near the base of that high ridge. The river, therefore, turns abruptly near Carpenter's Point from a southeast to a southwest course and follows that of the mountain, sometimes hugging its base, sometimes sweeping a moderate distance from it into the plain, until it finds a passage through it at the great breach called the Delaware Water-Gap. The scenery along this stretch of the river is eminently beautiful. Low within the valley the river is bordered by cultivated flats, variously carved in one or more terraces, and behind these, particularly on the northwest, rise numerous rolling hills, some under the plow, some covered with timber, all deeply cut by ravines, while still beyond the hills we see ascending the long slopes or bold escarpments of the plateau of the Upper Delaware. All the way along on our left the view is bounded by the forest-covered flank and straight crest of the Kittatinny Mountain. Turning at the Water-Gap, the river, in issuing through the main ridge of the mountain, passes between nearly perpendicular mural-cliffs of gray sandstone rising on either side to its crest.

"Leaving the Water-Gap, the river descends gently southward, obliquely across the entire breadth of the Appalachian plain to where it enters the hills called the 'South Mountains' below Easton. This portion of its course is marked by no striking features, the surface of the country being elevated only 100 to 200 feet above it, and being, from the softness of the slates or limestones, smoothed down into rather inexpressive lines.

"Below the mouth of the Lehigh, the Delaware is bordered by an alternation of hills and narrow, intervening valleys, the river-hills being but the ends of the intersected ridge of the chain of the Highlands of New Jersey. But from the southern edge of these hills, at Durham, the scenery for many miles southward wears a wholly different character. It is that of a table-land, elevated 300 to 400 feet above the level of the river, cut, on one or both sides of the valley, into long ranges of perpendicular cliffs, or excessively steep slopes. One range of precipice on the Pennsylvania side, known as the

* Baldwin's Gazetteer of United States, p. 315.

† Rogers's Geology of Pennsylvania, vol. 1, p. 47.

Nockamixen Rocks, is an exceedingly striking and picturesque range of beetling cliffs, rising sheer, for 200 feet, from the brink of the river, with only a narrow roadway and canal between them, through a length of nearly three miles. Some of the views from the base of these carps are almost grand, and the pictures they make, with the river below, are beautiful.

"Farther down the valley the Delaware passes, near New Hope, some bold sides of trap rock, which impart a pleasing variety to its banks, elsewhere in this part of its course comparatively tame. Passing Trenton, its borders presently put on a totally changed aspect, ceasing to be a gay, running stream; full of bushy islands, and rocky reefs, and rapids, it becomes a wide, tidal river, rising and ebbing between shores which are, in many places, only low banks of sand and gravel, and in others broad marshes, covered with reeds and grass. Turning, at Bordentown, southwestward, the river maintains these features all the way to its wide estuary, the Delaware Bay."

The only navigation at present upon the Delaware River, above Trenton, is that of the rafts which come down during the spring and fall floods. Previous, however, to the construction of canals and railroads, the river, although difficult to navigate, was an important highway of commerce. The boats first used appear to have been narrow, flat-bottomed scows, from 25 to 40 feet in length, which were allowed to float down with the current, and on their return up were propelled by poles. About the year 1750 "Durham" boats were introduced, so called from having been first built at Durham Village, ten miles below Easton.

These were round-bottomed boats, pointed at both stern and bow, about 60 feet long, 10 wide, and 5 deep, with a low cabin for sleeping apartment, and one aft for provisions; the center of the boat was thus left free for the load. The crew consisted of three men, two with long setting-poles, and one at the rudder, who also used a shorter pole. When fully loaded they drew about 30 inches; the usual load on the down trip being 20 tons, on the up trip 5 to 10 tons. The time usually required for a trip from Easton to Trenton was one day, while the return trip ordinarily occupied three days. About 1810 coal began to be carried down the river in "arks," which were simply rectangular pine boxes usually hinged in the middle like canal-boats, and being from 50 to 80 feet long and 16 wide, and drawing 2 feet of water. These were furnished with oars for use on the reaches of the river between rapids. On arriving at the market in Philadelphia, after discharging their cargoes, the arks were taken apart, the lumber sold, while the iron-work was carried back across the country to the Lehigh to be used again in the construction of others. The Delaware division of the Pennsylvania Canal, finished in 1830 from Easton to Bristol, caused both Durham boats and arks to be but little used after that time. It is proper to mention here that the river was navigated by Durham boats as far as Lackawaxen Creek, seventy-five miles above Easton, and probably much farther.

The completion of the Belvidere Delaware Railroad, in 1857, rendered any further navigation of the river, except by rafts, unnecessary. Previous to that time, however, it was often customary during the winter season, while the canal was closed, to send canal-boat loads of coal down the river. This could, however, only be done at times of freshet, as several feet of water were required for their safe passage.

In the summer of 1851, in order to facilitate communication with Easton, and the railroad only being built as far as Lambertville, a steamboat, the Major William Barnet, drawing, when loaded, only 18 inches, was run from Lambertville to Easton, the time occupied in making the trip of thirty-six miles being about eight hours.

The lumber business of the river probably began at an early date. Beginning at the lower part of its course, its inclosing banks have been stripped of their forest growth, the work continually receding up the river, until now the lumber production is confined mostly to the counties of Broome, Delaware, and Sullivan, in New York, and Wayne and Pike, in Pennsylvania. The most valuable woods, pine and oak, were first brought to market. In the year 1824, when these timbers were becoming scarce and hemlock was beginning to be cut, the lumber trade appears to have been about two-thirds as large as at present. From 1835 to 1850 it was greater than ever before, and probably exceeded the present production by one-third or one-half. The trade on the Delaware is now declining, and it is estimated that in twenty-five or thirty years will cease altogether. A large item in the marketing of lumber is the hauling of it to the river banks to be formed into rafts. The forests are every year receding from the banks of the river and its tributary creeks, and the time must certainly come when the cost of transportation will be too great to allow it to be brought to market by way of the Delaware. In Appendix B, p. 39, I have shown the *sawed* lumber statistics of the five counties mentioned above, in comparison with the States of New York and Pennsylvania and the entire country for 1860. From this it appears that these five counties produced one-eighteenth of all the sawed lumber of New York and Pennsylvania, and one-eighty-third of the entire production of the United States. How much of this lumber was brought down the Delaware River is not easy to determine. Part of that shown for Broome County probably went down the Susquehanna River, and a small part of the whole was produced for home consumption. But considering that a con-

siderable amount also went down the Delaware from Ulster and Orange Counties, New York, it seems fair to assume that the amount represented by these figures was actually floated to market by way of the river. Assuming, then, \$1,115,983 to be the value of the sawed lumber in 1860, and that an equal number of feet of logs was also rafted, their value from this table being \$499,215, the entire value of sawed lumber and logs becomes \$1,615,198, which, by the addition of wharf timber, piling, &c., might be raised to \$1,800,000; the average value per thousand feet, board measure, being about \$12. The amount of lumber then rafted would appear to be 150,000,000 feet.

The information which I have collected concerning the present trade upon the river shows that it is larger than represented above. The average annual number of rafts at present run to points below Trenton appears to be 3,000, of 60,000 feet board measure. This gives 210,000,000 feet, which, at \$12 per thousand, would be \$2,520,000. Of this number of rafts, 1,500 are of sawed lumber, 1,200 logs, and 800 of wharf timber, piling, &c. In Appendix B, page 39, I present an approximate statement of the business of the saw-mills at and below Easton, from which it appears that 113,700,000 feet of lumber are annually produced from logs brought from the upper waters of the Delaware.

View of end of single Log Raft.

The timber is principally hemlock; occasionally a raft is composed of ash, basswood, and hard maple, but they are rare. The timber for piles is also in part white pine. It is cut mostly in the months of May and June, drawn to the river-banks, and rafted during the next winter and floated to market by the following spring-floods. The logs are cut in lengths from 12 to 40 feet. The logs of 12 feet in length are placed with those of 18 feet and 24 feet to form a raft, being arranged alternately to break joints. In the same way those of 14, 21, and 28 are placed together, and so on, until we find them composed of lengths of 28, 42, and 56 feet, and of 30, 45, and 60 feet. The average diameter of the logs is 20 inches. Many logs are 3 feet in diameter, and occasionally those of 4 feet are seen. The ordinary width of a log-raft is 24 feet, very rarely exceeding 30 feet. In length the rafts vary from 150 feet to 200 feet. At the ends of each length of 16, 18, or 20 feet, as the case may be, are placed across the raft small poles of three or four inches diameter, to which each log is secured by means of pins and bows. Being then furnished at each end with a long sweep or oar, the raft is ready for its journey down the river. After emerging from the creeks at the upper part of the river into sufficient width of water, two of the single rafts described above are lashed together and form what is called a double raft, from 40 to 60 feet wide. An additional oar is often placed at the hind end, so that the crew for a single raft consists of two men, for a double one of four or five men. The steersman stands at the back, right-hand, or Pennsylvania oar, from the head of the river to Upper Black's Eddy, (fifteen miles below Easton,) where he changes to the Jersey oar for the remainder of the trip.

The rafts of the sawed lumber are usually of the same length as the log ones, but of a less width, varying from 18 to 22 feet. The rafts composed of wharf and pile timber, or "toggle timber rafts," are bound together in the same way as the log ones, and in addition are often loaded with sawed lumber. The depth of water required for the safe passage of rafts is from 8 inches to 30 inches, and in rare cases perhaps 3 feet.

The principal lumber depots on the upper Delaware are Delhi and Deposit, on the Mohawk Branch, Walcott, on the East Branch, Hancock, at the junction of the two branches, and Calicoon and Cochocton, twenty-five miles below Hancock. The time required to bring a raft from these points to Easton, varies with the height of the water and the direction and force of the wind. In ordinary rafting freshets of 5 to 10 feet, however, the time appears to be from Delhi to Easton, 165 miles, 40 to 48 hours; from Walcott to Easton, 165 miles, 40 to 48 hours; from Hancock to Easton, 125 miles, 30 to 36 hours; from Calicoon to Easton, 100 miles, 24 to 30 hours; from Easton to Trenton the time is from 10 to 12 hours; so that the entire trip from Walcott or Delhi to tide-water is performed in from 50 to 60 hours, showing the mean velocity to be from 4.3 to 3.6 miles per hour.

Concerning the floods or freshets of the river I have been unable to collect very exact statistics, particularly of those during the last few years. Their times of occurrence seem to be quite irregular, as well as the heights to which they rise. In general it may be said that the river is subject to three classes of floods: the ice-floods, which happen at the breaking up of the river; the rafting-floods, occurring later, from the spring rains; and the fall-floods, caused by the storms of September and October, which, however, are very irregular. The heights of these floods I have only been able to ascertain for Easton and points below; at places above they are known to be similar in their character and occasionally to produce very disastrous effects.

The ice-floods are usually, at Easton, 10 to 20 feet in height, but on many occasions have been known to rise much higher, the "great flood" of 1841 having reached 35 feet. The great accumulation of water here is owing to the influx of the Lehigh, a very turbulent stream in time of freshet, and to the narrow steep banks between which the Delaware is confined; its width being less than 600 feet. The following description* of the effects of the flood of 1841 may perhaps here not be inappropriate:

"It becomes our painful duty to record a scene of destruction and desolation such as never before was witnessed in this section of the country. The late excessive rain, carrying with it the snow which had covered the ground, caused our streams to rise beyond all precedent. On the morning of the 8th instant they came tearing down with awful rapidity, producing waste and ruin on every side, bearing on their angry waters every kind of property, houses, barns, store-houses, fences, stacks of grain, and furniture of all description. The Lehigh River, one of the most unruly of streams, has caused the greatest damage. As far as heard from, not a bridge is left spanned across it. The beautiful bridge here went about 4 o'clock on the morning of the 8th instant. The flats below South Easton, containing the collector's office of the Lehigh Coal Navigation Company, and a small village, were completely inundated, so as to hide the dwellings; all but a store-house was carried off. The lower part of Williamsport is almost destroyed, and both sides of the river here present but one scene of ruin. The Delaware, so remarkable for its mildness as to be called 'the silvery Delaware,' also assumed a new character. It was estimated that it was 35 feet above low water, 6

* Easton Whig and Journal, January, 1841, quoted by Rapp, Hist. Northampton County, p. 53.

feet higher than ever was heard of before. The destruction of the bridge across it was looked for during the whole of the 8th, but it stood the flood, although much injured and torn. Report has it that below this every other bridge on the Delaware is gone. The State works along the Delaware and the Lehigh Company's improvements are damaged to a great extent. At many places no traces of the canal are left, the current having swept the banks away to low-water mark for great distances, and all along the line they are more or less injured."

At Bull's Island this flood appears to have risen 23 feet, at Lambertville 20 feet, and everywhere to have caused very much damage. For ten miles above Trenton the river becomes much wider, and its banks less steep, so that floods are rarely more than 10 or 12 feet. On one occasion, when the ice became jammed at Perriwig Island, causing a blockade, the water was known to rise about 15 feet at Trenton.

The rafting freshets in the spring are of less rise, but of longer duration than the ice-floods; at Easton ranging from 3 to 10 feet, at Lambertville 1 to 8 feet, and at Trenton 1 to 6 feet. A very remarkable rise, however, occurred on June 8, 1862, which was 32 feet at Easton, and, next to that of 1841, the greatest flood on record.

The fall-floods, which are also employed by the lumbermen in sending their timber to market, are irregular in their occurrence and the stage to which they rise. Several seasons have been known in which no floods occurred at this time, while in others, as in 1845 and 1869, they were very great. The following is a partial list of the "great floods," with the heights to which they rose, as nearly as can now be ascertained.

Name of flood.	Date of occurrence.	Height to which it rose above low water.
Pumpkin fresh	October 6, 1786	16 feet at Lambertville.
	1798	Not as high as last, but exact height not known.
Jefferson fresh	1801	14 feet at Lambertville.
	1814	14 feet at Lambertville.
	March, 1832	12 feet at Lambertville.
	April, 1836	14 feet 5 inches at Lambertville.
	April, 1839	14 feet 5 inches at Lambertville.
Great flood	January 8, 1841	35 feet at Easton, 23 feet at Bull's Island, 20 feet at Lambertville, 28 feet at Lamsin's Island.
	October 13, 1843	14 feet at Lambertville.
	March 15, 1846	17 feet 5 inches at Lambertville.
June fresh	June 8, 1862	32 feet at Easton.
October fresh	October, 1869	Exact height not known.

The point which has been particularly forced upon my attention, in connection with this subject, is the great frequency with which floods now occur as compared with the time previous to 1835. While the preceding table is supposed to contain the record of every "great freshet" previous to 1841; it by no means shows those occurring since that date. In fact, they have become too common to be a matter of record. Previous to 1835, floods of 12 feet at Lambertville were considered very high, while 14 feet had been attained only three times within the memory of man, in 1786, 1801, and 1814. But since that time floods of 14 feet have become common, while three have occurred—1841, 1846, 1862—in which probably one-third to one-half more water has been discharged than in any previously known. This is undoubtedly to be attributed to the clearing away of the forests in the river basin, which previously exercised a protective action in restraining the percolation of the rain-fall through the soil and thus insuring to the river a more even flow of water than at present.

While the floods of the river rise higher than formerly, the stage of low water seems to have been becoming lower every year. The observation of the inhabitants appear to show that in times of low water the water of the river is fully 6 or 8 inches below the most unusual low stage of 40 years ago. That this should be true seems also manifest from induction. When the banks of the river were protected by the covering of a forest growth, the rain-fall would pass slowly through the soil and be restrained in its passage over the surface of the ground. The supply to the river would be furnished slowly, and extremes of neither high nor low water might be expected. But the forest has been removed, the soil in great part is under cultivation, and upon a downfall of rain the water quickly runs over the surface of the ground, causing a freshet in the river which often produces serious damage. Then if a dry season ensues the river is scantily supplied and its stage is very low. The summer and fall months are those in which the river is the lowest. (See Appendix C, p. 40.)

To recapitulate then this branch of my subject. I may say that the stage of the river throughout the year is ordinarily as follows: January, frozen and medium height;

February and March, breaking up and high; April, May, and June, high; July, subsiding; August and September, low; October, low but subject to high freshets; November, low—often very low; December, rising a little and freezing.

The above considerations show that the daily discharge of the river is an exceedingly variable quantity. An approximation to the average can, however, be made. I have computed that the area drained by the river *above* Easton is five thousand and twenty square miles, and by the river *below* Trenton, six thousand nine hundred and fifty square miles.

The average annual rain-fall, over this section of country, is 41 inches.* Experiments at the Schuylkill Navigation Reservoir, the nearest point to the area under consideration at which such observations appear to have been made, show that 50 per cent. of the rain-fall at that place is evaporation.† The evaporation will be much less in the Delaware Basin, however, situated as it is in a mountainous region, and its great slope permitting a quick and thorough drainage.‡ Assuming, therefore, the discharge to be 60 per cent. of the rain-fall, the average annual amount of water passing Easton, above the mouth of the Lehigh, is about 246,896,000,000 cubic feet; and passing Trenton, below the mouth of the Arrampink, 397,197,000,000 cubic feet, or 7,800 cubic feet and 12,600 cubic feet per second, respectively. On the 11th of September, when the river was about one foot above the low-water stage, I made a series of soundings and current observations at Wells's Falls, near Lambertville, which have enabled me to find the discharge at that time to be 2,900 cubic feet per second. Mr. Ashbel Welch, of Lambertville, chief engineer of the united railroads of New Jersey, informs me that at times of very low water he has made measurements which have given 2,000 cubic feet per second. The efflux, in times of great floods, is probably fifteen or twenty times as great.

The velocity of the river undergoes variations similar to the discharge. In times of low water it varies from zero in the pools to 9 or 10 feet per second in the swifter rapids. An average velocity seems to be about 2 or 3 feet per second, or from 1.5 to 2 miles per hour. When floods occur the river rises higher at the bottom than at the top of the rapid; it becomes "drowned out," as the raftsmen express it; and in high freshets the water has a nearly uniform slope and velocity through long distances of the river. I have already shown that in rafting freshets the velocity is about four miles per hour. In the great flood of 1841 a man named George D. Fell was carried away upon one of the bridges, and floated several miles down the stream before he was rescued. The time of this event was accurately noted, and it serves to determine that the velocity was twelve miles per hour, or 18 feet per second.

Having presented these general conclusions concerning the navigation and regimen of the Delaware River, I shall now confine myself to that portion lying between Easton and Trenton, and give first an account of its main features and the previous attempts to improve the navigation; afterward a more detailed description of the localities where the obstructions at present exist, and finally a plan and estimate for their improvement.

The following maps have been prepared and will be understood as continually referred to during the remainder of this report:

	Scale.
Sheet No. 1, a general map of the river between Easton and Trenton	31680
Sheet No. 2, map of Ground Hog and Rocky Falls	2400
Sheet No. 3, map of Penn Channel, at Ground Hog	600
Sheet No. 4, map of Tumble	2400
Sheet No. 5, map of Wells's Falls	2400
Sheet No. 6, map of Scudder's Falls	2400
Sheet No. 7, map of Gould's Rift	2400
Sheet No. 8, map of Trenton Falls	2400

The portion of the river embraced by the examination and surveys which I have made lies between the upper bridge, at Easton, and the lower bridge, at Trenton, a distance of forty-nine and a-half miles measured along the line of the river-channel. From Easton to a short distance below Lambertville the river valley is narrow, and its bounding hills often steep and precipitous. During the remainder of the distance to tide-water its banks are low, and it flows apparently in a broad rolling plain, in strong contrast to its previous winding and contracted course. (See Appendix D, p. 41.)

At Rocky Falls, seven miles below Easton, the river makes a sharp turn and breaks through the Pohatcong Mountain, a part of that chain of azoic or metaphoric rock which, running southwestwardly from the highlands of the Hudson, passes through New Jersey, crosses the Schuylkill, near Reading, and continues on in the same course through Pennsylvania and Maryland, under the name of the Blue Ridge. At Trenton Falls it is also crossed by another ridge of azoic rock, which, running nearly parallel

* Blodgett's Climatology of United States, pp. 317, 354.

† Humphreys's and Abbott's Report, Mississippi River, p. 280.

‡ *Idem*, p. 136.

with the first, is seen in New York City and Staten Island, and again on the Schuylkill, near Manayunk. Between these two chains of primitive rock is the red sandstone of the Triassic period, piled up against the northern ridge to great depths, and containing at many points dikes of trap-rock, which now lift themselves high above its surface. Passing then down the river, there is the following succession of rock: From Easton to Rocky Falls, the silurian limestone, which is piled up against the first primitive ridge. Then, from Rocky Falls to Durham, the azoic gneiss, interrupted however at Reigelsville by the limestone, which here borders the valley of the Musconetcong. From Durham to Trenton the triassic sandstone, interrupted at Point Pleasant, at Prallsville, and at Lambertville, by ridges of trap. At Trenton a very narrow belt of azoic gneiss occurs in the river-bed, and below this are the beds of the cretaceous formation.

A list of the heights of many of the hills along the river-banks, as also of other points of reference, is given in Appendix D, p. 41, while the details concerning the bridges are shown in a tabular form in Appendix E, p. 42.

With the exception of the Lehigh and Musconetcong, the creeks are small, and, except in times of freshet, discharge but little water. On the Jersey side, the Pohatcong, twenty-six miles long, drains one hundred and twenty-four square miles, and the Assanpink, twenty-one miles long, drains one hundred and five square miles.* On the Pennsylvania side are the Tinicum and Tobicon Creeks, of lesser size, with a few others still smaller. The soil being very red in color, and large quantities being brought down by these creeks in times of freshet, the water of the river then assumes a muddy-reddish appearance, and it is only during seasons of drought that it becomes perfectly clear and transparent.

The violent freshets which occur now almost annually have swept away from the banks of the river, and from the islands, which are so numerous, great areas of land. This has caused the river to increase in width but to decrease in depth, while the great quantity which has been carried down and deposited at tide-water, between Trenton and Bordentown, is producing great injury to important commercial interests. This action may be illustrated by a reference to Whippoorwill Island, two and one-half miles below Easton. Before the year 1841 it was much longer than at present, with steep banks rising fully fifteen feet above the stage of low water, and covered with a heavy growth of timber. The high flood of 1841 washed away from its upper end a small width of ground with its protecting trees, and each subsequent freshet continued to wear it slowly away. In 1862 all the trees were swept off, except a few at the lower end, and its height greatly reduced. In 1869 the destruction was completed by the removal of the remaining trees, and it is now a mere gravelly shoal, only in its highest point rising five feet above the low-water mark. The entire quantity of earth removed from this island since 1841 cannot be less than 8,000,000 cubic feet. All along the river-banks are seen places where this destruction is continually going on. I have gathered information concerning this action upon the islands and banks for the first six miles below Easton, from which I estimate that, since 1841, there have been annually carried away 70,000,000 cubic feet between Easton and Trenton. Mr. Welch, to whom I have already referred, has made estimates upon this subject which lead him to conclude that an ordinary freshet, such as would rise 10 feet at Lambertville, will sweep away 20,000,000 cubic feet, and that in the very high floods 100,000,000 cubic feet have been carried down.

As already remarked, a large percentage of this is undoubtedly deposited below Trenton. In illustration of this powerful transporting and abrading force of water, I may mention that, during the time of the ark navigation, a cargo of coal wrecked at Welle's Falls was by a single freshet, carried down to Larrison's Island, a distance of two miles, and that large pieces, weighing 100 pounds or more, were worn perfectly smooth and round in their journey.

Between Easton and Trenton there are thirty-one rapids, usually called rifts or falls, produced by contraction of the channel, or obstructions in the river-bed. These are enumerated in the following table, with the principal numerical facts concerning each which I have been able to collect during the limited time allotted to the survey:

*Cook's Geology of New Jersey, p. 26.

Falls and rifts on Delaware River between Easton and Trenton.	Distance from the upper bridge at Easton to the head of each rift.	Miles.	Distance from the rail-road bridge at Trenton to the head of each rift.	Miles.	Length of each rift.	Feet.	Time for boat to run through rift.	M. S.	Height of head of rift above low water at Trenton.	Feet.	Height of foot of rift above low water at Trenton.	Feet.	Fall of each rift.	Feet.	Depth of water at head of rift in time of low water.	Depth of water through rift in time of low water.	Character of bottom of rift.
1. Phillipsburgh Rift.....	0.2	49.3	3,900	6 30	156.70	150.85	5.85	1.0	1 to 4	Stones and gravel.

(*) 1.7 fall in first 500 feet.

In Appendix F, p. 43, I have given, for comparison with this table, a list of the rifts as ascertained by a survey which was made about the year 1827. These rifts may be considered as forming two classes: those with gravel bottoms and those with rocky bottoms; and, as will be seen hereafter, nearly all the difficulty in the navigation of the river is at those points where the rocky bottom occurs.

The entire fall of the river in the forty-nine and a half miles of the survey is, from the above table, 156.7 feet. Although this is not the result of a continuous line of levels, (the canal-level being used sometimes for long distances,) yet it is nearly correct, (see Appendix F, p. 43,) and gives the fall of each rift accurately. The mean fall then is 3.17 feet per mile. In many pools there is scarcely any fall for long distances, while the rapids have a quick descent, the greatest being in Welle's Falls, where in 4,100 feet the fall is 14.38 feet, or at the rate of $18\frac{1}{2}$ feet per mile. The velocity undergoes as great variations in the pools between Lambertville and Trenton, a raft often floating *up* stream under a slight southerly wind, while it runs through the swift rapids at the rate of six miles per hour. As mentioned before, the velocity varies with the stage of water also.

There are three stopping-places or eddies, where rafts halt for the night: Upper Black's Eddy, Lower Black's, and Titusville. Between these points the time and velocity of rafts vary with the stage of water and direction of wind, as follows, (of also p. 8, (2):) Croupe's Eddy, one mile above Easton, to Upper Black's Eddy, sixteen miles, two to five hours, velocity 8 to 3.2 miles per hour; Upper Black's, fifteen miles below Easton, to Lower Black's Eddy, twelve miles, two to four hours, velocity six to three miles per hour; Lower Black's, twenty-seven miles below Easton, to Trenton, (one mile below bridge,) twenty-three and a half miles, five to nine hours, velocity 4.6 to 2.5 miles per hour; Croupe's Eddy to Trenton, (one mile below bridge,) fifty-one and a half miles, nine to eighteen hours, velocity 5.7 to 2.9 miles per hour. From which it appears that the velocity decreases as the river descends or becomes wider.

In the year 1771 the legislature of Pennsylvania appointed twenty-six commissioners to receive subscriptions and to improve the navigation of the Delaware. I have been unable to ascertain whether, at that time, any improvements were made. In 1817, however, (Appendix G, p. 44,) the sum of \$10,000 was appropriated to improve the river from Trenton to a point about twelve miles above Easton, and three commissioners were authorized to undertake the work. With this money blasting was done at Rocky Falls, Tumble, and Welle's Falls, and wing-dams built at several places, which are now almost entirely swept away. Shortly after, the Lehigh Coal and Navigation Company, who were interested in running Durham boats and arks, appear to have spent considerable sums in blasting rocks at Tumble and Welle's Falls, and to have constructed numerous wings, of which remnants are yet to be seen at the Phillipsburgh Rift, at Bull's Falls, and at Welle's Falls.

The State of New Jersey does not appear to have ever made any appropriations for the benefit of the river, although at Phillipsburgh Rift there still exists what is called the "Jersey State wing," and which is said to have been built in 1824. In 1827 there appears to have been a project to construct in the river a slackwater navigation, and a survey was made to ascertain its feasibility. See Appendixes F and G, pp. 43, 44.) It was abandoned, however, and the Delaware Division Canal built instead. Nothing was done from this time till 1861, when the raftsmen raised by subscription the sum of \$1,100, which was spent in building a wing and blasting rocks at Tumble. In 1866 the State of Pennsylvania again appropriated \$10,000 to be expended in further improvements. A small amount of this was spent at Indian Rift, three miles above Easton, and the remainder at Welle's Falls and Wharford's Reefs, near Tumble. I shall allude to these expenditures again when giving in detail the history of the separate localities.

Beginning now at the northern limit of our survey, let us pass down the river, noting in detail its many interesting features, and the difficulties and obstructions to the present raft navigation. To avoid useless repetition, let me premise that, unless where otherwise stated, this description will refer to the ordinary low-water stage, for which the maps are also constructed.

Seven hundred feet below the upper bridge at Easton, where the Delaware has a width of less than 600 feet, it receives from the right the Lehigh River. This stream, here 169.5 feet above tide-water, is raised by a dam 12.8 feet above the first, and forms a part of the navigable communication to the coal regions of Carbon County, while also supplying water to the Delaware Division Canal, which, beginning here, will be continually on our right as we descend. Just below the junction of the Lehigh an outlet lock from this canal affords connection by means of a rope ferry with the terminus of the Morris and Essex Canal on the left bank. To facilitate the transfer of boats from one of these locks to the other a dam is erected under the two east spans of the railroad-bridge below, which raises the water about 1 foot. A raft, then, is obliged to pass under the span nearest the Pennsylvania shore.

When the Lehigh is swollen by floods, its violent current striking the raft tends to force it to the Jersey shore, and it requires at such times great skill on the part of the steersman to prevent it running against the middle pier. A considerable amount of

damage is done to rafts in this way every season. Immediately after passing under the railroad-bridges (see Appendix E, p. 42), which are built side by side, the Phillipsburgh Rift begins. It has a nearly straight course and a uniform descent for three-fourths of a mile, and presents no obstruction to the navigation. About 1,000 feet below its head the raft passes between two wing-dams, called the Jersey State wing and Shansi wing, which are 400 and 300 feet long respectively, built of loose stone, and are never above the low-water stage. These were built, the first in 1824, the other several years previous, to confine the water in the channel for the benefit of the ascending navigation. Below these wings are two large rocks, the Phillipsburgh Rock on the Jersey side rising about 2 feet above the surface of the water, and the Shansi Rock on the Pennsylvania side of a lesser rise.

Below the foot of the rift we enter upon calm water, with a depth of 4 to 10 feet, and a velocity of one to two miles per hour—a velocity which generally prevails in the pools for the first thirty miles of our course. Turning toward the eastward, the river makes a sharp curve called Bridelman's Bend, receiving the Lopatcong Creek near the Andover Iron-Works. Opposite these works is a reef of limestone rocks extending from the Pennsylvania shore two-thirds across the river, and rising 2 feet above the water; they present no difficulty, however, to the raftsmen, who easily clear them by steering near the Jersey shore.

At Whippoorwill and Clifford Islands the channel is between the islands and the Jersey shore, at each place occurring a rift, the first, however, having but a small fall. The islands are bare, gravelly shoals, hardly affording soil enough for the growth of anything but the commonest weeds, and having but a slight elevation above the water. The upper part of the islands consists of cobble and paving stones, quantities of which are annually carried by way of the canal to the Philadelphia market. During the summer season this business is followed all along the river by numbers of men, and seems to be a fruitful source of revenue. Towards the lower part of the islands the gravel becomes finer, and usually at the very end is an accumulation of fine sand, in which likewise a considerable trade is carried on. At the foot of Clifford's is a deep pool and eddy called "Queer Water," after passing which the channel runs through Old Sow Rift between Old Sow Island and the Pennsylvania shore. This rift consists of two pitches at the head and foot of the island, with a semi-pool between them, and has a total length of about half a mile. All along this part of the river the canal upon the right and the railroad upon the left follow closely its windings, raised from 15 to 30 feet above the water, and in many places defended from its action by sloping or vertical walls of stone.

On the Pennsylvania side rise high and steep wooded hills, while the opposite shore, with a less slope, is a rolling, farming region. Numerous limekilns are to be seen built into the hill-sides, which, from the rocks, are continually producing lime for agricultural purposes.

At Ground Hog Island, six and a half miles below the initial point, the river dashes against the Pohatcong Mountain upon its left bank, makes a turn of almost 90° , flows along its base for half a mile, and again sharply turning breaks through it at Rocky Falls. The course which a raft pursues at Ground Hog depends upon the stage of water. Whenever a freshet is high enough to entirely cover the Phillipsburgh Rock in the rift of that name, the steersman considers it safe for him to run between the island and the Pennsylvania shore. This is known as the high-water channel. During the past few years the island has been encroaching upon the channel, owing to jams of ice near its head. The stone-pickers have also filled in a considerable amount to facilitate the passage of their teams to and from the island. This choking up of the channel at present is a serious obstruction to rafts, numbers of which stick upon the gravel-beds every year and are compelled to remain perhaps weeks before getting off. The condition of this channel at low-water stage is better shown upon the maps Nos. 2 and 3 than can be described. Upon the other side of the island the current, at first 2.5 feet per second, soon increases to 4 and 5 feet, and bears a floating object against the rocks near the Jersey shore. The steersman, therefore, heads his raft at first directly for the upper end of the island, and keeps as close to its eastern side as the current will permit. Notwithstanding the vigorous pulling of the crew, the raft drifts toward the Jersey shore, so as to pass near Bogert's and Hoffman's Rocks, and often to strike upon them with great damage. Passing on 500 feet, the raft runs over the Lowry Rock, the Three Knobs, the Central and Little Rocks; meanwhile all the crew are employed in pulling the raft away from the shore with their long oars in order to escape Heineman's Point, a ledge of rocks projecting from the bank 250 feet into the stream, which, if passed in safety, they consider themselves as "through Ground Hog." The annual damage to rafts in these two channels is estimated to be \$3,000, a sum sufficient to remove the obstructions and put both in good order. Of these rocks, Heineman's Points are of the same character as the mountain, the old azoic gneiss; they have a strike of nearly northeast and southwest and dip about 30° southeast. The other rocks are hard quartzite of the lowest Silurian period, the Potsdam sandstone. Hoffman's and Heineman's Rocks rise from 3 to 4 feet above low water, and the others from 1 to 2. At the

foot of the island, near Heineman's Points, the water is very deep, probably about 40 feet, and around the other rocks it varies from 8 to 12 feet.

Between Ground Hog and Rocky Falls the river is only 500 feet wide, but the water is deep and the current slow. At the head of Rocky Falls is a large rock known as the "Entering Rock," about $4\frac{1}{2}$ feet out of water, and 35 feet long by 26 wide. The channel runs as near to this rock as possible; in high freshets over it. This will be seen to be necessary upon inspection of the map. If the raft is permitted to run nearer to the Pennsylvania shore, when it makes the sharp turn near the Entering Rock, the current will strike its side, forcing it against the vertical canal wall, or, if that is escaped, throwing it so far in that direction that it is impossible to clear "Calculation Rock" below. The channel course, then, is to run upon the Pennsylvania side of the Entering Rock, curving as soon as possible towards Jersey, passing over "Blowed Rock," (which was blasted about 1824 by the State of Pennsylvania from the appropriation of 1817, and is now only $\frac{1}{2}$ foot under water,) and running past Calculation Rock upon its Jersey side. After clearing Calculation, there are still three others, the Center, Right-Hand, and Three Knobs, in the channel, beyond which the remainder of the course presents no especial difficulty. Over \$2,000 is annually lost here by the lumbermen in damage and detention to rafts. More than one-half of which is due to the Entering Rock. During the spring and summer of 1872 seven rafts were stuck upon it, at an average expense of \$150 to \$200 each. The character of these rocks is the same as those at Ground Hog—a hard quartzite, known among the raftsmen as "mundock." Aside from these obstructions the depth of water is good—from 4 to 7 feet. Full details as to the size of these rocks will be given in the estimate of cost for their removal, further on.

Near the foot of Rocky Falls, the gneiss rock again makes its appearance in the river-bed, and continues upon both banks for a mile below. Then occurs a mile of limestone, which, resting upon the azoic in the Musconetcong Valley, extends also across into Pennsylvania. After passing another mile of gneiss, we enter below Durham upon the Triassic sandstone, which continues to inclose the river for the remainder of our course.

After passing through Gravelly, a short rift with a uniform pebbly bottom, and the pool near Riegelsville, Durham Falls occurs near the village of that name. At the head of the falls, on the Jersey side, is a wing dam to furnish water to a mill below. The rift, though only 500 feet long, has a fall of 3 feet; but the depth of water is good, and it presents no obstruction to navigation. Above these falls the Musconetcong River, a tributary important for its numerous water privileges, adds its volume to that of the Delaware. Below Durham the rift of Old Fry and Lynn's Falls, upon the Jersey side of an island of the same name, are passed in safety, and we enter at thirteen miles below our starting-point upon Noxamixon Falls. Here the river passes through the Musconetcong Mountain, whose base it has washed for the previous three miles. All along on the right bank, after leaving Durham, its cliffs of red shaly sandstone have risen perpendicularly for 300 to 400 feet, (p. 18,) beautifully adorned with dark evergreens and running vines; and below the Noxamixon Falls the same grand scene continues for two miles further upon the Jersey side. In the falls there are four small rocks, never rising above the water, which are sometimes troublesome to rafts of deep draught; but otherwise there is no difficulty. Two miles further is a long quiet pool, known as Upper Black's Eddy—the greatest landing-place for rafts upon this section of the river. Here in the spring season are often seen 50 to 100 rafts hauled up for the night. On the banks of the eddy, near the hotel, is a rock by which the steersmen judge of the stage of water, and is called the "Unlashing Rock." Its top is 3.7 feet and its base 1.8 feet above the low-water mark. When the water falls below its base it is considered extremely unsafe to "pull out" a raft to run through the dangerous places below. It is worthy of mention also that the only Durham boat now to be seen on the river lies here upon the bank dismantled and slowly rotting away.

Below Milford the river-hills are less abrupt, and cultivated land, with its deep red soil, is often seen. At the Lowerytown Bars, Ferman's Falls occur, near the Pennsylvania shore. These bars formerly extended across the river, and a channel was scooped about 1820, where the rift now exists. (See Appendix F, p. 43.) At present the water is from 1.5 to 4 feet deep, and no improvement is desired. At Stuhl's Falls three small boulders occasionally cause slight damage, but their removal seems hardly to be called for. The river here has a width of 1,000 feet, and below Frenchtown increases to half a mile, where it is filled with numerous islands. The raft-course here is to the Pennsylvania side of Man-of-War Island, then through Buttonwood and Little Howel's Rifts, upon the Jersey side of Marshall's and Ridge's Islands, and finally through Rush Rift, between Rush and Gondola Islands. All these rifts have a smooth gravel bottom, a fair depth of water, and are not difficult to navigate. The islands here are often covered with bushes, and sometimes trees, and have better withstood the action of freshets than those further up the river.

Beginning near Rush Island the river-hills again become more rocky and steep. Rising abruptly 300 feet, on the left bank, near this island, is the "Devil's Tea-Table," continuing southward several miles in a long wooded hill range, which has its counter-

part upon the other shore. These rocks, originally of soft shaly sandstone, have been subjected to the disturbing and heating action of a trap-dike, near Point Pleasant, and have been changed to a darkish or grayish color, while at the same time their hardness has been increased. Near the Devil's Tea-Table Mountain, and twenty-four miles from Easton begin the Wharford Reefs, the head of the locality generally known as "Tumble," which has always been one of the most difficult places to navigate upon the river, and has therefore been made the subject of a detailed survey, like Ground Hog and Rocky Falls.

As seen upon sheet No. 4, Tumble is about one and three-fourths miles in length. In the table upon page 16 I have divided it into Wharford's Rift and Tumble Falls, the former comprising a length from the head to above Little Tumble Reef, and the latter the remainder of the distance. In this length there is a fall of $14\frac{1}{2}$ feet, the water at intervals dropping over the reefs or ledges, and between them running swiftly like a rift. Some of these reefs raise the water over a foot. At the Wharford Reefs their strike is about northeast and southwest 70° , while the others have 80° . The dip is uniformly to the north or northwest, and varies from nearly zero to 15° or 20° . The width of the river is at first 1,100 feet, but is soon contracted by three large islands called, from their owner's name, Solliday's Islands, and at the foot of the falls it is only 500 to 600 feet. The velocity and depth of water therefore increase as we descend, the velocity varying from 3.3 to 6.4 feet per second, and the depth becoming 4 and 5 feet at the foot. The bottom along the low-water channel is mostly rock, and near the Pennsylvania shore it is gravel, while small beds have also formed in the high-water channel and in the rifts between the ledges. The channel course at first tends toward the center of the stream and passes through gaps in the first Wharford Reefs. These are three in number, extending from the Jersey shore 900 feet diagonally across the river. The middle one rises about a foot above the water in many places, while the others are of less height. Below these reefs the channel divides into two, depending upon the stage of water, and I shall first trace the low-water course, returning afterward to the other. Three hundred feet below are the second Wharford Reefs, two in number and parallel with the first. Our course then lies through a gap in this reef upon the left-hand side of "Foam Rock," curves still further to the left, runs along Kingler's old mill-wing, and, after passing Mill and Striker's Reefs, joins the other channel at the gap in Little Tumble Reef. Obstructions in the way of rafts occur at nearly all these reefs, and are yearly a source of much loss. The other channel, upon diverging from the first, passes between Foam Rock and Billy Parks's Wing, both of which are troublesome. This wing, which is 88 feet long and only rises slightly above low water, was constructed in 1861 by William Parks, with a part of the subscription raised by the lumbermen. It was placed, however, too near to the channel, and the logs of which it is made are greatly worn by the rafts which have rubbed upon it. Below this the channel continues in a nearly straight direction to the gap in Little Tumble Reef, passing over a gravel-bar near the head of Solliday's Island, which often causes trouble. At this reef there is a fall of three-fourths foot, but no difficulty occurs. After passing the Brink Reef, the channel curves to the right to shun the Horse Rock, where many rafts are injured, and below runs over the Big Tumble Dam. This near the Jersey shore raises the water 1 to 2 feet. There is a wide gap, however, for rafts, and its passage is easily made. Below this the raft runs over or around the Cut Bush Reef, where also much damage is done, and for the remainder of its course has a clear channel. This last reef is sometimes also called Catchpole, and in Appendix F it is classed as Cutson's Rift. Out of the appropriation of 1817 (Appendix G, p. 44) two or three thousand dollars were probably spent here. Traces of an old wing near the head, to confine water in the channel, still exist, which is said to have been built in 1820, and to have been still further improved in 1824, by the Lehigh Coal and Navigation Company. Blasting, also, was done at Little Tumble Reef and other points. In 1861 William Parks raised a subscription of \$1,100, with which he built the wing bearing his name, and blowed out rocks at Wharford's first reefs and the Horse Reef. The work seems, however, to have been poorly done, and, while costing \$1,100, "caused \$11,000 damage the next year," to quote the opinion of a prominent raftsman. Out of the appropriation of 1866 the State of Pennsylvania spent here from \$2,000 to \$2,500 in widening and deepening the gaps at Wharford's Reef. An annual loss of from \$3,000 to \$4,000 at present occurs here, notwithstanding these improvements. The plan of improvement which I propose is to throw into the channel, by means of wing-dams, a greater quantity of water, thus increasing the depth, and to still further continue the blasting at the dangerous points.

Below the foot of Tumble we pass the Point Pleasant bridge, and enter Lower Black's Eddy, a stopping-place of less importance than Upper Black's. At the foot of this eddy, near the Pennsylvania shore, is also an "unlashing rock," in which, many years ago, an iron bolt was inserted to mark the low-water stage. Owing to the dams at Bull's Island the water now never falls below this bolt, (see Appendix C, p. 40.) Three-fourths of a mile below the unlashing rock is the head of Bull's Island, and the entrance to the feeder of the Delaware and Raritan Canal Company, at present controlled by the

Pennsylvania Railroad Company, which here takes its water from the river. This feeder was built in 1832-'34, under authority of the States of New Jersey and Pennsylvania, (see Appendix G, p. 44.) and for many years received an abundant supply from the river without the aid of dams to raise the water. The great decrease in the stage and quantity of water during the summer seasons in the past few years has compelled the company to put in every spring, below the head of the feeder, a temporary dam to raise the water from 1 to 2 feet. This dam consisted of an inclined trestle-work, covered with plank, and held in its place by the weight of water, involving, however, an annual expense of over \$2,000. The Pennsylvania Railroad Company obtained a charter in 1868 from New Jersey, and in 1872 from Pennsylvania, to build a permanent dam, which

is now in process of construction, (Appendix G, pp. 44 and 45.) It consists of two wings, one of 400 feet in length, running from the Pennsylvania shore, and one of 300 feet, from the island. These slope down stream so as to make an angle of 60° or 70° with the current, leaving between them a space of 120 feet for the passage of rafts. The wings are also to be extended 150 feet down stream, parallel with the current, to form a more safe chute. These wings are to be built with cribbing 25 feet in width, filled with stone, and still further backed with stone for 10 or 15 feet. They are not to raise the water more than 18 inches, by the terms of the charter. At present only the east wing is completed; the other will be constructed during the next summer and autumn, and the total expense is estimated at \$25,000 or \$30,000. It is not apprehended by the raftsmen that this structure will injure the navigation of the falls below, as the depth of water is good, the fall uniform, and the bottom smooth and gravelly.

Near the foot of Bull's Falls is still to be seen one of the old State wings, built about 1820, to facilitate the Durham boat and ark navigation. It is about 400 feet long, nearly parallel to the channel, and is a benefit to the present navigation. At thirty miles below Easton is Paxon's Island, where we find upon the eastern side Eagle Rift and Howell's Rift, the former offering no obstruction, but the latter contains three rocks just cropping out at the low-water stage, which are occasionally hit by rafts. These are called the Three Brothers, and are red, shaly sandstone, each being about 3 by 6 feet. Below the rift also is a ground-bar, where, in low stages, a raft of deep draught sometimes strikes, which turns it from the channel against a bridge-pier below. These accidents are so exceptional, however, that it seems unnecessary to recommend any expenditure here. It is well, perhaps, to remark that the navigation of all the rifts below Bull's Island is now more difficult in low freshets than was formerly the case before the construction of the feeder at that point, owing to the less quantity of water which the river receives. In freshets, when a raft can run safely on the upper waters of the Delaware, it is often forced to tie up at Upper or Lower Black's Eddy, and remain perhaps for several weeks before a rise occurs sufficient to enable it to traverse the remainder of the course.

Passing Bird's Point, Limestone Rift is met at one mile above Lambertville, receiving its name from the unusual appearance of a small ridge of limestone rock projecting out of the sandstone. Here are also two rocks near the channel, the "Chamberlain," about 5 by 5 feet, and another 4 by 5 feet, rising about one-half foot above low water, with a depth of 4 feet around them.

Lambertville, New Jersey, thirty-five miles below our starting-point is, next to Easton and Trenton, the most important town on this part of the river. It is the headquarters of the Belvidere Division Railroad, and a lively manufacturing village.

The river hills are increased in height by several trap ridges, one range of which, crossing the river a mile below the town, causes the rocky and dangerous rapid known as Welle's Falls, which has always caused to lumbermen more loss than any other place* on the entire river.

After passing the bridge, between Lambertville and New Hope, the river has a width of 1,000 feet, a depth of 4 to 6 feet, and a velocity of less than 1 foot per second. Here are the outlet-locks of the Delaware Division and Raritan Canals, and a rope-ferry to transfer boats across the river. About 1,000 feet below are the dams, constructed to facilitate this transfer and to supply water to the Delaware Division Canal, which raise the water $3\frac{1}{2}$ feet. These, after running out from the banks toward the channel, are extended down stream for 500 feet, forming a narrow chute 150 feet wide, through which, at low water, nearly the whole discharge of the river passes. To prevent the spreading of the water, after issuing from this chute, there are constructed below it

*Foul Rift, twelve miles above Easton, may perhaps be excepted.

two short wings on either side of the channel known as La Barre's and Whittaker's wings. As a raft passes through this chute the velocity of the front end is suddenly accelerated, and in the communication of this motion to the slower moving hind end it

"dives" under the water and is subjected to violent strains. In running to the lower end of La Barre's wing, a distance of 400 feet, it falls 4.7 feet, and for the next 3,700 feet 9.6 feet. Immediately after passing the lower wings the current drives the raft toward Price's Rock with a velocity of 7 or 8 feet per second, near the Jersey shore. This rock is from 1 to 2 feet above the water, and to prevent the raft from hitting it the steersman is forced to run over both Center and Foam Rocks, which rise only slightly above low water. It is at Foam Rock that the majority of accidents now occur, lying as it does directly in the channel, and presenting an abrupt face to the current. (See plan below.) Below this the channel is bordered with many rocks, (the bottom in fact being all rock,) but no difficulty occurs until near the foot of the rapids, where Fish and Flat Rocks obstruct the course, the latter causing many losses.

The way in which accidents occur there is briefly: The raft in running the chute dives, perhaps breaking its lashing-poles or displacing logs, then running over Center and Foam Rocks it strikes, causing the raft to separate or break up; if this, however, is escaped the same may occur at Flat Rock. The annual loss to lumbermen from these obstructions is about \$5,000.

The traditions that I have gathered concerning Welle's Falls show that it was formerly more dangerous than at present. Many accidents have occurred, of which records are preserved in the names of the rocks, only a few of which I shall here mention. About 1810 a Durham boat loaded with buckwheat-flour was wrecked on a rock now known as "Buckwheat," and another at the rock called "Hundred Barrel." About 1818 a raft struck Foam Rock drowning one of the crew named Harding, and in 1824 an ark was also wrecked, killing George Croupe. The present wing-dams were not then built, but their place was partly supplied by wings to furnish water to saw and grist mills on either side of the river.

In 1830 these dams were improved so as to furnish a supply of water to the Delaware Division Canal by means of a power and lift wheel.

In 1848 this canal was connected with the Raritan by outlet-locks and a rope ferry, and the dams still further improved.

In 1866 there were expended about \$7,000 out of the appropriation of that year, and

probably as much more by the canal companies, in putting in additional dams. The blasting done here has been, at Blowed Rock, in 1824, by Lehigh Coal and Navigation

Company, and, in 1866, by the State of Pennsylvania, at Hundred Barrel Rock and at the Entering Rock, which was then a dangerous obstruction. At present there are, upon the Pennsylvania side, 900 feet of timber dams and 1,050 feet of stone, which is controlled and annually repaired by the Lehigh Coal and Navigation Company, and upon the Jersey side 650 feet of timber and 550 feet of stone, under the care of the Pennsylvania Railroad Company, the lessee of the Raritan Canal Company. The timber dams are built with cribbing, as shown on sheet No. 5, filled and backed with stone, while the remainder is simply a heap of stone requiring frequent repairs. The quantity of water passing through the power and lift wheels on the Pennsylvania bank of the river is about 400 cubic feet per second, of which not one-fifth is probably used for the canal.

Below Welle's Falls the pools of the river have a depth of about 5 feet, and the current is so slight that even in freshets a raft sometimes moves up stream. Near Titusville occurs a ridge of trap of moderate elevation, but the principal rock is the red sandstone, of which there are many good quarries. The river-bed is only slightly depressed below the level of the surrounding country, which is an excellent farming region. Bucktail, Beaumont's, and Carr's Rifts have but a slight fall and present no obstruction to rafts.

Scudder's Falls, forty-three and one-half miles from Easton and six above Trenton, is the head of Trenton water-power, which receives from the river its supply of water for the use of numerous manufactories in Trenton. A dam of timber and stone raises the water about $1\frac{1}{4}$ feet, leaving a chute of 115 feet in width for the passage of rafts. The bottom of the river being entirely gravel, great quantities have been washed out at the end of the chute and deposited further down in the form of bars, which are causes of considerable detention and expense to lumbermen. These bars are very changeable, altering their situation and shape nearly every season, and also, of course, the direction of the currents. Accordingly the first rafts of the season are liable to run upon them, the steersman being unable to judge where the proper channel is. The annual loss here is not probably over \$1,000. This dam has been the cause of much bitter feeling as well as litigation between the interested parties, but their stories are so contradictory that I confess myself scarcely able to form an opinion of the true merits of the case, but give them for reference in appendix K, pp. 45 and 46.

Twenty-five miles below Scudder's Falls are Gould's Island and Rapids. The channel course lies between the island and the Pennsylvania shore, the bottom being partly of sandstone rock, and also many trap boulders obstructing the passage which have been doubtless washed down the river from Welle's Falls. The main difficulty here is the slight depth of water caused by the large amount taken from the river at the canals and water-power above, and by the boulders and gravel which have been washed into the rift. No improvements have been made here, as it is only within the past few years that accidents have happened. Probably the yearly loss is less than \$500.

Below Gould's is a small gravelly shoal covered with a few bushes, now called Cisil Island. Formerly it was much larger and well wooded, and was called Blackguard

Island, as it was a favorite resort of indigent gentlemen of leisure. The channel passes between this shoal and the Pennsylvania shore, near several rocks which are just under low water and occasionally troublesome. These are called Nigger Head and Kirkbright, the former about 5 by 3 feet and the latter 7 by 6; and a few others without names are also near the channel, but they rarely cause accidents except through carelessness. Further down there are three rocks, never dangerous, by which the raftsmen steer, the Marble Roll, Cocked Hat, and Sun Fish Ripple, the latter 1,200 feet above the new Trenton bridge, below which we enter upon Trenton Falls.

After passing this bridge the raft enters upon shallow water, among numerous rocks and boulders, and in 3,400 feet falls 7.5 feet, with a velocity of about five feet per second. The rocks are at the head mostly the bed-rock of gneiss, but at the foot, where the tide meets the river-current, there have accumulated numerous boulders and a gravel-bar. To run through these falls without hitting a rock requires great skill on the part of the steersman, and it is estimated that an annual loss of about \$2,000 is suffered. Here, as at Gould's, accidents now happen more frequently than in former years, owing to the diminution in the quantity of water. Upon the Pennsylvania side lies Moon Island, from the head of which a wing-dam is built to turn water behind the island for the saw-mills below. This island, I have been told, was formerly a part of the main bank, but was separated from it about two hundred years ago, in a land-slide, and the channel formed in its rear. Upon the opposite side of the river there exist broad shoals, which are covered by rises of 3 and 4 feet. About 1,000 feet above the foot of the falls the raft-channel divides the main one, running over the gravel-bar and the other known as "Woodpecker Lane," avoiding it by passing among the rocks on its western side. This latter course is rarely taken by rafts, as the rocks are numerous and the channel narrow, but is used by scows and small boats.

Immediately below the old Trenton bridge the Delaware becomes a broad tidal river, and is navigable for sloops and steamers of light draught. The usual landing-place for rafts is about one mile below this bridge, from which they are towed to market, the logs going to Bordentown and the sawed lumber mostly to Philadelphia.

The following is a summary of the average annual losses to lumbermen between Easton and Trenton:

At Ground Hog.....	\$3, 000
At Rocky Falls.....	2, 000
At Tumble.....	3, 500
At Welle's Falls.....	5, 000
At Scudder's Falls.....	800
At Gould's.....	500
At Trenton Falls.....	2, 000
At Noxamixon.....	
At Stuhl's, Howel's, Limestone, and near Blackguard Island.....	500
	17, 300

It is to be understood that very little lumber is ever lost or destroyed, but that the loss occurs in the detention of rafts, a double expense being then necessary to float it to market, (since the crew is paid by the trip,) or in the breaking up of the raft, when several days' labor are required to put it together again. The loss will be seen to be less than 1 per cent of the entire value of the lumber. Upon a careful consideration of all the facts in the case, it seems evident to me that to put the present raft channel in such order that it can be navigated in low water, would require the expenditure of a large sum of money. This, however, is not required in the interests of the lumber trade.

Remembering that the lumber business on the Delaware is every year decreasing, and considering that, notwithstanding an annual loss of over \$17,000, I have been unable to find but very few persons interested in the movement, it seems doubtful if any appropriation should be asked. But since rafts are only run at stages of water greater than 1 or 2 feet, and are usually steered by experienced pilots, improvements could be made by which the present loss would be almost entirely obviated at a moderate expenditure of money. Such a plan I here present for the seven localities where the detailed surveys were made, and also for the five localities mentioned above where slight obstructions occur; wing-dams in correspondence with those at present existing on the river to be constructed to deepen the water in the channel, and blasting and removal of gravel-bars to be done where the accidents now occur. In making this estimate I have supposed that the labor will cost \$240 per day, and that the work is to be done at the low-water stage without interruption from freshets. At Ground Hog, I propose that the Pennsylvania Channel be dredged or scooped with ox-teams, using ordinary road-scrapers, and the gravel be removed to the head of the island and formed with cedar-brush into a wing which will throw water into the channel and still further deepen it, and that the following rocks be removed to a depth of 1 foot below low-water mark.

Name or locality.	Average length and breadth.	Average height above low water.	Depth of water around rock.	Cubic feet to be removed.	Kind of rock.	Number of drill- holes probably required.	Depth of each hole.
	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>				
Hoffman's Rock	14 by 10	3.0	4 to 9	560	Hard quartzite.	25	1 to 2
Small rock near last	4 by 3	0.3	4 to 9	14	do	2	1.5
Bogert's Rock	18 by 9	1.0	8.0	298	do	12	1.5
Lowery Rock	13 by 8	0.5	8.0	156	do	6	1.5
Central Knob	5 by 3.5	0.4	8 to 10	23	do	2	1.0
Little Rock	9 by 6	1.0	12.0	108	do	5	1 to 2
Three Rocks	{ 6 by 3.5 4 by 3.5 6 by 5 }	{ 2.0 1.5 }	12.0	158	do	8	1 to 2
Small rock near last	3.5 by 2	1.5	12.0	18	do	2	2
Heiniman's Points	{ 23 by 10 23 by 8 20 by 15 }	{ 3.0 }	20 to 30	2,372	Gneiss	50	1 to 2
Total				3,707			

Estimate.

Dredging 800 feet long, 70 feet wide, and to a depth of 1 foot below low water—say 2,000 cubic yards—and building wing 350 long, 5 feet on base, and 2 feet on top, and 3 feet high, of brush, stones, and gravel	\$800 00
Removing 3,707 cubic feet rock, at 33 cents	1,223 31
Total for Ground Hog	2,023 31

At Rocky Falls, the following rocks should be removed:

Name of rock.	Average length and breadth.	Average height above low water.	Depth of water around rock.	Cubic feet to be removed.	Remarks.	Number of drill holes probably required.	Depth of holes.
	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>				
Entering Rock	36 by 27	3.0	4 to 7	3,288	These rocks are hard quartzite	100	...
Calculation Rock ..	{ 12 by 4 7 by 5 3 by 2 4 by 2 }	3.0	6.5	355	October 10 tried drilling in Entering Rock. First drill went 2.5 inches, in 30 minutes; with second went 2 inches, in 20 minutes. Hole being thus made 1.5 in diameter and 4.5 in depth, and both drills being badly dulled and broken.	15	1.5
Centre Knob	3 by 2	0.0	4 to 6	6			2 1.0

Three Knobs	{ 6 by 2 6 by 3 2 by 2 }	2.5	4 to 6	99			7 ...

Total cubic feet in Rocky Falls, 4,384; at 33 cents, is \$1,446.72.

The great width of the river at the head of Tumble causes the depth of water in the channel to be slight. I propose to erect two wing-dams to concentrate or deepen the water in the channel, and to remove reefs and gravel-bars, which are now dangerous. Upon the Pennsylvania side of the channel, on the site of the old State wing, a wing should be built of timber and stone in a substantial manner, as it will be liable to accidents from floating ice in the winter. It should be 360 feet long, 6 feet wide, and 5 feet high, the cribbing formed as shown in sheet No. 4, the lower ties fastened with pins, and the upper with bolts. Upon the Jersey side a wing should run from the shore, 830 feet, upon the first Wharford Reef formed by a single range of timber, bolted to the rock, and protected by a backing of stone. Parks's wing being nearly in the channel, the eastern part should be removed, and Kugler's Mill wing, now not used for mill purposes, should be repaired at the breaks, to prevent water settling against rafts, and forcing them upon the opposite reefs. In the high-water channel a slight amount of scraping at the gravel bar will be necessary, and the following rocks ought to be removed:

Name or situation of rock west of channel.	Average length and breadth.	Average height above low water.	Depth of water around rock.	Cubic feet to be removed.	Number of drill holes probably required.	Depth of holes.
	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>			<i>Feet.</i>
At first Wharford's Reefs*	15 x 10	0.1	2 to 3	150	6	1.0
At first Wharford's, in channel		0.4	1 to 2	50		0.8
Between first and second reefs			2 to 3	30	2	1.0
Wharford's second reef,† above Foam	18 x 12	1.0	1 to 2	324	12	1.5
Foam	40 x 15	0.8	1 to 3	800	30	2.0
Knobs below Foam, in southwest channel		-0.5	1.0	20		
Rock, 460 feet above Mill Reef	7 x 4	0.7	1.0	56	2	1.5
Mill Reef, east end‡	10 x 3	1.0	2 to 3	60	3	1.5 to 2
Rock, 200 feet below Mill Reef	12 x 8	1.0	1.0	192	7	1 to 2
Striken Reef, east end			1 to 2	100	4	1 to 2
Horse Rock	10 x 10	0.5	1 to 3	100	4	1.5
Rock, 100 feet below Big Tumble	8 x 3	0.5	3 to 5	48	2	1.5
Cut Bush Reef	40 x 12		3 to 4.5	960	30 or 40	
Total cubic feet				2,890		

* These rocks are all altered red shale, but will drill easily with 1½-inch drill and one hammer. I put a hole 6 inches deep in one hour without hardly dulling the drill.

† One hole already drilled, probably in 1866, 6 inches deep and 1.5 inches diameter.

‡ This rock has a bolt 1 inch diameter set into it and bent over. Why it was put there is unknown.

Estimate of expense of improvement at Tumble.

Wing on site of old State wing; 360 feet long, 6 feet wide, 5 feet high:

1,440 linear feet hemlock log, 16 inches diameter, for ranges, at 5 cents.	\$72 00	
122 hemlock ties, 7 feet long, 12 inches diameter, 854 linear feet, at 5 cents	42 70	
122 bolts, 18 inches long, 1 inch diameter, at 40 cents	48 80	
200 days' labor, building and filling with stones, at \$2.40	480 00	
		\$643 50

Wing on first Wharford's reef, 830 feet long, 3 feet wide, 1 foot 5 inches high:

830 linear feet oak logs, 12 inches diameter, at 25 cents	207 50	
208 bolts, 18 inches long, 1 inch diameter, at 40 cents	83 20	
200 days' labor drilling rock, building, &c., at \$2.40	480 00	
		770 70
Repairs to Rudler's and Parks's wing		160 00
Dredging gravel bar 500 feet long, 70 feet wide, and to a depth of 1 foot below low water, say 800 cubic yards, at 30 cents		240 00
Removing 2,890 cubic feet rock, at 33 cents		953 70
		2,767 90

At Welle's Falls there ought to be some means devised to prevent the driving of rafts. In the opinion of competent raftsmen this can best be done by putting an apron in the

Section and Elevation.

chute, consisting of logs 60 or 70 feet long, fastened 3 feet apart by their upper ends, and the lower ends free to float. Each log is to be strengthened by a clevis and secured by bolts firmly to the rock. To put this apron in its place a temporary or coffer dam will be required, and can be made in the way ordinarily followed on the river, it being held in its place by the weight of

water. The same timber can afterward be used for the temporary dams needed in blasting Center and Foam Rocks. As a great quantity of water now passes around

Section and Elevation.

the end of Whittaker's wing and is useless for navigation, I propose to throw it into the channel by extending the wing farther up stream, and also to further protect the channel by an additional wing running from Price's Rock to La Barre's wing; these wings to consist of

timber cribbing filled with stone like those at present existing, and as shown on sheet No. 5.

The following rock also should be blowed :

Name or situation.	Average length and breadth.	Average height above low water.	Depth of water around rock.	Cubic feet to be removed.	Number of drill-holes required.	Depth of holes.	Remarks.
Centre Rock.....	10 x 6	0.0	2 to 5	60	8	1.0	These rocks are trap, nearly pure hornblende and quartz, and hard to drill. With one hammer I drilled a 1½-inch hole 4 inches deep in one hour, dulling two drills badly.
Rock 40 feet above Centre	4 x 5	0.3	3.5	60			
Foam Rock.....	32 x 20	0.0	3 to 5	1,920	50 or 60		
Flat Rock.....	25 x 15	0.0	5 to 6	750	25	1 to 2	
Total cubic feet.....				2,790			

In the following estimate I include the cost of the timber for the temporary dams, and to allow for the expense of putting it up at the various rocks, I put the cost of blasting at 40 cents per cubic foot instead of 33, as heretofore.

Temporary dam, for putting in apron and drilling rocks :

12 oak horse-pieces, 15 feet long, 1 foot diameter, 180 linear feet, at 10 cents.....	\$18 00	
36 oak logs, 7 feet long, 6 inches in diameter, 252 linear feet, at 10 cents.....	25 20	
2,400 feet, board measure, hemlock plank, 2 inches thick, at \$20..	48 00	
150 pounds spikes for upper and lower planks, logs, &c., at 5 cents.	7 50	
		\$98 70
30 pine logs, 70 feet long, 2 feet in diameter, 2,100 linear feet, at 25 cents.....	525 00	
30 clevises, 7 feet long, 3 inches wide, ¾ inch thick, at \$4.....	120 00	
90 clevis-bolts, 2 feet long, 1 inch in diameter, at 40 cents.....	36 00	
60 bolts for logs, 3 feet long, 1½ inches in diameter, at 60 cents....	36 00	
40 days' labor, to put in temporary dam, at \$2.40.....	96 00	
400 days' labor, to put in apron, at \$2.40.....	960 00	
		1,773 00

Extension of Whitaker's wing, 250 feet long, 15 feet wide, and 6 feet high :

2,250 linear feet hemlock logs, 18 inches in diameter, for ranges, at 5 cents.....	112 50	
153 ties, 18 feet long, 1 foot in diameter, 2,754 linear feet, at 5 cents	137 70	
153 bolts, for top ties, 18 inches long, 1 inch in diameter, at 40 cents.....	61 20	
500 days' labor, at \$2.40.....	1,200 00	
		1,511 40

Wing on Jersey side from Price's Rock, 350 feet long, 15 feet wide, and 6 feet high :

3,150 linear feet hemlock logs, 18 inches in diameter, for ranges, at 5 cents.....	157 50	
213 ties, 18 feet long, 1 foot in diameter, 3,834 linear feet, at 5 cents.....	191 70	
213 bolts, for top ties, 18 inches long, 1 inch in diameter, at 40 cents.....	85 20	
700 days' labor, at \$2.40.....	1,680 00	
		2,114 40
Removing 2,790 cubic feet rock, at 40 cents.....	1,116 00	
		6,612 50

At Scudder's Falls, I am unable to see that any alterations or improvements in the dams would remove the bars below, although many raftsmen claim that the removal of the dam would benefit the channel. I propose to dredge out the channel through the

gravel bar, to a sufficient depth to allow the free passage of water, which will then probably keep the course open.

Dredging 700 feet long, 90 feet wide, and to a depth of 2.5 feet below low water, say :

1,000 cubic yards, at 40 cents \$400 00

At Gould's Rift, I suggest two stone wings to throw water into the channel, and that the following boulders and rocks be removed :

Name or situation.	Average length and breadth.	Height above low water.	Depth of water around rock.	Cubic feet to be removed.	Number of drill-holes probably required.	Depth of drill-holes.	Remarks, &c.
	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>			<i>Feet.</i>	
First and second breaks... {	3 by 3 {	0.0	1 to 3	42	3	1.5	Gray trap boulders.
	6 by 2 }						Do.
Gould's Rock	5 by 3	0.4	2.0	30	1	2.0	Gray trap boulders ; 3 to be removed.
Part of Kimball's nest		0.4	1.5	20			Gray trap boulders ; 1 to be removed.
Nest below Kimball's.....	4 by 2	0.1	1.5	8	1	1.0	Gray trap boulders.
Jersey Rock	by 2.5	0.0	1.5	15	1	1.0	Red sandstone boulder.
Red Back Rock	5 by 4	0.2	1.5	36	1	1.0	Trap boulder.
Mitchell's Rock.....	5 by 5	1.6	1.7	50	3	1.5	Red sandstone boulder.
Beagle Rock	6 by 3	0.4	1.5	18	2	1.0	
Total				219			

The estimate for improvements at Gould's is, then :

A stone wing at head of island 300 feet long, 5 feet wide on base, 2 feet on top, and 3 feet high, at \$1 per linear foot	\$300 00
A stone wing from Simmons's Rock toward shore, 270 linear feet, other dimensions as above, at \$1.....	270 00
Removing 219 cubic feet of rock, at 40 cents.....	87 60
	<u>\$657 60</u>

At Trenton Falls, a wing should be built to deepen the water in the channel, the gravel-bar should be dredged, and the following rocks removed :

Name or situation.	Average length and breadth.	Height above low water.	Depth of water around rock.	Cubic feet to be removed.	Number of drill-holes required.	Depth of holes.	Remarks.
	<i>Feet.</i>	<i>Feet.</i>	<i>Feet.</i>			<i>Feet.</i>	
End of Yellow Reef	4 by 2.....	0.0	2.5	16	2	1.5	These rocks are mostly horn-blendic gneiss.
Center break		0.0	2 to 3	160			
4 Jersey Way Rocks.....	Each 4 by 2	0.5	2 to 3	64	2 for each		
14 boulders on Grand Bar.	Each about 5 by 3.	0.5	0.5 to 2	420	do	1.5	
Bobby.....		0.0	3.0	160		1.0	
Small knob on Upper Division Rock.	3 by 2.....		3.5	6	1	1.0	
Total.....				826			

As loose stones are not numerous here, the fragments of these rocks would be useful in building the stone wing.

Estimate for Trenton Falls.

A stone wing 500 feet long, 5 feet wide on base, 2 feet on top, and 3 feet high, at \$1.60 per linear foot.....	\$800 00
Dredging 600 feet long, 80 feet wide, and to a depth of 1.5 feet below low water, 1,200 cubic yards, at 40 cents	480 00
Removing 826 cubic feet of rock, at 40 cents	330 40
	1, 610 40

For the five localities where detailed surveys were not made, I estimate:

At Noxamixon Falls, removing 4 rocks, not to exceed 400 cubic feet, at 50 cents	\$200 00
At Stuhl's Falls, removing 3 rocks, not to exceed 300 cubic feet, at 50 cents.	150 00
At Howel's Rift, removing 5 rocks, not to exceed 200 cubic feet, at 50 cents.	100 00
At Howel's Rift, dredging gravel-bar, not to exceed 1,200 cubic feet, at 30 cents	360 00
At Limestone Rift, removing 2 rocks, not to exceed 100 cubic feet, at 50 cents	50 00
At Blackguard Island, removing not to exceed 220 cubic feet, at 50 cents..	110 00
	970 00

It only remains to sum up the amounts for the different localities, and to add the necessary incidental expenses, to complete the estimate:

Ground Hog	\$2, 023 31
Rocky Falls.....	1, 446 72
Tumble	2, 767 90
Wells's Falls	6, 612 50
Scudder's Falls.....	400 00
Gould's Rift.....	657 60
Trenton Falls	1, 610 40
Noxamixon Falls, Stuhl's Falls, Howel's Rift, Limestone Rift, and Black-guard Island	970 00
	16, 488 43
Inspector, six months.....	700 00
Assistant engineer, six months.....	600 00
Traveling expenses.....	200 00
Office-work	300 00
Advertising.....	200 00
	18, 488 43
Add 25 per cent. for unforeseen expenses.....	4, 622 11
	23, 110 54

It appears, therefore, that a very small sum comparatively will so far improve the navigation of this portion of the river as to yearly save over \$17,000, (see p. 23,) and greatly reduce the present risk and danger attending those who navigate the rafts.

In concluding this report I wish to acknowledge the valuable assistance of Mr. A. Mitchell, secretary of the Lehigh Coal and Navigation Company, and of Mr. J. A. Anderson, superintendent of the Belvidere Division Railroad, in allowing me copies of the canal and railroad maps; and the important information received from Mr. Ashbel Welch, chief engineer of the United Railroads of New Jersey, concerning the regimen of the river, and particularly to mention my indebtedness to Captain L. B. La Barre, the pilot upon the survey, from whose thorough practical acquaintance with the river I have derived a large part of the results here given.

Very respectfully, your obedient servant,

M. MERRIMAN,
United States Assistant Engineer.

Lieutenant-Colonel J. D. KURTZ,
Corps of Engineers.

APPENDIX A.

[Map—see original.]

APPENDIX B.

Statistics of sawed lumber for the year ended June 1, 1860. (From United States census reports.)

Locality.	Number of mills.	Capital invested.	Cost of raw material.	Number of hands employed.	Annual value of lumber produced.
Broome County, New York.....	80	\$163,800	\$75,900	166	\$164,710
Delaware County, New York.....	166	137,000	106,171	243	201,745

APPENDIX F.

Proposed line of navigation from the junction of the river Delaware with the Raritan Canal up the stream of the Delaware to the mouths of the Lehigh and Lackawaxen Creeks and thence up to the New York State line, north of Wayne County, near the forks of the Potacton and Cookquago.

"In the Delaware River there are no precipitous falls. It well accommodates a downward navigation, and this distance of its upper water can sometimes, in season of flood, be also ascended by boats. To render it passable at all times, it is proposed to clear out and deepen the natural channel, to cut down the heads of the falls and pitches, so as to make the descent more gradual and uniform; then to dam up the lakes and ponds about the tributary streams, so as to save water to be used in the dry season; and lastly, in case of necessity, to construct lateral canals at particular passes, the execution of which, it is expected, will so far improve the navigation of the Upper Delaware as to enable boats of some burden, and possibly steamboats, to navigate nearly all the summer through, quite up to the fords.

"The particulars of the existing falls, rapids, and shallows between tide-water and Easton are described from actual surveys, as follows; and in so far as they obstruct the river navigation there is reason to believe effectual improvement forthwith will be made. The States of both New Jersey and Pennsylvania are highly interested in the measure.

Name.	Distance below the mouth of the Lehigh in miles.	Length of each in feet.	Fall of each.	Head of each above tide.
			ft. in.	ft. in.

Bixten.....	½	2,000	7 5	160 5

"In addition to which there are the following shallows, where the water, without sensible fall, has but little depth:

"Limestone Shallows, thirty-two and one-third miles below the Lehigh; they have 15 inches at low water.

"Lowerytown Shallows, sixteen and one-quarter miles below the Lehigh, formed by a sand-bar in the pool, through which a channel is cut near the Pennsylvania shore.

"Whippoorwill Shallows, two and one-half miles below the Lehigh, a small gravel-bar at head of an island, and, moreover, many shallow spots in the different pools by sand-bars or by rocks lying near the surface.

"March, 1827. A bill is now before the Pennsylvania legislature to authorize the construction of a navigable communication between Philadelphia and Easton, and by continuation to Carpenter Point, provided it shall be done in the Delaware Valley, and at a cost not exceeding \$12,000 per mile.

From "A connected view of the whole internal navigation of the United States, natural and artificial, recent and prospective, corrected and improved, &c., &c., with a map, &c., &c. By a citizen of the United States." Philadelphia, 1830. Above extract is on page 106.

APPENDIX G.

Laws of Pennsylvania concerning the navigation and improvement of the Delaware River between Easton and Trenton.

Act of March 9, 1771, (v. Laws Pennsylvania, vol. 1, p. 322,) declares that, whereas the improvement of the navigation of rivers is of great benefit to commerce, and whereas many persons have subscribed large sums of money for this purpose; therefore, &c., the Delaware and Lehigh Rivers shall be common highways for the purposes of navigation.

Twenty-six commissioners are appointed to receive subscriptions and to improve the navigation by widening, enlarging, straightening, or otherwise improving the channel.

Provides a penalty of "twenty pounds good and lawful money of this province for constructing dams to impede navigation."

Act of September 20, 1783, ratifies New Jersey act of May 27, 1783, which see, page 50.

Act of March 13, 1817, (Laws of Pennsylvania, vol. 6, p. 422,) appoints three commissioners to improve the river from Foul Rift* to the bridge at Trenton. Appropriates \$10,000 for the work.

Act of March 29, 1819, same as New Jersey act of March 1, 1820, which see, page 50.

Act of April 6, 1825, (Laws of 1825, p. 144,) authorizes the Delaware and Raritan Canal Company to supply the said canal with water from the river, provided no injury is done to either ascending or descending navigation, but reserves the right to withdraw this privilege if, in consequence, the water of the river is lowered one inch, and also provides that this privilege shall cease whenever the State of New Jersey shall refuse to grant a similar right to Pennsylvania to take the same amount of water.

Act of March 26, 1826, (Laws 1826, p. 155,) repeals last act and passes another essentially the same, except "two inches" is substituted for "one inch."

Act of April 9, 1827, (v. Laws 1827, p. 196,) provides for survey of Delaware Valley from Bristol to Carpenter's Point with a view of constructing a navigable communication, and provides that if after this survey the navigation can be built for \$12,000 per mile it shall be done, provided the existing natural navigation shall not be impaired.

Act of April 23, 1829, (Laws 1829, p. 312,) appoints three commissioners to meet commissioners from New Jersey to decide where and how water may be taken from the Delaware for canals and water-powers.

Act of April 10, 1832, (v. Laws of 1832, p. 638,) appoints three commissioners to ascertain facts about a certain dam of which complaint has been made, and to examine the river near Welle's Falls to ascertain the best way to supply the Delaware division of the Pennsylvania Canal with water.

Act of February 8, 1833, order the above commissioners how the obstructions in the river can best be obviated with regard to both navigation and the use of its waters for canal.

Act of April 20, 1846, authorizes canal commissioners to erect a dam at Welle's Falls to supply canal with water and to facilitate navigation between the outlet-locks, provided it does not interfere with the passage of fish or Durham boats, or the raft navigation. Repealed February 9, 1848.

Act of April 4, 1866, (Laws 1866, p. 436,) provides that, whereas the natural and artificial obstructions in the Delaware River above tide-water are such as to render the running of lumber in rafts to Philadelphia and other points extremely hazardous, causing every year the destruction of large quantities of the same, and thereby increasing its price in market, and whereas said river is the only outlet from the upper lumber region of the Delaware; therefore the sum of \$10,000 is appropriated to remove these obstructions, &c. I. T. Barnes, Wayne County; John Shause, Pike County; John Fisher, Bucks County, are appointed commissioners† to improve the river at such points as they may deem best to carry out the true intent of this act.

Act of March 7, 1872, (Laws, 1872, p. 259,) authorizes the Delaware and Raritan Canal Company, or their lessee, the Pennsylvania Railroad Company, to construct permanent wing-dams in the Delaware River, from the head of Bull's Island, and also from the Pennsylvania shore to the raft-channel, not exceeding 18 inches high above common low-water, and to complete and maintain the wing-dam heretofore built for the improvement of the raft navigation at Welle's Falls; also to erect such temporary structures in said channels in times of low-water as may be necessary to keep up the supply of

* Foul Rift is about twelve miles above Easton, and is a very dangerous place.

† Mr. Shause is the only one of these commissioners now living, and his address is Easton, Northampton County, Pennsylvania.

water to the canal of said company, and to maintain sufficient depth of water to enable loaded boats to cross to said canal from the Delaware Division Canal: *Provided*, That nothing in this act shall authorize the obstruction of the raft channel or interfere with the running of rafts.

*Laws of New Jersey concerning the navigation and improvement of the Delaware River between Easton and Trenton.**

Act of May 27, 1783, (see Revised Statutes, 1846, p. 41,) declares that the river Delaware, from the northwest corner of New Jersey to the place upon the said river where the circular boundary of Delaware toucheth upon the same, is, and shall continue to be and remain, a common highway, free and open for the use of both New Jersey and Pennsylvania.

Act of November 26, 1808, (see Revised Statutes, 1846, p. 480,) provides that if any person shall erect, set up, build, or maintain any wing-dam, except such as may be put up in pursuance of any special act of the legislature, or placing any other obstruction injurious to the navigation of the river Delaware, he shall be subject to the penalty of \$100.

Act of March 1, 1820, (v. Revised Statutes, 1846, p. 547,) provides that no dam, wing, or other device, creating, drawing, or using a water-power, shall hereafter be erected in the Delaware River, between New Jersey and Pennsylvania, without a view first had by three skillful and respectable freeholders in each State residing near the spot of the proposed construction; said freeholders to be appointed by the court of quarter sessions, and to report to said court. If they report favorably, and that it will not injure the navigation, the court may grant permission for the construction of the wing or dam. Penalty of not less than \$500 nor more than \$1,000 for violating the provisions of this act.

Act of February 18, 1829. (See Laws 1833, p. 246.) Whereas the waters of the river Delaware may, by a proper arrangement between the two States, be used for feeding canals and water-powers, to the great and lasting advantage of both: Therefore, *Resolved*, That three commissioners be appointed to meet a similar commission from Pennsylvania, to decide how and where the waters may be most advantageously used for these purposes, and their agreement, when duly ratified by the legislatures of both States, shall be binding and conclusive.

Act April 15, 1868, (See Laws 1868, p. 1036,) authorizes the Delaware and Raritan Canal Company to make such a structure as may be necessary for the protection of their feeder at Bull's Island, not exceeding 18 inches above low water, and not interfering with the raft navigation; also to complete the wing-dam at Welle's Fall for the improvement of raft navigation; also to erect temporary structures at these places in times of low water, for the protection of their feeder and the canal navigation.

APPENDIX K.

HISTORY OF SCUDDER'S FALLS.

Statement of Trenton Water-power Company.

Dams were first built at Scudder's Falls in 1819, by commissioners of State of Pennsylvania, in the sole interest of raft navigation. The State of New Jersey chartered the Trenton Water-power Company, in February 16, 1831.† Under this act the dams were still further improved, but as the chute was so near the feeder as to trouble the raftsmen, the company, under authority of the commissioners of 1866, changed it in 1869 to its present position, and replaced the stone dams with timber. This was done after full consultation with the raftsmen, and the work was superintended by one of their number, Mr. J. O. Whittaker, of Deposit, Delaware County, New York. It has proved satisfactory to them all, and is considered a perfect success. Whatever losses occur by rafts sticking on the gravel-bar below are always promptly paid by the company. In 1870, a suit was brought in

* I have been unable to obtain access to the New Jersey laws previous to 1846. The above list is therefore imperfect.

† Being unable to find access to the early laws of New Jersey, I cannot verify this statement.

the county court at Doylestown, Pennsylvania, against the company, by fishermen, who considered the change in the dam injurious to the downward passage of shad. Upon this trial the raftsmen universally testified in favor of the dam as one of the best improvements on the Delaware River. The judge, however, considered, that although the commissioners of 1866 had authorized this work, they had no right to do so, as their term of office had expired, and he hence imposed on the company a mere nominal penalty, which, however, prevents them from repairing or improving the dams.

Statements of raftsmen.

Dams were first built at Scudder's Falls about 1833, but no charter has ever been obtained authorizing their construction. They were at first of stone; but as the chute was so near the feeder, the supply of water to it (the feeder) was insufficient, and accordingly the company, in 1869, moved it to its present position, and in thus altering the natural channel, have caused great obstruction to the raft navigation. It has caused the greatest dissatisfaction, and is the source of a great yearly loss. No lumbermen, except a few particular friends of the company, have ever succeeded in getting pay for these losses. In the suit of 1870, the prosecutors undertook to prove by the raftsmen that the dam was a nuisance and an obstruction to navigation, and their universal testimony was to this effect.

The court sentenced the company to remove the dam, and ordered the sheriff to do so at their expense if the company did not do it in one month. The dam, however, is still standing, the sheriff having been "bought up" by the company.

Statements of disinterested parties.

The dams at Scudder's cause a considerable loss of young fish. The opinions of raftsmen are divided in regard to the improvement. At the trial in 1870, fifty raftsmen swore that in their opinion it was a benefit, and fifty others that it was a decided injury. Then a reserve of twenty-five followed who coincided with the first, and twenty-five more who agreed with the second opinion. The sentence of the court seems to be of the nature of an injunction restraining the company from making further improvements.

Estimate for improvement of the Delaware River between Trenton and Easton.

J. D. KURTZ,
Lieutenant-Colonel of Engineers.

UNITED STATES ENGINEER OFFICE,
Philadelphia, Pennsylvania, January 27, 1873.

V.—SURVEY FROM DELAWARE LINE TO CHINCOTEAGUE INLET, VIRGINIA, THROUGH WORCESTER COUNTY, WITH VIEW TO AN INLET AT "THE HOMMACKS."

UNITED STATES ENGINEER OFFICE,
Philadelphia, Pennsylvania, January 29, 1873.

GENERAL: I have the honor to present the following report on the survey of "the bay or sound from Delaware line through Worcester County to Chincoteague Inlet, Virginia, with a view to an inlet at or near a place called the Hommacks," provided for by "an act making appropriations for the repair, preservation, and completion of certain public works on rivers and harbors, and for other purposes," (general nature, No. 134,) and placed in my charge for execution by your instructions of June 19, 1872.

The papers accompanying this report are the detailed report of the assistant engineer in charge of the work, Mr. F. M. Eppley, with an estimate of the cost of the improvement, and the following maps forwarded by express:

Sheet No. 1. General chart of the strait at the Hommacks and adjacent region.

Sheet No. 2. Coast-Survey chart, No. 28, showing reconnaissance to Chincoteague Inlet.

Sheet No. 3. Reconnaissance at Chincoteague Inlet, 1872.

A preliminary report was transmitted by me on the 12th December, 1872.

The whole subject of the desired improvement, embracing the nature and probable cost of the works, the permanency of the inlet, if opened, the productions of the country to be benefited, and the existing disadvantages to its commerce sought to be removed, is set forth in Mr. Eppley's report.

A large body of fine white-oak forest (timber now becoming so valuable) needs to be opened to market. Square sticks, 50 feet long, and siding 2 feet by 2 feet, are not unusual in this region. Pine and cypress also are of its growth; oysters, fish, and game are in great abundance, and the whole country is rapidly becoming a part of the great market-garden of the Delaware Peninsula, to produce in profusion berries, peaches, grapes, and all vegetable supplies for the table.

The present water-outlet of this production is by Chincoteague Inlet, which is at the southern end of the bays bordering Worcester County, and the use of which route involves a loss of eighty miles to all vessels trading to northern ports. It is to remedy this difficulty and to secure a good and rapid method of transit for perishable articles that the opening of an inlet at the Hommacks from the ocean to the bays is desired.

There is reason to expect that such an opening can be effected by the proper application of the necessary works. The local circumstances of the case are favorable. The current of the interior waters now sets against the beach at the proposed locality with suitable direction and velocity. On the ocean side there is a natural breakwater of shoals at convenient distance, which will diminish the force of storm-waves rolling in to the beach. A noted case in our history of an endeavor to open an inlet through the beach to the ocean is that of Nag's Head, North Carolina. That attempt was abandoned after some considerable efforts had been made; but it appeared that since the closing of the original inlet great unfavorable changes had ensued in the waters concerned, which rendered the undertaking impracticable.

Whether the proposed opening when made will prove to be permanent is a more difficult point on which to arrive at a sure conclusion. Several inlets have been formed in the vicinity (the history of which is given by Mr. Eppley) during the past seventy years, all of which are now closed again. But these were produced by breaches of the sea, from the ocean side, and reciprocal natural influences have restored the normal condition of the shore. In the present case it is proposed to avail ourselves of the assistance of an existing favorable current derived from the water-courses of the adjacent region, and offering itself advantageously at the desired locality. It is to be considered at the same time that examples in the adjacent country of inlets subject to the influence of like currents do not present an entirely favorable condition of water-way.

Indian River Inlet, just north, is the outlet of streams draining a considerable region of country. This inlet is variable in its condition and does not at present afford much depth of channel.

Chincoteague, the present outlet of the bays under consideration, likewise varies materially in its position, the conformation of its shores, and the depth of its channels. The accompanying map of a reconnaissance of the inlet exhibits the changes.

It is to be kept in view in weighing the force of these examples, however, that the natural influences concerned have not been aided or utilized by any artificial devices. In the present case it is proposed to control and give direction to the natural flow of the bay waters by a collecting and directing dam, and also to add such works on the ocean beach as will aid in maintaining and protecting the débouché of the inlet. With these conditions all satisfied, success may be reasonably hoped for.

The effect of the opening upon the bay waters behind it requires to be considered as an important part of the question. The level of the straits at the Hommacks being about that of high water of the ocean, and the tide having a fall of three feet, it follows that at low water the surface of the bay will be three feet above that of the ocean. At present there must be a slope of the bay surface of about three feet between the Hommacks and Chincoteague Inlet, at low tide. Were the proposed inlet opened there would be a like slope toward it at low water, both from up the rivers and from down Synepuxent Bay. This slope would be subject to modification by the extent of the wing-dam proposed to be constructed in the bay. At any rate, the northern waters of Synepuxent Bay would be shoaled somewhat at low tide by the action of the inlet.

The prevalent currents on this part of our coast are shown on Sketch C, (No. 8, Progress Sketch, Section III,) of the Coast Survey Report, for 1868.

It is believed that no objection exists in the communities along the bay shores to the proposed undertaking, while generally there is a strong feeling in its favor.

The estimate of the engineer in charge would be sufficient if all circumstances prove favorable during the execution of the work. But prudence requires that in such an undertaking unfavorable influences be taken into the account. For this reason I have increased it considerably. If the work shall be executed at a less expenditure, the balance of funds will revert to the Treasury.

The cost of the survey is as follows:

Field-work, instruments, and materials.....	\$340 59
Field-work, workmanship.....	1,047 05
Office-work, services.....	610 00
Contingencies.....	173 00
	2,170 64

Very respectfully, your obedient servant,

J. D. KURTZ,
Lieutenant-Colonel of Engineers.

Brigadier-General A. A. HUMPHREYS,
Chief of Engineers United States Army, Washington, D. C.

Report of the survey of the vicinity of "The Hommocks," between Isle of Wight and Synepuxent Bays, Worcester County, Maryland, made with a view to the opening of an inlet at that locality, from the ocean to the interior waters, 1872.

PHILADELPHIA, December 27, 1872.

SIR: In obedience to your orders received by me at Philadelphia, August 28, 1872, I proceeded on the following day to Berlin, Maryland, for the purpose of making a hydrographic and topographic survey of a place called "The Hommocks," situated on the coast of Maryland, about seven miles east of Berlin, in Worcester County, and eleven miles southwest by south from Fenwick's Island light, with a view of ascertaining the feasibility of making and maintaining an inlet between the southern extremity of Isle of Wight Bay and the Atlantic Ocean.

The work covers an area of six square miles, extending from Turner's Point, in Synepuxent Bay, to Massey's Shoals, in Isle of Wight Bay, embracing the shore-lines of both bays within the prescribed limits and the ocean-beach, in all about twenty miles, together with soundings, current and tidal observations, and levels. The field-work was commenced August 30, and was completed October 21, occupying twenty-seven working days; 10,339 soundings and 1,836 hydrographic angles were taken, besides 245 angles at twenty trigonometrical points; 15 current-stations were established, and observations made for surface and sub-surface currents; six miles of level-lines were run on the beach, in sections of 100 feet, together with eight lines to determine the hill and surrounding marsh on the western shore.

The sextant was used principally in the field-work. The soundings were determined by means of the "three-point problem." A tide-gauge was erected upon our arrival, and observations commenced and continued throughout the whole work. There is very little tide at "The Hommocks," it being forty-five miles from Chincoteague Inlet. It is influenced entirely by winds, southeast bringing the highest tide. There is a variation usually of about three inches, though for days there does not seem to be an appreciable difference of all the readings of the gauge.

The greatest rise of tide was 1.5 feet. The soundings were reduced to a plane of reference in the bay, while the ocean soundings were referred to the gauge at Chincoteague Inlet.

The greatest depth of sounding inside was 13 feet; in the ocean 32 feet. They are expressed in feet upon the chart. In the current observations in the narrows, I found the general direction to be south-southeast during ebb-tide, which runs with a mean velocity of 4,673 feet per hour. With a south wind, the flood-tide flows almost due north, having a mean velocity of 2,060 feet per hour. The flood-tide is caused only by southerly winds.

The level-lines have been plotted and contours drawn showing every foot. The greatest elevation on the beach above low-water mark in the bay is 8.55'. The difference of level between bay and ocean at low-water mark is 3 feet; the bay being the highest.

A reconnaissance of Synepuxent and Assateague Bays was made, which consisted in running a line of soundings through the channels and best water in the bays, from "The Hommocks" to Chincoteague Inlet. The characteristic soundings have been laid down upon a Coast Survey chart of those bays. The average depth of water in these bays is about 4½ feet, though vessels drawing 5 feet carry oysters from abreast of Snow Hill Landing to New York and other points through Chincoteague Inlet. There are several small landings along the western shores of these bays, but they are scarcely worthy of consideration. Vessels usually load with the assistance of lighters and small boats at any point where the water is of sufficient depth to enable them to

approach near the shore. The most important articles of traffic are grain, oysters, fish, and timber. The shoalest water is on the beach or eastern side of these bays, which I think is caused by the sea washing over the beach at extremely high tides, during heavy easterly winds, carrying the sands into the bays. The western shore is marsh, covered with high grass. The eastern is the ordinary sand-beach. About eight miles of shore-lines were run at the entrance of Chincoteague and Assateague Inlets, to ascertain if any change had taken place since the survey was made by the United States Coast Survey. From my investigations, I think the mouths of both inlets have undergone great changes. Both inlets appear to be shifting to the southward, and the Middle Ground between the two inlets is making rapidly. The mouth of Assateague Inlet is much narrower than formerly. Persons living in the vicinity have readily noticed these marked changes. A large shoal is making outside, about one mile to the northward of these inlets. The channels and bars have not a fixed regimen, but usually maintain their usual depth of water on the bars, 10 feet low water on Chincoteague and 6 feet low water on Assateague. A tide-gauge was erected at Assateague Inlet and observations taken daily; mean rise and fall, 2.5 feet. Some little idea can be gained of the importance of these inlets when I state that 83 vessels, carrying 350,000 bushels of oysters and 10,000 cords of fire-wood, together with fish and grain, pass through these inlets annually.

A line of soundings was run across the mouth of Saint Martin's River, near the head of Isle of Wight Bay. The cross-section is about 3,000 feet wide, and has an average depth of $5\frac{1}{2}$ feet. The current is rather sluggish, which is no doubt caused by its being obstructed by Massey's Shoals, which lie about two miles below its mouth, extending across Isle of Wight Bay. This shoal has only about $2\frac{1}{2}$ feet water upon it; its bottom is composed of a stratum of sand about 2 feet deep, overlying soft mud.

Several inlets have broken through the beach at different points, during heavy gales. I have endeavored, as far as lay in my power, to get information concerning their history, &c.

Sandy Point Inlet opened in a June gale in the year 1821; it contained about 6 feet water on the bar, and closed in the year 1831. This inlet was situated opposite Sandy Point, about ten miles south of "The Hommocks."

Green Point Inlet opened in 1837 during a gale, and closed about seven years afterward.

Synepuxent Inlet opened about sixty or seventy years ago, and remained open till the year 1831. The above-mentioned inlets all broke through the beach within a space of three miles.

Green Run Inlet, one of the most important, remained open eight or ten years, and was navigable for vessels drawing from 4 feet to 6 feet water. It closed after shifting about one-half mile to the southward, and now, like all the others, not a vestige of it remains.

I have learned that these inlets usually shift to the southward before closing, and commence to fill up from the inside by the formation of little bars or bulk-heads across the channel-way. As they were all caused by the attack of heavy seas during gales, my impression is that they closed because the diluvial detritus of the seas was carried in on the flood-tide and lodged, as there was not sufficient ebb-tide to keep these depositions "alive."

Assawamin and Gargothly Inlets, which lie to the southward of Chincoteague, on the Virginia coast, appear to be shifting constantly. They have at times 6 feet water on the bar, while they have been known to shoal to a depth of 2 feet. There are five inlets on the Virginia coast within a space of forty miles. The country seems to be much lower than that lying to the northward of Chincoteague. The marsh extends five miles inland.

By examination of the general features of the inlets on the Virginia coast, it will be seen that they are all located at the southern extremity of bays or lagoons, and that their general direction to sea is about southeast. The proposed work, lying at the southern extremity of Isle of Wight Bay, shows our efforts to be in conformity with nature. The natural tendency or set of the current in the narrows is south-southeast, before it is deflected by striking the beach shore, and by its prolongation diagonally across the beach to sea, gives us an inlet the general direction of which could be the same as those mentioned.

The cross-section of the bay, just at the opening of the proposed inlet, contains an area of 4,876 square feet, through which the water is now flowing with a mean velocity of 1.3 feet per second. A volume of 6,338 cubic feet of water is consequently moved through said section per second.

Supposing the canal to have been opened just at high water, the water-surface of the bay and ocean would then be on the same horizontal, no particular motion being perceptible in the bay at the mouth of the inlet. As soon as the tide turns, the water from the bay commences to flow through the inlet with steadily increasing velocity and volume until the maximum of both is reached. With a fall of 3 feet between

ocean and bay, the computed maximum velocity for a canal 125 feet at the top, 100 feet at the bottom, with a depth of 6 feet and 2,400 feet long, would be, per formula:

$$\text{Velocity in feet per second} = \frac{A \times F \times 8975}{W} - .1089 = 7.6$$

A = Area in square feet.

F = Fall in feet per foot.

W = Wet perimeter in feet.

8975 = Constant quantity.

.1089 = Constant quantity.

This gives a velocity of 7.6 feet per second, and a volume of 5,130 cubic feet. This result is rather approximate, for there are many local causes which may affect this result appreciably. This would allow a surplus of 1,208 cubic feet of water to flow into Synepuxent Bay. It was the original intention to construct an inlet 200 feet wide, and 6 feet deep, but it will be seen, according to the rules of Eytelwine and Rankine, that there is not sufficient water to maintain it. The discharge is more than could be supplied by the regular flow in the bay, and that the inlet in that case would have to be 5,500 feet long, instead of 2,400 feet. By the greater length the present level of the bay would be left undisturbed, and at all times, except the period of low water, there would be a surplus of water in the bay not required for the inlet, which would find its way into the lower bay.

Freely admitting the above computations to be based upon scientific experiments, and that the velocity of water has but one law, being always proportional to the square root of its height, our judgment tells us that it does not seem possible for any practical purposes to make use of the solutions of such hydraulic problems. I do not think the velocity could increase at the rate of five miles per hour, in the short distance of 2,400 feet. The velocity must increase gradually throughout the whole bay, which can be done only by an increase of the natural slope of the water, that is to say, by augmenting the angle of declivity of the surface of the water longitudinally. Now, it is clear that the upper part of the inclined plane cannot be elevated to produce the greater fall, but that the lower part near the canal will be, naturally, by degrees, lowered to obtain the increased slope and required velocity. The level of the surface of the bay, in the vicinity of the canal, must, consequently, sink below its present line. This again will cause the difference of level between bay and ocean to be less than 3 feet, or, in other words, that part of the bay whose surface is 3 feet above low-water mark will be found a considerable distance higher up the bay than at present. It is obvious that this loss of head in the bay will in time occasion a diminishing velocity of current in the inlet. In a comparatively short time the permanent relations between bay, inlet, and ocean, will thus regulate themselves. The increased velocity of current in the bay will have a scouring action on the bed, gradually deepening it toward the inlet, thus preparing a bed of easier slope, creating in fact, by degrees, a channel, the length of which, in relation to its fall, will finally harmonize the capacity of the Isle of Wight Bay for supply with the demands of the inlet for discharge. It is clear that the opening of the inlet will cause a much more sluggish motion of the currents in Synepuxent Bay, which will increase the shoaling of the whole bay. As this process is going on, the tendency will be to widen and deepen the inlet, which points out the necessity of a careful construction of the banks of the inlet, particularly the upper and lower ends. The mouth of the inlet or point of junction with bay or ocean should be enlarged as per diagram, giving it at that point the shape of a contracted vein. Without such enlargement a slight fall will form itself at its mouth, beyond that which the canal was intended, and will diminish the calculated depth throughout its entire length to an amount equal to the fall. The currents of the inlet will most probably prevent any formation of bars or shoals at its mouth on the ocean side; besides, we have the advantage of two large shoals, known as "Great and Little Gull Banks." Little Gull Bank lies about two miles to the eastward of the work, and contains only 12 feet water at some places. A heavy sea will break in 12 feet water, and, as the breaking will arrest the force of heavy seas during gales from the eastward, we will have comparatively smooth water at the mouth of the inlet. Besides, the southerly current, according to observations of the United States Coast Survey, flows nearly due north, striking the shore several miles below the inlet. It is then deflected and flows northeast through the sound made by the Gull Banks and the shore, cutting across the mouth of the inlet with increased velocity.

A jetty 1,000 feet long should be constructed, about 650 feet to the southward of the mouth of the inlet, extending to the 15-foot curve, as per diagram. This would protect its mouth from the southeasterly gales and the abrading influences of the southerly currents, for it will be seen that the ocean-beach is cutting away in the vicinity of the inlet. The northerly current sets at southwest; consequently we are protected by the Gull Bank Shoals.

In the construction of the proposed work the axis of the inlet should strike the point

immediately where the channel makes an elbow in the narrows, and prolonging the set of the ebb-current diagonally across the beach to the ocean in the direction of south-southeast.

The width should not be less than 125 feet, and 6 feet deep. A canal of less width would not allow small vessels to beat against head-winds. Particular attention should be paid to the embankments, which should be high enough to protect the inlet from inundations during heavy easterly gales, when the breakers wash across the whole beach. The best plan for an embankment would be to drive piling 15 feet below the water-line at a distance of 20 feet apart, connect them with strong pieces, which should then be overhung with bushes and aquatic grass to encourage its growth upon the banks. The soft strata found in the dredging should be overlaid upon the structure, the embankment to have a slope of 45° .

A wing-dam in the bay is necessary to force the water through the new channel. This could be made of sheet-piles driven to a depth of 6 feet, having 2 feet extant, the whole to be connected with wales. This structure should be 950 feet long, and to run parallel to the direction of the inlet, commencing 250 feet to the southward of its mouth.

The work involves a considerable amount of dredging or removal of sand in making the cut between the bay and ocean. This could be done at an average cost of 40 cents per yard. A dredge could be built on the ground at a cost of \$10,000 that would remove from 200 to 300 cubic yards daily.

I think the cheapest and most feasible channel to dredge through Massey's Shoals would be to connect the 5-foot curve in the bay with the deep water in the "Thoroughfare." As I have already said, I think this shoal will have a greater depth of water after the opening of the inlet, but in case it does not, the dredging of this shoal is indispensable, for without a channel of 5 feet from the inlet into Saint Martin's River the work would be of little consequence.

The turning of the water of the Pocomoke River into the Saint Martin's River would help to deepen the water in this shoal materially.

For a number of years the people of Worcester County have conceived the idea of uniting the waters of Pocomoke River with the Saint Martin's, in connection with the construction of an inlet and the drainage of a vast area of country. In the year 1856 Colonel C. W. Jacobs, of Worcester County, secured the services of an engineer, who made a reconnaissance of the country lying between the two rivers. A line of levels was run, and a fall of 27 feet was found in five and five-eighths miles, the distance between the two rivers. He reported favorably upon the works, and proposed to cut a ditch 15 feet wide and 6 feet deep. This canal, with a fall of $4\frac{1}{2}$ feet to the mile, would give an increased volume of water in the Saint Martin's River amounting to 372 cubic feet per second.

I now insert Mr. Jacobs' opinion upon the subject:

"If, in connection with the inlet, a canal was cut across from the upper end of the Pocomoke River into Saint Martin's River there would be no lack of water, and the work would be permanent. It would only require between five or six miles of cutting, at an expense of about \$25,000. If this canal was cut, it would reclaim an area of at least 60,000 acres of land, now in a low swampy state. The Cedar Swamp lying in lower Delaware, and joining the Maryland line, contains 22,000 acres of land, and the numerous ditches running up in westerly direction must drain 22,000 acres more, while the bed of the river and the intervening country between the two rivers would drain at least 16,000 acres more. I have always regarded the two enterprises as essential to the permanency of an inlet."

Whether it would successfully drain the country is a question somewhat in doubt. Several years ago this was successfully done in New Jersey by the Salem Creek and Meadow Company, by uniting the Salem River with the Delaware by means of a ditch three and a half miles long. Two years after drainage, potatoes were raised on lands previously submerged. The two sections above and below this canal are nearly the same breadth. The estimate of the engineer for the cost of this work will accompany this report.

Estimate for construction of inlet.

93,000 cubic yards excavation, at 40 cents per yard.....	\$37,200 00
For stone jettee outside, 1,000 feet long, 3,787 perches stone, at \$4 per perch.	15,148 00
Wing-dams, sheet-piling 950 feet long, at \$2 per foot.....	1,900 00
Construction and embankments.....	1,800 00
Dredging Massey's Shoals, 13,333 cubic yards, at 35 cents per yard	4,666 55
Salary of engineer and incidental expenses	2,000 00
Total.....	<u>62,714 55</u>

Estimate of Peter Sowers, civil engineer, for cutting ditch to unite the Pocomoke and Saint Martin's Rivers.

189,340 cubic yards, at 9 cents per yard.....	\$17,040 60
Clearing and grubbing.....	3,000 00
Total.....	<u>20,040 60</u>

I will now endeavor to give an idea of the advantages that may arise by the construction of this inlet. Many things could be said in its favor, and it would undoubtedly be of incalculable value to the people of Worcester and Wicomico Counties. Whether it would be of sufficient importance to a large community, so as to make it a national project, is a question. There are several points within thirty miles of the proposed work which seem to have very good water communication with Baltimore via Chesapeake Bay. Snow Hill, a thrifty little town lying about twenty miles southwest, is situated on the Pocomoke River. Vessels drawing 6 feet have no difficulty in landing their cargoes on her wharves after a passage of about forty-five miles up the Pocomoke.

Saulsbury, a town on the Wicomico River, has also good communication with Baltimore. It would seem from this that an inlet is not necessary; but there is one important difficulty, viz: water communication with New York and Philadelphia. A glance at the map will show that vessels bound to Philadelphia or New York from either of the above-named places will be compelled to run a distance of nearly two hundred miles around Cape Charles before they come abreast of the inlet, showing a saving of thirty hours, allowing vessels to have fair winds. Another important fact is that there is no inlet between Chincoteague and Indian River, Delaware, a distance of over seventy miles, while on the Virginia coast they have five within a space of forty miles.

The most important feature of the inlet would be the development of immense tracts of woodland, composed principally of white oak. Fire-wood is scarcely worth cutting, simply because they have no means of transporting it. This section of country is especially adapted to the raising of fruit, as it matures very early there. By the introduction of salt water into the Isle of Wight Bay through the inlet, it would have a tendency to allay the malarial disease arising from fresh-water marshes and lowlands.

Isle of Wight Bay would become one vast oyster-bed, affording the markets of New York and Philadelphia a ready supply. It would also promote a long talked of enterprise of building hotels and summer resorts on the beach. In fact it would open up a country which is at present almost entirely undeveloped.

Small vessels are frequently wrecked in this vicinity owing to the want of a harbor for protection. In this case we gain another advantage by the competition of this proposed work. I will now append extracts of a letter upon this subject from one of the prominent men of Worcester County.

"This is one of the largest counties in the State, peculiarly located and abounding in resources far superior to any other section of our State. It has Delaware on the north, Virginia is on the south, and the Atlantic Ocean on the east, with an inland bay divided from the ocean by a narrow strip of beach running its whole length from Delaware to Virginia.

"This inland bay is a broad sheet of shallow water, varying from two to seven miles wide, fed by numerous streams putting up into the main-land, all abounding with variety of fish for this latitude, and the bay thoroughly bedded with oysters surpassing the celebrated York River and Lynn Haven oysters of Virginia. This is not all. Our country has a soil unsurpassed in fertility, and yet studded by primeval forests of immense growth, all of which is to us and the outside world of comparatively no value, simply for want of an inlet."

The following is an accurate estimate of the resources of the country which would be developed by the construction of this inlet; it was carefully prepared by some of the most reliable gentlemen of Worcester County:

Estimate.

Six thousand acres white-oak timber, averaging 10,000 feet, 60,000,000. Fifteen thousand acres pine timber, averaging 20,000 feet, 300,000,000. Two thousand five hundred acres cord-wood timber, averaging 40 cords, 1,000,000. Three hundred thousand bushels grain. One hundred vessels wrecked last twenty years; average value \$20,000 each.

Fifty square miles oystering-grounds where the water is now fresh, will be made salt by proposed inlet.

Advantages to fruit and trucking incalculable.

Advantages in shipping stock,

One hundred and twenty miles saved in distance to New York by inlet over present route.

I take pleasure in returning my thanks to Messrs. Kennedy and Mackall for their intelligent co-operation in the work.

I have the honor to be, your most obedient servant,

F. M. EPPLEY,
United States Assistant Engineer.

Colonel JOHN D. KURTZ,
United States Army, Corps of Engineers.

Estimate of the cost of opening an inlet at the Hommocks, Worcester County, Maryland.

Channel through beach :	
Dredging a cut 2,000 feet by 7 feet deep, and 250 feet wide, from the bay to the ocean, 150,000 cubic yards, at 50 cents.....	\$75,000
Wing-dam :	
260 piles driven, at \$3 each.....	780
Jettée on beach :	
1,680 logs, round timber.....	\$2,325
3,000 cubic yards stone.....	24,000
Iron-work and labor on grillage.....	3,500
Superintendence, advertising, office-work, and contingent expenses.....	29,825
	7,000
	112,605
Add for unforeseen expenses.....	8,000
	120,605

NOTE.—This estimate is at full quantities and prices, to cover unfavorable circumstances. If these should not occur there will be a reduction in the expenditure.

J. D. KURTZ,
Lieutenant-Colonel of Engineers.

UNITED STATES ENGINEER OFFICE,
Philadelphia, Pennsylvania, January 29, 1873.

VI.—EXAMINATION AND SURVEY OF HARBORS OF WASHINGTON AND EDENTON, AND MOUTH OF MACKAY'S CREEK, NORTH CAROLINA.

UNITED STATES ENGINEER OFFICE,
Baltimore, Maryland, December 31, 1872.

GENERAL: The appropriation bill of June 10, 1872, contained directions for surveys or examinations at three localities in North Carolina, viz, the harbors of Washington and Edenton, and the mouth of Mackay's Creek.

But little field-work was needed, as existing Coast Survey sketches furnished nearly all the information required to indicate the character of the obstructions to navigation, and provided much of the data upon which to base estimates of the cost of improvement. Such re-examination as was found to be necessary was made by Assistant Engineer George H. Elliott, at Edenton, in August, 1872, and at Washington and Mackay's Creek, in October, 1872. His reports are submitted herewith, one for each place; those for Edenton and Mackay's Creek being dated December 17, and that for Washington being dated December 18, 1872. Each is accompanied by a sketch, marked respectively, E, M, and W.

A communication from the United States collector at Edenton, dated November 22, is inclosed, as is also a brief letter from the deputy col-

lector at Washington, the two giving statistical information concerning the commerce of the three places.

For a description of these localities, their resources and capabilities, reference is requested to Mr. Elliott's reports, which are sufficiently full of information to enable Congress to decide as to the propriety of making appropriations for the improvement desired by the inhabitants. It cannot be doubted that such improvement would tend greatly to the development of trade and industrial enterprises, and contribute to the general good of that section of the country.

The improvement proposed for Mackay's Creek consists of the removal of the wreck of a small schooner, and the dredging of a channel 60 feet wide, to a depth of 7 feet, from the mouth of the creek out, until the same depth is reached in the sound, at a cost of about \$5,000.

The proper improvement for Edenton seems to be the excavation of a channel 100 feet wide and 9 feet deep, from the town to the deep water of the bay, at a cost of about \$10,000.

The obstructions to navigation near Washington, partly natural and partly artificial, are more serious than at Edenton or Mackay's Creek, owing to their extent and the cost of remedying the difficulties caused by them. Mr. Elliott's estimate contemplates the removal of 2,500 piles, sunken logs, dredging and the construction of a long dike for contracting the too broad water-way below the town, and directing the flow of the water into the dredged channel of 9 feet in depth. The cost is stated to be about \$35,000.

It is desirable for economical considerations that the whole sum be at once appropriated, in order that all the parts of the improvement may be simultaneously executed. Any smaller sum can, however, be advantageously expended.

The soundings in the sketch of Edenton Bay are all new; that of Washington is a tracing from the last Coast Survey sketch, no material change having taken place since it was made, 1872.

The sketch of Mackay's Creek contains a few new soundings, showing changes near the mouth of the creek.

The latest Coast Survey sketches of the localities are inclosed for comparison, if desired, with those now furnished.

Respectfully submitted.

WM. P. CRAIGHILL,
Major of Engineers.

Brigadier-General A. A. HUMPHREYS,
Chief of Engineers U. S. Army, Washington, D. C.

WASHINGTON HARBOR, NORTH CAROLINA.

FORT MONROE, December 18, 1872.

COLONEL: In compliance with your instructions, I have the honor to submit a report on the examination of Washington Harbor, North Carolina, made under your direction, in the month of October, 1872.

Washington, the county seat of Beaufort, is situated on the Pamlico River, some thirty miles from its mouth, where it empties into Pamlico Sound. It is the largest and most important town in this section of the State, its population being about 3,500, and it supplies the whole of the back country, for a distance of some twenty miles, in the direction of Plymouth, and for considerable distances in other directions.

The Pamlico River is known above Washington as the Tar River, and is the western boundary of the peninsula, of which the Roanoke River is the eastern. This peninsula is a section of country of great fertility, producing large quantities of grain and cotton, which are shipped on the two rivers named.

The Tar is navigable, during portions of the year, for light-draught vessels, to Tar-

borough, which is the terminus of a branch of the Wilmington and Weldon Railroad. Much of the cotton, &c., raised, is shipped, and a considerable portion of the merchandise purchased north, by the merchants of Washington, is brought down by this route, but the people complain that the rates of freight are very high, and that business is cramped in consequence, and state that if there were a channel of sufficient depth up to the town, they would soon have direct trade with New York and other northern cities, as was the case some years previous to the war.

As stated in a report on the Roanoke River, the Jamesville and Washington Railroad and Lumber Company have constructed a railroad from Jamesville, on the Roanoke, to their mills, about half the distance to Washington, and it is expected that it will be completed through, in the course of a year or two. A proposed southern air-line railroad also passes through Washington. I was promised, by a well-informed gentleman in Washington, full statistics of the productions of, and shipments from, the country in the vicinity of the place, but as yet they have not been received.

From the report of the deputy collector of customs, herewith, it appears that the total tonnage belonging to, and running from, Washington, for the past year, was about 1, 125; this statement, however, gives no adequate idea of the shipments, as there are now several steamers belonging to other places, which come there regularly, one of which runs weekly from Norfolk, and brings back, during the season, some 300 bales of cotton each trip.

The obstructions to navigation in the harbor of Washington, and in the river for some miles below the town, are shoal water, logs, and pile obstructions.

The shoal water may be attributed to the sudden widening of the river, by which the velocity of the current is reduced, and its scouring effect on the loose sand forming the bottom weakened. This can only be remedied by the construction of a dike, or dikes, to contract the channel for some distance down. A dike is indicated in blue on the sketch herewith.

The logs can be pulled out by proper machinery.

The pile obstructions consist of four rows, driven in pairs, with an interval of about 150 yards between each pair, and six and one-half miles below the town. In all 2,700 were driven entirely across the river, diagonally, at High Point. They were driven early in the war, by the confederates, and after penetrating the bottom as far as they could be made to, were sawed off 3 feet below the surface of the water. Of these piles enough have been removed to leave a passage 100 feet wide, about 250 yards from the east shore. This opening is buoyed at each corner. It is estimated that 2,500 of these piles still remain, and if it is contemplated to open the river for sailing-vessels, they should all be removed. An estimate of the cost of the improvements mentioned is submitted, should the importance of the place warrant the expenditure.

Estimate.

For 7, 100 linear feet dike, at \$2.....	\$14, 200 00
For dredging 4,000 cubic yards, at \$1.....	4, 000 00
For removing logs.....	1, 000 00
For machinery and labor to remove 2,500 piles	12, 500 00
	31, 700 00
Add 10 per cent. for contingencies	3, 170 00
	34, 870 00

Very respectfully submitted.

GEORGE H. ELLIOTT.

Colonel WM. P. CRAIGHILL,
Corps of Engineers, Baltimore, Maryland.

EDENTON HARBOR, NORTH CAROLINA.

FORT MONROE, VIRGINIA, *December 17, 1872.*

COLONEL: In compliance with your instructions, I have the honor to submit report on the survey of Edenton Bay, North Carolina, made under directions, from August 27 to August 30, 1872.

A preliminary examination of the locality showed that only a limited portion of the bay needed improvement, and to that portion the survey was confined.

Edenton, the county-seat of Chowan, is situated at the head of the bay, which is the northwestern extremity of Albemarle Sound, and immediately at the mouth of Chowan River. It is a town of considerable importance, having a population of upward of 1,000, and is the shipping point of a large area of the county. No manufactures are at

present carried on, although some years previous to the war there were two marine railways, which, I am informed, were in active operation. Sailing-vessels were then built for the West India trade, which is stated to have been, at that time, very considerable. The decay of this branch of industry and trade is, by the people of Edenton, attributed to the filling up of the bay, which rendered it very difficult, if not impossible, for vessels of the necessary draught of water to get up to the town. Judging by the Coast Survey charts, this filling up must have occurred a long time previous to the war.

The country adjacent to the town is not generally adapted to the growth of cereals, the soil being light and sandy, but especially suitable for the production of cotton and garden truck, of which large quantities are shipped annually. In the neighboring swamps and woods railroad-ties of cypress and oak, and shingles, are gotten out in considerable quantities and shipped.

On the shores of the sound and rivers in the vicinity are very extensive fisheries, some of the seines in use exceeding a mile in length.

It is estimated by a competent judge that the total value of all the shipments from Edenton in the past year is not less than \$500,000, and during the same period merchandise of various kinds was brought from the North and from foreign ports to the amount of \$300,000. In this trade quite a number of vessels, generally steamers, are engaged, the total tonnage registered at the custom-house during the last year being 75,000. In addition many vessels which stop to land or receive cargo and proceed, do not enter or clear.

The steamers run from both Baltimore and Norfolk, and pass through the Albemarle and Chesapeake Canal. There is also a steamer (side-wheel) of considerable size, which runs tri-weekly, carrying the United States mail from Franklin, on the Seaboard and Roanoke Railroad, down the Blackwater and Chowan Rivers to Edenton and Plymouth. This steamer, when fully loaded, has a draught of water of $8\frac{1}{2}$ feet, and in approaching Edenton she often has to plow her way through the sand, and not unfrequently gets aground.

As will be seen by reference to the map of the portion of the bay surveyed, herewith, the depth of water in the channel for nearly half a mile from the town does not exceed 8 feet, and in some places is only $6\frac{1}{2}$ feet. It is reported by old pilots in the neighborhood that within their recollection there was a depth of over 10 feet the whole distance. This must have been a very long time ago, for, by reference to the Coast Survey chart of 1849, it will be perceived that the channel, both as regards position and depth, has changed but slightly from that time to the present.

The trade of Edenton and the surrounding country would, no doubt, be materially benefited by an increased depth of water, and the maximum that can be used at present is fixed by the depth which can be carried over Hatteras Bar. This is now from $8\frac{1}{2}$ to 9 feet.

Should the importance of the place, in the opinion of Congress, warrant it, the improvement I would propose is the dredging of a channel 100 feet wide to a depth of 9 feet, from the town out, until that depth is reached. Such a channel is indicated on the map. The excavation necessary, including the dredging of a portion of the dock, will amount to 15,000 cubic yards. An estimate of its cost is submitted herewith. The bottom in the channel is generally of hard sand, mixed to some extent with mud, and it is probable that an excavated channel would maintain its stability for a considerable length of time.

Estimate.

For dredging to make a channel 100 feet wide and 9 feet deep, from the dock out until that depth is reached, and for dredging the dock, 15,000 cubic yards, at 60 cents	\$9,000
Add 10 per cent. for contingencies	900
	9,900

Very respectfully submitted.

GEO. H. ELLIOTT.

Colonel WM. P. CRAIGHILL,
Corps of Engineers, Baltimore, Maryland.

MOUTH OF MACKAY'S CREEK, NORTH CAROLINA.

FORT MONROE, VIRGINIA, *December 17, 1872.*

COLONEL: In compliance with your instructions, I have the honor to submit report on the examination of the mouth of Mackay's Creek, North Carolina, made, under your directions, on the 31st of October, 1872.

Mackay's Creek is a deep and narrow stream, navigable for some ten or twelve miles from its mouth, in Washington County. Its immediate course is through valuable swamp-lands, which have not been worked for lack of transportation. The neighboring country is of the same character as is generally found through this section of the State, the soil being light and sandy, and the principal production cotton. Of this staple, it is estimated, about 1,000 bales are annually raised within a radius of a few miles from what is known as Mackay's Ferry, which is now a draw-bridge, about half a mile from the mouth of the creek. This cotton has generally to be hauled to Plymouth for shipment, a distance of six or seven miles from the bridge, entailing considerable expense to the producer.

There is a saw-mill located at the bridge, producing from 6,000 to 8,000 feet of lumber daily, the greater portion of which is shipped North.

I was informed by a gentleman in Plymouth, who owns large swamps in the vicinity of the creek, that if it were opened, so that transportation were to be depended upon regularly, he would get out from his swamps from four to five million of shingles.

The improvement contemplated would make a nearer and more convenient shipping point for an extensive and important section of country, enabling the citizens to receive their supplies and ship their productions by the steamers which ply on Albemarle Sound, immediately on the creek, instead of hauling them to and from Plymouth.

Mackay's Creek empties into Albemarle Sound on the south side, about nine miles east of Roanoke light-house, and as there is an ample depth of water in it, the only improvement needed is the deepening of the channel from its mouth out until the desired depth of water is reached in the sound.

There is a small schooner sunk inside the creek, belonging to parties in Beaufort, North Carolina, which, however, could easily be removed at a very small cost.

Should the importance of the place justify the expenditure, the improvement proposed is the dredging of the present channel for a width of 60 feet, to a depth of 7 feet, from the mouth of the creek out, until that depth is reached in the sound.

It is not expected that this improvement will be permanent in its character, but as the bottom, where it is proposed to dredge, is hard sand, it will probably last for some time, and if, as is expected, many steamers pass this dredged channel, the tendency will be to keep it open.

Estimate

For dredging to make a channel 60 feet wide and 7 feet deep, from the mouth of the creek until that depth is reached in the sound, 6,500 cubic yards, at 60 cents.....	\$3, 900
Add 10 per cent. for contingencies, &c	390
	4, 290

Very respectfully submitted.

GEO. H. ELLIOTT.

Colonel WILLIAM P. CRAIGHILL,
Corps of Engineers, Baltimore, Maryland.

CUSTOM-HOUSE, EDENTON, NORTH CAROLINA,
November 22, 1872.

SIR: In reply to your letter of the 16th instant, I have the honor to furnish the following report upon such facts as bear upon the contemplated improvement of Edenton Bay and Mackay's Creek.

It would undoubtedly be of great benefit to the shipping and commercial interests of Edenton and the surrounding country to have the channel in Edenton Bay widened and deepened, and such obstructions removed as at present render its navigation difficult, and, in some instances, perhaps, hazardous. During the previous year the tonnage of steam and sail vessels entering and clearing from this port amounts to 75,000 tons. Besides these there have been a number of vessels touching at this port, without sufficient merchandise to require them to enter or clear. Edenton Bay is a safe and commodious harbor for vessels plying the Albemarle Sound and the Roanoke and Chowan Rivers.

In order to give you an idea of the amount of commerce carried on from this port, I would respectfully state that, from the most reliable and authentic sources, it is ascertained that the exports to foreign and northern markets of domestic produce, such as cotton, corn, peas, lumber, shingles, fish, and garden truck, will, no doubt, approximate the sum of \$500,000.

The imports of merchandise from foreign ports, the northern cities, the Virginia and Maryland markets, will estimate, on a low calculation, the sum of \$300,000.

Mackay's Creek, in Washington County, is an important point, and the improvement contemplated there will be advantageous to the shipping and commercial interests of that section, furnishing for the population of that county and the surrounding counties, in many instances, a more convenient and expeditious shipping point than Plymouth. We may also consider the vast amount of timber and shingles which would be more easily accessible if the improvement is made as designed. Mackay's Creek is situated in a fine agricultural section.

These facts embrace the most important information bearing upon the contemplated improvements of Edenton Bay and Mackay's Creek, while there may be other considerations of minor importance to show the necessity and advantage of the improvements.

Should you desire any additional information on the subject, it will afford me pleasure to furnish it, if in my power.

Very respectfully, your obedient servant,

CHARLES G. MANNING,
Collector.

Mr. GEORGE H. ELLIOTT,
United States Engineer Office, Fort Monroe, Virginia.

CUSTOM-HOUSE, WASHINGTON, NORTH CAROLINA,
December 5, 1872.

Hon. GEORGE H. ELLIOTT, *Fort Monroe, Virginia:*

Your letter came safe to hand, and I am sorry I have been forced to delay, as I did not have my records to hand, and at this, my first chance, reply. The tons belonging and running to and from this (Washington) subdivision of collector's district of Pamlico, North Carolina, is about 1,125. Sorry I could not answer sooner.

I am yours, truly,

J. B. RESPESS,
Deputy Collector and Inspector.

VII.—WAUKEGAN HARBOR, ILLINOIS.

UNITED STATES ENGINEER OFFICE,
Chicago, Illinois, January 2, 1873.

GENERAL: I have the honor to submit herewith the accompanying report of an examination of Waukegan Harbor, Illinois, called for by the act of Congress approved June 10, 1872.

There is no harbor whatever at this point. A small creek empties into the lake, but has no value for harbor purposes. A harbor at Waukegan must be entirely artificial.

There are no natural features which would suggest a harbor at this place. Its commerce has been carried on from bridge-piers in the open lake. An attempt was made to construct a harbor at Waukegan in 1855. The plan was a breakwater parallel to the shore, covering the heads of the bridge-piers. It appears that one crib 30 feet long and 25 feet wide was placed in position. This was afterwards carried away by a storm. Since that time nothing has been done. A survey of the lake, in the vicinity of Waukegan, was made, under the direction of Colonel Graham, in 1855. A copy of the map of this survey accompanies this report, and the soundings taken the past season are plotted on it, so as to show the changes which have taken place. It appears that the shore-line has advanced about 23 feet, and that the depth of water is less than in 1855. This is due to the drift of sand and shingle, which takes place constantly along the southern end of Lake Michigan, and is caused by northeast storms.

The local commerce of Waukegan, as set forth in the accompanying report, does not warrant any expenditure by the Government for a harbor at this locality.

A harbor of refuge, however, affording easy access to vessels of all classes would be of great benefit to commerce. The nearest harbors are Chicago, thirty-six miles south, and Kenosha, sixteen miles north. The latter harbor is not at present deep enough to admit vessels of the largest class, and the nearest harbor north, affording security to vessels of all classes, is Milwaukee, which is about fifty miles north of Waukegan. There is thus a length of coast of eighty-six miles, where vessels of the larger class can find no harbor. It does not follow that Waukegan is the best point for such a harbor. Should it be thought that a harbor of refuge is needed in this part of the lake an examination should be made of the coast for the purpose of selecting the most suitable location.

A plan for an outside harbor is indicated on the accompanying map. It consists of a breakwater 2,000 feet in length, placed nearly parallel to the shore, and two piers. The north pier connects the northern end of the breakwater with the shore. The south pier connects a point 500 feet south of the southern end of the breakwater with the shore, so as to leave an entrance to the harbor 500 feet wide. As there is no sheltered place for constructing cribs in the vicinity, it is proposed to obtain shelter by constructing the pier marked A B, and dredge out the bed of the stream, to make a basin of sufficient width and depth for the purpose. This pier may be built of piles, and need not exceed 700 feet in length. The construction of this pier, and the same length of the south pier, with the excavation of the bed of the stream, would afford a harbor sufficient for all local purposes at a cost of about \$75,000.

In constructing this harbor the first thing to be done is to put in the two piers A B and C D, which should be pile-piers. As soon as the piers are extended out to about 8 feet depth of water the dredging of the channel should be commenced. The dredging and pier extension should then be carried on until the room required for constructing cribs for the breakwater is obtained. The breakwater and piers in depth of water greater than 16 feet should be of cribs 50 feet long and 30 feet wide; in less than 16 feet depth, and over 12 feet, 50 feet long and 20 feet wide. The piers inside of the 12-foot curve should be of pile-piers, as adopted at other harbors.

The estimated cost of the harbor is as follows:

17 cribs, 50 feet by 20 feet, at \$300	\$51, 000
85 cribs, 50 feet by 30 feet, at \$700 ..	595, 000
2,250 feet pile-pier, at \$30 per running foot	67, 500
100,000 cubic yards of dredging, at 30 cents.....	30, 000
	743, 500
Add 10 per cent. for contingencies.	74, 350
	817, 850

I am, general, very respectfully, your obedient servant,

D. C. HOUSTON,

Major of Engineers, United States Army.

Brigadier-General A. A. HUMPHREYS,

Chief of Engineers, U. S. A., Washington, D. C.

UNITED STATES ENGINEER OFFICE,
Chicago, Illinois, December 14, 1872.

MAJOR: I have the honor to submit herewith my report on the survey of Waukegan Harbor, Illinois.

In pursuance with written instructions, received and dated July 1, 1872, I proceeded to Waukegan, Illinois, after the close of my survey at Pensaukie, Wisconsin, arriving there on the 31st of July, 1872.

Waukegan is situated on the west shore of Lake Michigan, thirty-six miles north from Chicago, and is mostly built on land having an elevation of from 40 to 60 feet above the lake; it contains a population of about five thousand. It has nine churches, five school-houses, two flouring-mills, two planing-mills, three tanneries, one post-office, five hotels, and one court-house.

There is a small creek that runs through the southern portion of the city, and empties into the lake, which was much larger than at present, but is now almost extinct, the average depth of which will not exceed 18 inches during the summer,

Present improvement.—This consists of a bridge-pier which was built over eighteen years ago. It extends into Lake Michigan to a depth of 12 feet, and is 700 feet in length, 500 feet extending into the lake beyond the shore-line. This pier, which is in a very dilapidated condition, is all the facility afforded for the shipping interest, and at present is adequate for the amount of commerce carried on. All the shipping at this point is done over this pier, which is maintained by private enterprise, and is exposed to the inconvenience of wind and sea. At some seasons of the year no landing can be made. The only business of any consequence done over this pier is lumber, which is received, there not being any exports made by water.

The character of the lake-bottom is sand at a depth of 17 feet; from that depth out it is mostly clay and loose stone, affording good holding-ground. Soundings were taken and examinations of the lake-bottom made out to the depth of 25 feet.

The benefits to be derived from making a harbor at this place will be entirely local. There is no apparent necessity for a harbor in this locality, as vessels can ride at anchor during the heaviest storms, besides which Kenosha Harbor, sixteen miles north, affords a good harbor with 8 feet depth of water.

The nearest harbor south is Chicago, thirty-six miles distant, and there is no harbor between Chicago and Milwaukee that vessels drawing over 10 feet can enter, Milwaukee being fifty miles north, leaving then eighty-six miles of coast which affords no shelter during heavy storms to the large class of the fleet which frequent this locality.

The large expenditure necessary for the improvement and construction of a harbor at this point, owing to the very light commerce, would make it impracticable, and the demands of the place would not sufficiently warrant any large expenditure, though the improvement of this harbor in some manner might be of great benefit to commerce in general.

All the grain shipped, and other mercantile business which is carried on, is done over the Chicago and Northwestern Railroad, which runs directly through the place and apparently supplies all commercial demands.

Waukegan is included in the collection district of Chicago, which is the nearest port of entry. The nearest light-house north is at Kenosha, sixteen miles distant.

In taking the soundings two instruments were used, one of which was in charge of Assistant G. A. M. Liljecrantz; in this manner each sounding was located accurately.

The receipts for the year ending December 31, 1871, are as follows: Lumber 5,000,000 feet; bark 700 cords.

The number of arrivals and departures of vessels was 50.

I am, major, very respectfully, your obedient servant,

WILLIAM J. BRYSON,
Assistant Engineer.

Major D. C. HOUSTON,
Corps of Engineers, U. S. A., Chicago, Illinois.

VIII.—SURVEY OF PENSUKIE RIVER, WISCONSIN.

UNITED STATES ENGINEER OFFICE,
Chicago, Illinois, January 7, 1873.

GENERAL: I have the honor to submit the accompanying report of a survey of the Pensaukie River, Wisconsin.

The Pensaukie River empties into Green Bay about twenty-five miles from the mouth of the Fox River, on the west side of the bay. There are three saw-mills near the mouth of the river, which are at present the basis of the business of the place. The owner of these mills has ex-

pended about \$40,000 in improving the river and its mouth by dredging and constructing a pier in the bay to protect the channel. Vessels drawing 5 feet can now enter the river. The object of making an improvement of the mouth of this river is simply to enable vessels navigating the lake to enter the river. For this purpose it is necessary to deepen the channel by dredging, and construct piers to prevent the channel from filling up.

There is a reef about one and a half miles north of the river-mouth which breaks the force of storms, so that a cheaper method of constructing piers can be resorted to here than in Lake Michigan or other localities in the bay.

It is believed that a slab-pier is all that is necessary. The slabs are placed in the pier in layers of various thickness, the layers crossing each other at right angles. For greater security a row of piles is driven on each side of the pier, the piles being 4 feet apart from center to center. The width of the pier is made about 20 feet in less than 9 feet of water, and 30 feet in over that depth.

As the exposure is mainly from the north, it will not be necessary to protect the channel on the south side, except near the shore, and it may be found that the north pier may only need extending out to a depth of 9 or 10 feet.

There is very little demand for this improvement so far as concerns the security of vessels, but it will serve to develop the business of the place and of that section of the country.

With what has already been done, and the favorable locality, the cost of the improvement will be comparatively small.

The estimated cost of a 9-foot channel is \$133,852.40. The cost of a 12-foot channel is \$201,852.31.

I am, general, very respectfully, your obedient servant,

D. C. HOUSTON,

Major of Engineers, United States Army.

Brigadier-General A. A. HUMPHREYS,

Chief of Engineers, United States Army, Washington, D. C.

UNITED STATES ENGINEER OFFICE,
Chicago, Illinois, December 4, 1872.

MAJOR: I have the honor to submit herewith my report on the survey of the mouth of the Pensaukie River, Wisconsin.

In accordance with written instructions, received and dated July 1, 1872, I proceeded to Pensaukie, Wisconsin, but, owing to unforeseen circumstances, was deterred from reaching there until the 12th of July, when I immediately commenced operations.

The Pensaukie River has its mouth on the west coast of Green Bay, at a point twenty-five miles north of Green Bay City. Its length is about thirty-six miles, and takes its rise in a small lake in Shawanaw County. About fourteen miles from its mouth it diverges into two streams, termed the North and South branches.

The town of Pensaukie is located near the mouth of the river, in Oconto County, and has a population of 1,250. It contains three saw-mills, one flouring and grist mill, one shingle-mill, one planing-mill, three hotels, one of which is a three-story and basement brick building, having accommodations for about two hundred guests, and is the finest house north of Milwaukee. There is also one church and school-house, one post-office, one telegraph-office, and one store doing an average yearly business of \$100,000.

Six miles from the mouth there is located a large shingle factory, capacity of which is 12,000,000.

The business is mostly lumber, which is shipped in large quantities to Chicago and Milwaukee. On account of the shallow water in the river, vessels come to anchor in Green Bay, abreast of the river, and lumber-rafts are towed to them.

The Chicago and Northwestern Railroad runs directly through the town, and a large amount of lumber and produce is shipped north and south.

There is in progress of construction a branch railroad, which will run from Stiles,

to connect with the Chicago and Northwestern Railroad at Pensaukie, a distance of seven miles; and also a road in contemplation from Little River, about six miles, making it at once a railroad center.

Present improvement.—This consists of a pile-pier, filled with slabs, which was built about three years ago. It extends into the bay to a depth of 5 feet, and is 1,000 feet in length. In connection with this, there have been constructed over 1,500 feet of slab-pier over the low marsh, which extends along the shore, all of which is built in the very best manner, making a substantial structure. In addition to this, there has also been a large amount of dredging done in the river for about half a mile from the end of the pier, making the channel an average depth of 9 feet. The inner portion of this pier was built three years ago, and the outer portion was finished one year after, during which time it has proved its durability, still remaining in a well-preserved condition. All of this improvement has been carried on under the supervision and with the means of private individuals, at an outlay of \$40,000.

No better farming land can be found anywhere in the State than in this portion of the country. The country bordering on the river is undulating and has a fertile soil. Along its banks and adjacent thereto we find heavy timber-land of maple, beech, oak, and a large amount of pine. Very little waste land or land unadapted to profitable cultivation is to be found; and what there is, is mostly confined to the immediate vicinity of the lake-shore. About four miles from the mouth is to be found a tract of land, bordering on the river, and extending back for over ten miles, that five years ago was covered with a dense growth of timber, most of which has cleared, and is now under cultivation, producing wheat and other cereals unsurpassed in any other section of the country.

Above the town the river is not navigable, being used entirely for logging purposes, there being four dams, the first half a mile from the town, all of which are used to facilitate logging.

Pensaukie is included in the collection district of Milwaukee, which is the nearest port of entry. The nearest light-house south is Green Bay, twenty-five miles distant.

The benefits to be derived from making a harbor of this place would be to add materially to the manufacturing and agricultural interests already developed in that section of the country, besides affording a shelter to a large number of vessels which frequent that locality. All the shipping at this point is now exposed to the inconvenience of wind and sea during all seasons of the year. There is no harbor on the west coast of the bay between Green Bay City and Peshigo, a distance of forty miles. There is, then, forty miles of coast which affords no shelter during heavy storms to the large fleet which frequents this locality.

The natural facilities which this harbor affords, is the protection which it receives on the northeast from the "Oconto Bar," making a natural harbor.

Though the entrance to the river shoals out a long distance, and would require a large amount of dredging to make it accessible, there would require very little, if any, expense to keep an open harbor, on account of the solidity of the sand, which seldom, if ever, moves.

A thorough examination of the lake-bottom was made out to a depth of 15 feet, at that depth from the shore out, the sand was found very solid, with an occasional deposit of gravel.

Soundings were taken in the bay out to a depth of 15 feet. In the river, soundings were taken on cross-lines 50 feet apart, and every 20 feet. The character of the bottom of the river is principally sand, with a deposit of black mud, chiefly composed of decayed vegetable matter.

Owing to the close proximity to the mouth of the first dam, there is no current in the river, except during the spring freshets or a very heavy rain.

The steamers Union and Oconto make daily trips from Green Bay City and touch at Pensaukie.

Appended to this report is a statement of the shipments and receipts for the year ending December 31, 1871.

Amount of exports at Pensaukie, Wisconsin.

Lumber, 16,250,000 feet	\$195,000 00
Shingles, 42,000,000	115,500 00
Laths, 5,218,000	10,436 00
Flour, 1,000 barrels	6,000 00
Bark, 1,250 cords	5,000 00
Cedar posts, 28,000	1,680 00
Fish, 18,000 barrels	171,000 00
	504,616 00

Imports at Pensaukie, Wisconsin.

General merchandise	\$100,000 00
Lime, 3,000 barrels	3,000 00
	103,000 00

The number of arrivals and departures of vessels was 250.
 Previous to this date the railroad was not completed to Pensaukie.
 Estimates for this improvement are herewith respectfully submitted.

For a 12-foot channel extending north pier out to a depth of 12 feet, and south pier to a depth of 9 feet:

28,086 cords slabs, at \$3	\$84,258 00
5,200 piles, at \$5	26,000 00
244,147 cubic yards of dredging, at 30 cents	73,244 10
	183,502 10
Add 10 per cent. for contingencies	18,350 21
Total	201,852 31

For a 9-foot channel, extending north and south piers to a depth of 10 feet:

13,937 cords slabs, at \$3	\$41,811 00
3,500 piles, at \$5	17,500 00
207,910 cubic yards of dredging, at 30 cents	62,373 00
	121,684 00
Add 10 per cent. for contingencies	12,168 40
Total	133,852 40

I am, major, very respectfully, your obedient servant,

WILLIAM J. BRYSON,
Assistant Engineer.

Major D. C. HOUSTON,
Corps of Engineers, United States Army, Chicago, Illinois.

IX.—REMOVAL OF WRECKS FROM THE YAZOO RIVER, MISSISSIPPI.

ENGINEER OFFICE, UNITED STATES ARMY,
Saint Louis, Missouri, January 27, 1873.

GENERAL: I have the honor to forward herewith a copy of report of Mr. I. D. McKown, civil engineer and assistant, upon an examination of the Yazoo River, in Mississippi, made with a view to ascertain the cost of removing from that river the wrecks of vessels sunk there during the war, as required by act of Congress approved June 10, 1872.

Mr. McKown reports the existence of nineteen wrecks which are obstructions to navigation, and recommends the removal of eight of them as being the worst obstructions. He places the cost of such removal at \$5,000 per wreck, or \$40,000 for the eight.

In view of the importance of the commerce of this stream, I concur with Mr. McKown in his recommendations.

Very respectfully, your obedient servant,

J. H. SIMPSON,

Colonel of Engineers, United States Army.

Brigadier-General A. A. HUMPHREYS,
Chief of Engineers, United States Army.

UNITED STATES ENGINEER OFFICE,
Saint Louis, Missouri, January 22, 1873.

COLONEL: I have the honor to submit the following report of the examination of the wrecks of gun-boats, steamers, and other obstructions placed in the Yazoo River during the war.

The Yazoo River is formed by the junction of the Tallahatchie and Yalabusha Rivers, about two hundred and sixty miles above its confluence with the Mississippi. It flows through a fine cotton-raising district, and it is estimated that from 120,000 to 150,000 bales of cotton are made annually in the valley of the Yazoo and its tributaries.

There are about forty wrecks in the river, but only nineteen can be considered obstructions at present, and that come under the head of obstructions placed in the river during the war.

The following tabulated statements contain—

First. A list of all the wrecks that were placed in the river during the war and that are at present obstructions to navigation.

Second. A list of the wrecks that are the worst obstructions to navigation, and the removal of which would materially improve the condition of the stream.

I have not included the gun-boat Cairo in either of the statements, as she has about 5 feet of water over her at low water, and can hardly be classed as an obstruction. She lies about fifteen miles from the mouth of the river, and has all her guns and machinery on board.

Statement of wrecks sunk in Yazoo River during the war that are at present obstructions to navigation.

No.	Name.	Position.	Description.
1	Paul Pry	62 miles above the mouth.....	Packet.
2	Lady Byron.....	65 miles above the mouth.....	Do.
3	Capitol	Liverpool Landing	Do.
4	Van Dorn.....	do	Gun-boat.
5	Ivy	Near Liverpool	Packet.
6	Unicorn	5 miles above Liverpool	Do.
7	Hope	20 miles below Yazoo City.....	Do.
8	Mobile	15 miles below Yazoo City.....	Do.
9	De Kalb	Near Yazoo City	Gun-boat.
10	Magenta	5 miles above Yazoo City.....	Packet.
11	Magnolia	do	Do.
12	Peytona	Near Haines's Landing.....	Do.
13	Natchez	1 mile below Bertonia	Do.
14	John Walt.....	Side by side near Southwart's Landing	Packets.
15	R. J. Lackland		
16	Golden Age.....		
17	Scotland	2 miles below Greenwood.....	Packet.
18	Mary E. Keene.....		
19	Arcadia	1 mile above Greenwood.....	Do.

Statement of wrecks sunk during the war that are the worst obstructions to navigation.

No.	Name.	Position.	Description.
1	Van Dorn.....	Liverpool Landing	Gun-boat.
2	Ivy	Near Liverpool.....	Packet.
3	Magenta.....	5 miles above Yazoo City.....	Do.
4	Magnolia	do	Do.
5	Natchez	1 mile below Bertonia	Do.
6	R. J. Lackland.....	Near Southwart's Landing	Do.
7	Golden Age.....	do	Do.
8	Arcadia	1 mile above Greenwood.....	Do.

Taking into consideration the fact that most of the wrecks are in shallow water, and are well exposed at a low stage, I should estimate the cost of removal at \$5,000 per wreck, making the total cost of removal as follows: Nineteen wrecks, at \$5,000 each, \$95,000.

In consideration of the amount of steamboat traffic on the Yazoo River, I would

respectfully recommend the removal of at least the eight wrecks mentioned as the worst obstructions, the estimated cost of which would be \$40,000.

In the above estimates no consideration has been taken of the value of recovered material.

Very respectfully, your obedient servant,

I. D. McKOWN,
Civil Engineer Assistant.

Colonel J. H. SIMPSON,
Corps of Engineers, United States Army.

○

COLUMBIA HOSPITAL FOR WOMEN.

LETTER

FROM THE

ACTING SECRETARY OF THE INTERIOR,

RELATIVE TO

*An appropriation for the completion of the Columbia Hospital for Women,
in the District of Columbia.*

JANUARY 30, 1873.—Referred to the Committee on Appropriations and ordered to be printed.

DEPARTMENT OF THE INTERIOR,
Washington, D. C., January 27, 1873.

SIR: I have the honor to transmit herewith a copy of a letter of this date from Dr. J. H. Thompson, surgeon-in-chief of the Columbia Hospital for Women, in the District of Columbia, submitting an estimate of appropriations, amounting to the sum of \$15,000, prepared by the Architect of the Capitol, which will be required in the completion of the alterations now being made in said hospital.

The subject is respectfully submitted for favorable consideration by Congress.

Very respectfully, your obedient servant,

B. R. COWEN,
Acting Secretary.

Hon. JAMES G. BLAINE,
Speaker of the House of Representatives.

COLUMBIA HOSPITAL,
Washington, D. C., January 27, 1873.

SIR: I have the honor to inclose herewith the estimate of Edward Clark, the Architect of the Capitol extension, for the completion of the alterations now being carried on at Columbia Hospital.

I would most respectfully ask for your approval and recommendation to Congress for the passage of the necessary appropriation.

I have the honor to be, very respectfully, your obedient servant,

J. H. THOMPSON,
Surgeon-in-Chief.

Hon. COLUMBUS DELANO,
Secretary of the Interior.

ARCHITECT'S OFFICE, UNITED STATES CAPITOL,
Washington, D. C. January 21, 1873.

GENERAL: Having estimated the cost of the work necessary to complete the building known as the Columbia Hospital for Women, I find that to finish the work now in progress, to put in a steam-heating apparatus, to remodel the upper stories in order to have more rooms, and to ventilate the building properly, the further sum of \$15,000 will be required.

I am, very respectfully, your obedient servant,

EDWARD CLARK, *Architect.*

Surgeon-General J. K. BARNES,

Chairman Building Committee, Columbia Hospital.

EXAMINATION OF CANDIDATES FOR CLERKSHIPS IN THE
WAR DEPARTMENT.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The questions propounded by the examiners to the candidates for appointments and promotions to clerkships in his Department.

JANUARY 30, 1873.—Referred to the Select Committee on the Re-organization of the Civil Service of the United States and ordered to be printed.

WAR DEPARTMENT, *January 28, 1873.*

The Secretary of War has the honor to transmit herewith to the House of Representatives, in accordance with the resolution of the 27th instant, directing that a copy of all the questions propounded by the examiners to the candidates for appointments and promotions to clerkships be furnished; a list of the questions used in the last examination of January 24, 1873, for appointment to fill vacancies in the War Department.

The questions used at each examination vary, but the copy furnished is of a like character to those used in all the examinations previously had.

In cases of promotion they are also similar, with the exception that questions relating to office duties are added thereto.

To give all the questions that have been used would be a work of great labor, and require considerable time to copy.

WM. W. BELKNAP,
Secretary of War.

Questions used for examination of applicants for first-class clerkships in War Department, January 24, 1873.

1. Write a letter addressed to the board of examiners stating previous occupation.

2. Correct grammatical errors in the following sentences :

Make no more mistakes than you can help.

He is a scholar and a gentleman.

Benedict Arnold, who is now another name for traitor, was despised by Englishmen and Americans.

Let you and I be henceforth friends.

His character as well as opinions were assailed.

3. Correct the orthography of the following words :

Disbursement, employeys, traveler, pierce, immagineable, mohogany, miselaneous, consumation, inflammation, incomprihensable, porticoes, sucesion, wagon, misspell, license, irrepareable, heighth, disenfranchise, extraordinary, comemorate.

4. Give the abbreviations of the following :

Anno Domini, honorable, colonel, shilling, degrees, seconds, et cetera, plus, equivalent to, package, bushel, department, merchandise, interest.

5. Copy the following, using proper capitals and punctuation :

office of chief quartermaster fort leavenworth kansas november 29 1872 by direction of the chief quartermaster military division of the missouri the advertisement of this office dated november 7 1872 inviting proposals for transportation of military indian and government supplies to fort sill indian territory and forts richardson and griffin texas for the year ending december 31 1873 is hereby withdrawn the service will soon be advertised for by lieutenant colonel s b hollabird chief quartermaster department of texas at san antonio texas stewart van vleit assistant quartermaster general u s a chief quartermaster department of the missouri.

6. Multiply 895.26 by 42.003.

7. Divide 37.68 by 94.0092.

8. Divide $\frac{4}{7}$ of $\frac{5}{8}$ by $\frac{4}{7}$ of $\frac{14}{16}$ and give the result in vulgar and decimal fractions.

9. Write, in figures, two millions and eighty-three ten thousandths. Express fractions in decimals.

10. What is the interest on \$947.62 for 65 days at $7\frac{3}{10}$ per cent. per annum?

11. What is the value of \$1 of currency when gold is $13\frac{1}{2}$ per cent. premium?

12. The population of the United States in 1840 was 17,069,453, and in 1850 was 23,191,876. What was the percentage of increase?

13. Make out an account, in the name of Richard Robinson, against the United States, for the following: 43,292 pounds of hay, at \$14.50 per ton; 8,506 pounds oats, at $62\frac{1}{2}$ cents per bushel, (32 pounds;) 247 cords 5 feet wood, at \$7.25 per cord; 524 tons coal, at \$9.20 per ton; 70,586 feet lumber, at \$15.37 per thousand; 475 quires paper, at \$3.25 per ream; transporting 84,985 pounds freight to Fort Bridger, Utah Territory, from Omaha, Nebraska, 915 miles, at \$1.12 per 100 pounds per 100 miles.

14. Add the following column of figures:

924, 847, 273, 798. 56
837, 328, 965, 734. 43
46, 249, 874, 629. 75
3, 086, 473, 746. 29
209, 543, 479, 954. 07
746, 847, 768, 643. 23
322, 539, 289, 945. 78
99, 094, 877, 659. 85
745, 583, 970, 584. 07
923, 895, 489, 087. 95
78, 673, 708, 956. 84
497, 958, 693, 413. 32
874, 725, 314, 859. 69
906, 437, 793, 876. 43
692, 314, 916, 735. 76
837, 805, 146, 453. 35
576, 483, 387, 496. 94
398, 876, 849, 150. 42
51, 593, 507, 834. 05
795, 174, 673, 925. 13
84, 639, 978, 649. 09

15. Under what governments were the early expeditions made to America?

16. Name the three earliest settlements made in America.

17. Name some of the engagements occurring between the Colonists and British forces prior to the declaration of independence.

18. What officer was in command of the United States forces in Mexico at the termination of the Mexican war?

19. Who was Secretary of War during the war with Mexico?

20. Name the States bordering on the Gulf of Mexico.

21. Name the State having the largest area, and the one having the smallest area.

22. Name the principal rivers emptying into the Mississippi.

23. Give the capitals of the following States: Connecticut, New Jersey, Illinois, Georgia, Michigan, and Missouri.

24. Where is Kansas City?

25. Under what circumstances can the writ of *habeas corpus* be suspended?

26. Name the divisions of the judiciary of the United States.

27. If a vacancy occurs in the United States Senate during the recess of the legislature of the State in which the vacant Senatorship occurs, how is the vacancy filled?

28. What are the conditions under which the two Houses of Congress may adjourn?

29. In what respect does the legislature of the District of Columbia differ in its formation from the legislatures of the Territories?

REPORT OF IMMIGRANTS.

L E T T E R

FROM

THE SECRETARY OF THE TREASURY,

RELATIVE TO

An act to transfer the duty of making an annual report of immigrants in the United States from the Department of State to the Treasury Department.

JANUARY 30, 1873.—Referred to the Committee on Foreign Affairs and ordered to be printed.

TREASURY DEPARTMENT,
January 28, 1873.

SIR: I have the honor to inclose herewith a copy of a letter addressed to me by the chief of the Bureau of Statistics, under date of the 24th instant, calling my attention to a draught of an act to transfer the duty of making an annual report of immigrants in the United States from the Department of State to the Treasury Department.

In connection with this letter I respectfully refer to my previous letter, addressed to you on the 28th of March last, inclosing sundry papers on the same subject.

I again submit the matter to Congress with the recommendation that it receive favorable consideration.

Very respectfully, your obedient servant,

GEO. S. BOUTWELL,
Secretary.

HON. JAMES G. BLAINE,
Speaker of the House of Representatives.

TREASURY DEPARTMENT,
BUREAU OF STATISTICS,
January 24, 1873.

SIR: The draught of an act to transfer the duty of making an annual report of the arrival of immigrants in the United States from the State Department to the Bureau of Statistics, was submitted at the last session of Congress with your approval as well as that of the Secretary of State, but, I am informed, has not yet been reported upon by the

Committee on Commerce of the Senate. It is particularly desirable that the transfer should be made, in lieu of the fact that in the custom-house in New York two or three clerks are employed in transcribing copies of the manifests for the Department of State who should be relieved from that work, as their services are absolutely necessary in the preparation of statistics for this Bureau. Returns of the arrival of passengers from foreign countries are already made to this Bureau, and classified statements, made therefrom, published not only annually but quarterly. The clerical labor of copying the lists of passengers of all the various vessels which bring immigrants to our shores is altogether unnecessary.

The returns of immigration made to this Bureau are brought more directly under the rigid system of scrutiny exercised by it over all returns received from officers of customs, and the errors and omissions in such statements easily ascertained, and prompt corrections obtained.

I respectfully suggest that you bring to the notice of the Committee on Commerce the urgent necessity there is for the legislation referred to.

Very respectfully yours,

EDWARD YOUNG,
Chief of Bureau.

Hon. GEORGE S. BOUTWELL,
Secretary of the Treasury.

○

UNEXPENDED BALANCES OF APPROPRIATIONS.

LETTER

FROM

THE SECRETARY OF THE TREASURY,

TRANSMITTING

A statement showing the balances of appropriations unexpended on June 30, 1872, the amount appropriated for the service of the fiscal year ending June 30, 1873, &c.

JANUARY 30, 1873.—Referred to the Committee on Appropriations and ordered to be printed.

TREASURY DEPARTMENT,
Washington, D. C., January 16, 1873.

SIR: In compliance with the provisions of the eighth section of the act approved May 1, 1820, (3 Stat., 568,) I have the honor to transmit herewith statements showing the balances of appropriations unexpended on the 30th of June, 1872; the amounts appropriated for the service of the fiscal year ending June 30, 1873; the net expenditures for the quarter ended September 30, 1872, and the estimated amounts that may be required to complete the service of the year, or of prior years, or that may be carried to the surplus fund.

The balances of appropriations contained in the statement marked A are not limited by law to fiscal years; those included in statements B and C are limited to the fiscal years for which the appropriations were made; and the appropriations contained in statement D, made for the present fiscal year, are subject to the provisions of the fifth section of the act of July 12, 1870, (16 Stat., 251,) and can be expended only for the service of the current fiscal year.

I am, very respectfully,

GEO. S. BOUTWELL,
Secretary.

Hon. JAMES G. BLAINE,
Speaker of the House of Representatives.

UNEXPENDED BALANCES OF APPROPRIATIONS.

A.—Statement of balances of appropriations July 1, 1872, made for fiscal year ended June 30, 1872, and appropriations made for the service of the fiscal year 1873—not limited by law to fiscal years—together with a statement of the amounts expended during the first quarter of the year and the amounts available for the service of the three remaining quarters of the year.

Appropriations.	Balances at commencement of current fiscal year, July 1, 1872.	Appropriated for the service of the current fiscal year.	Available for the service of the current fiscal year.	Repayments in excess of expenditures during first quarter of current fiscal year.	Expended during first quarter of current fiscal year.	Estimated amounts required for remaining three quarters of the fiscal year.	Amounts which may be carried to the surplus fund.

A.—Statement of balances of appropriations July 1, 1872, made for fiscal year ended June 30, 1872, &c.—Continued.

Appropriations,	Balances at commencement of current fiscal year, July 1, 1872	Appropriations for the service of the current fiscal year.	Available for the service of the current fiscal year.	Repayments in excess of expenditures for current fiscal year.	Expended during first quarter of current fiscal year.	Estimated amounts required for remaining three quarters of the fiscal year.	Amounts which may be carried to the surplus fund.
	\$178, 152 79 4, 937 50	 \$277, 357 45	\$113, 052 78 4, 937 50	 \$2, 857 33	 2, 989, 076 61	\$113, 052 78 4, 875 00	
INTERIOR—PENSIONS AND INDIANS—Continued.							
Navy pension fund							
Maintenance and education of Helen and Heloise Lincoln							
Total Interior, Pensions, and Indians	9, 922, 890 67	\$277, 357 45	10, 135, 148 12	\$2, 857 33	2, 989, 076 61	7, 155, 139 24	

NOTES TO TABLE A.

* These accounts belong to the class known as "indefinite," and therefore no balances can appear. The amounts expended are credited to the accounts at the close of the year.

† War, \$16,000. This is an apparent and not an actual overdraft. The amount of the appropriation was advanced to a disbursing-officer and repaid back to the Treasury, and again drawn out before it appeared as a credit upon the books from which these balances were taken.

‡ Interior Indian appropriations. These amounts were appropriated May 20, 1872, and placed to the credit of these appropriations June 24, 1872, and are merged in the balances of June 30, 1872, or have been drawn against, not being limited by law to fiscal years.

§ This amount was erroneously carried to the surplus fund. A re-appropriation has been requested to balance the account.

|| Navy pension fund. \$65,100 were transferred by appropriation warrant under act of Congress to an account for support of the naval asylum at Philadelphia, thereby reducing the available balance by this amount.

B.—Statement of balances of appropriations July 1, 1872, made for the service of the fiscal year ended June 30, 1871, and prior years, limited by the terms of the 5th section of the act of July 12, 1870, (16 Stat., 251,) to the service of the year for which the appropriations were made, together with a statement of the amounts expended during the first quarter of the current fiscal year, and the amounts which may be carried to the surplus fund.

Appropriations.				
	Balances unexpended June 30, 1872.	Net expenditures during quarter ended September 30, 1872.	Excess of repayments during the quarter ended September 30, 1872.	Amounts which may be carried to the surplus fund.

List of contracts made by the Engineer Department and received at the office of the Chief of Engineers during the year 1872, required by the fifth section of the act of April 21, 1808, chapter 48, to be annually reported to Congress, together with those made in 1871 not heretofore reported.

Contractors.	Date.	Objects and terms of contracts.
Leverich & Gardiner, with Major John M. Wilson, Corps of Engineers.	Nov. 6, 1871	For furnishing Canada white-pine timber and plank for the improvement of Oswego Harbor, New York, at \$23 per 1,000 feet, board-measure. Contract expired June 20, 1872, and under extension August 1, 1872.
John M. Foote, with Major W. P. Craighill, Corps of Engineers.	Jan. 5, 1872	For furnishing machinery and appliances and removing rocks from the bed of the Roanoke River, North Carolina, at \$11.45 per cubic yard. Contract expired January 1, 1873.
Albert Blaisdell, with Major Walter McFarland, Corps of Engineers.	Nov. 10, 1871	For furnishing all machinery and appliances and improving the Tennessee River between Kingston and Chattanooga, at, for each snag or sunken log removed, \$10; each cubic yard of sand, gravel, or earth excavated, \$1; construction of riprap dams, per cubic yard, \$2.75; removal of solid rock, per cubic yard, \$4; removal of loose rock or bowlders, at, for each cubic yard, \$2.75; removal of locality. Contract expired under extension December 31, 1872.
Post & Henderson, with Major John M. Wilson, Corps of Engineers.	Feb. 14, 1872	For furnishing sawed Canada or Norway white-pine timber for improvement of Little Sodus Harbor, New York, at per cubic yard, \$2.75 and \$3.75, according to locality. Contract expired June 30, 1872.
Charles J. De Graw, with Major John M. Wilson, Corps of Engineers.	Feb. 19, 1872	For furnishing 148,200 feet, board-measure, of sawed, 12 inches square, hemlock timber, delivered and piled, for im-
James McLean, with Major John M. Wilson, Corps of Engineers.	Feb. 22, 1872	provement of Little Sodus Harbor, New York, at \$17.40 per 1,000 feet, board-measure. Contract expired under extension August 1, 1872.
T. A. McLaughlin, with Major O. E. Babcock, Corps of Engineers.	Mar. 13, 1872	For furnishing material and labor for improvement of the harbor of Charlotte, New York, at, for Canada or Norway white-pine timber, per 1,000 feet, board-measure, \$20; oak snubbing-posts, per 1,000 feet, board-measure, \$45; wrought-iron drift bolts and spikes, 5½ cents per pound; removing and placing 350 cords stone in the pier, per cord, \$1.42; performing all labor necessary for removing old timber and iron of present superstructure, and framing, joint-
Jacob Muddaman, with Major O. E. Babcock, Corps of Engineers.	Mar. 19, 1872	ing, bolting, spiking, putting in snubbing-posts, and completing an entire new superstructure on 800 feet more, at \$8 per 1,000 feet, board-measure, for the timber used in construction, and to include the labor of driving the iron.
Barker & Williams, with Major O. M. Poe, Corps of Engineers.	Apr. 15, 1872	Contract expired under extension November 1, 1872.
Barker, Williams & Bangs, with Major O. M. Poe, Corps of Engineers.	Apr. 15, 1872	For furnishing materials and labor and completing the central gate-house of the Washington Aqueduct, at 50 cents per cubic yard for earth excavation; \$8.75 for concrete; stone-masonry, \$14.90; brick-masonry, \$15; stone-coping, \$37.50; furnishing and setting Phenix-beams, per pound, 10 cents; iron bolts and nuts, 16 cents; cast-iron grooves, 11 cents; hauling and setting 48 inch gate, stand, pipe, and spindle, \$150.
Augustus R. Wright, with Lieutenant-Colonel George Thom, Corps of Engineers.	Apr. 23, 1872	For furnishing the stone and labor necessary for the full and final completion of the coping of the parapets of Cabin John Bridge, Washington Aqueduct, and constructing and completing the same, at \$1.75 per cubic foot of coping.
Joseph Paquet, with Major Henry M. Robert, Corps of Engineers.	May 1, 1872	For continuing the improvement of the Saint Mary's Falls Canal, Michigan, being an extension of the contract of the same parties, dated February 9, 1871, to July 1, 1873, upon the same terms and provisions.
Hemenway & Garfield, with Captain G. L. Gillespie, Corps of Engineers.	May 16, 1872	For improvement of the Saint Mary's Falls Canal, Michigan, being an extension of the contracts of October 20, 1870, and February 9, 1871, to July 1, 1873, upon the same terms and conditions as are therein provided.
E. H. French, with Major John M. Wilson, Corps of Engineers.	May 23, 1872	For dredging a channel through Gravel Point Bar, in Royals River, Maine, at 49 cents per cubic yard, and at \$10 per hour for the removal of logs or snags. Contract expired September 15, 1872.
W. B. Downing & Brother, with Major O. E. Babcock, Corps of Engineers.	June 6, 1872	For constructing wing-dams on the Willamette River, above Oregon City, Oregon, at \$2.50 per linear foot. Contract expired October 31, 1872.
		For furnishing labor and materials for extending the east and west piers of Grand River Harbor, Ohio, into Lake Erie, at, for pine timber and plank, per 1,000 feet, board-measure, \$21.95; white-oak piles, (driven,) 50 cents per linear foot; wrought iron screw-bolts, per pound, 8 cents; drift-bolts, 5½ cents; spikes, 6½ cents; boiler-iron plate, per pound, 10 cents; hard rubble-stone, per cord, \$8.95; dredging, per cubic yard, 50 cents; framing under water, per linear foot, 10 cents; framing above water, per linear foot, 9½ cents; laying joists and plank, per 1,000 feet, board-measure. Contract expired November 8, 1872.
		For dredging in the harbor of Oak Orchard, New York, at 75 cents per cubic yard, for 8,500 cubic yards. Contract expired June 10, 1872.
		For building an office in Georgetown, D. C., for use of the Washington Aqueduct, as per specifications, \$4,822. Contract expired September 21, 1872.

H. E. Ex. 158	Alfred N. Coon, with Major O. E. Babcock, Corps of Engineers.	June 28, 1872	For furnishing labor and materials for full completion of the auxiliary gate-house, the wooden fence at the distributing-reservoir, the wooden fence at the high-service reservoir, and the ventilators over the conduit of the Washington Aqueduct, at, for wooden fence for reservoirs, per linear foot, 72 cents, and at auxiliary gate-house, for cut-stone masonry, per cubic foot, \$2.50; brick masonry, per cubic foot, 45 cents; all the doors, with fixtures and fastenings, \$1,000; cast iron, per pound, 9 cents; wrought iron, per pound, 18 cents; iron spindle, set complete, \$100; sky-light ventilator, \$100; excavation for ventilators over conduit, per cubic yard, 50 cents; cut-stone masonry for same, per cubic foot, \$3; brick masonry, per cubic foot, 60 cents; cast iron, per pound, 9 cents. Contract expired October 1, 1872.
	Edward P. Doherty, with Major O. E. Babcock Corps of Engineers.	June 29, 1872	For doing the excavation necessary for the distributing-reservoir of the Washington Aqueduct, including the furnishing of tools, at 33 cents per cubic yard. Contract expired September 1, 1872.
158	D. E. Bailey, with Major F. Harwood, Corps of Engineers.	July 5, 1872	For furnishing, for improvement of Buffalo Harbor, New York, white-oak piles, at 25 cents per linear foot; sawed timber and lumber, at \$19.98 per 1,000 feet, board-measure; wrought-iron screw and washer bolts, at 4½ cents per pound; drift-bolt iron, in bars, 3½ cents per pound; wrought-iron spikes, 5½ cents per pound; driving piles, each, \$5; framing, cutting, cutting iron for bolts, bolting, fastening, and securing, by stay-piles, the cribs or other wood work under water in place, per running foot, 12 cents; same for superstructure above low-water stage, 12 cents; fitting and fastening the scantling and boards, gaining, boring and bolting, or spiking the joists and fitting, boring and spiking the planks, \$7 per 1,000 feet, board-measure; furnishing and putting into the work all rubble-stone in the cribs or superstructure, or other places, per cord, \$6.85. Contract expires June 30, 1873.
	Shehan & Loler, with Major G. Weitzel, Corps of Engineers.	July 6, 1872	For furnishing materials and labor, and constructing the retaining-walls of the Louisville and Portland Canal, and grading slopes of canal-bank, at, for earth excavation above upper guard-gates, 65 cents per cubic yard, and 40 cents below the same; for masonry, \$11.10 per cubic yard; for removing old pavement, \$1 per cubic yard, and for masonry, \$10.25 per cubic yard. Contract expired January 1, 1873.
	B. Mallefert, with Major Q. A. Gillmore, Corps of Engineers.	July 15, 1872	For removing wreck of monitor Patapsco, in Charleston Harbor, to a depth of 25 feet at mean low water, for proceeds of wreck. Contract expired October 1, 1872.
	R. A. Shinn & Co., with Major O. E. Babcock, Corps of Engineers.	July 29, 1872	For furnishing materials and labor necessary for the completion of the parapets of stone bridges on the Washington Aqueduct, at, for hauling, cutting, and setting stone-coping, per cubic foot, 88 cents. Contract expired December 1, 1872.
	Emmart, Smith & Co., with Major O. E. Babcock, Corps of Engineers.	July 31, 1872	For furnishing machinery, tools, and labor, and excavating the distributing-reservoir of the Washington Aqueduct, at 33½ cents per cubic yard for earth excavation. Contract expired December 1, 1872.
	Emmart, Smith & Co., with Major O. E. Babcock, Corps of Engineers.	July 31, 1872	For furnishing labor and appliances and laying a 48-inch iron pipe in the distributing-reservoir of the Washington Aqueduct, at 35½ cents per cubic yard for earth excavation, and 75 cents for rock; brick-masonry, in cement, \$19 per cubic yard; cutting cast-iron 48-inch pipes, each, \$10; gasketing, leading, and making 48-inch joints, each, \$18.25; furnishing and setting ¼-inch air-cocks, each, \$8; furnishing and setting wrought-iron bolts and bands, per pound, 20 cents; hauling and distributing castings, per ton of 2,000 pounds, \$3.50. Expiration of contract indefinite; contingent.
	Illinois Central Railroad Company, by John Newell, president, with Major D. C. Houston, Corps of Engineers.	Aug. 7, 1872	For constructing extension of breakwater at Chicago, Illinois, at, for pine timber, per linear foot, 34 7-10 cents; hemlock timber, per linear foot, 30 6-10 cents; oak timber, per 1,000 feet, board-measure, \$18; pine plank, \$16; white-oak piles, per linear foot, 25 cents; iron drift-bolts, 5½ cents per pound; iron screw-bolts, 8 cents per pound; iron spikes, 8 cents; stone, per cord, \$6.50; brush and slabs, \$4 per cord; framing, including labor of construction, placing, sinking, and filling cribs with stone; of timber used, per linear foot, 12½ cents; laying planking, including spiking, per 1,000 feet, board-measure, \$3; driving piles, each, 3.50.
	Fox & Howard, with Major D. C. Houston, Corps of Engineers.	Aug. 9, 1872	For furnishing labor and materials and constructing a pile-pier in the harbor of Michigan City, Indiana, at 35 cents per linear foot for pine timber, and \$25 per 1,000 feet, board-measure, for pine plank; 25 cents per linear foot for Norway pine piles; 8 cents per pound for iron drift-bolts, and 12 cents per pound for iron screw-bolts; 8½ cents per pound for spikes; \$15 per cord for stone and \$8 for brush; framing, bolting, and finishing in place pine timber, per linear foot, 15 cents; laying planking, including spiking, per 1,000 feet, board-measure, \$10; driving piles, per linear foot, 15 cents. Contract expires September 1, 1873.

List of contracts made by the Engineer Department and received at the office of the Chief of Engineers during the year 1872, &c.—Continued.

Contractors.	Date.	Objects and terms of contracts.
Sidney Adams, with Major D. C. Houston, Corps of Engineers.	Aug. 10, 1872	For furnishing material and labor and constructing and putting in place 300 feet of breakwater at Marquette Harbor, Michigan, at 30 cents per linear foot of pine and hemlock timber, 12 inches by 18 inches; 20 cents per linear foot for 12 inches square pine timber; \$35 per 1,000 feet, board-measure, for oak-timber; \$18 per 1,000 feet, board-measure, for pine plank; 6½ cents per pound for iron drift-bolts; 10 cents for screw-bolts and 7 cents for spikes; \$9 per cord for stone and brush, and \$7 for slabs; framing, including labor of constructing, placing, sinking, and filling cribs with stone, 13 cents per linear foot; laying plank, including spiking, \$3 per 1,000 feet, board-measure; driving piles, each, \$3. Contract expires September 1, 1873.
Joseph Rankin, with Major D. C. Houston, Corps of Engineers.	Aug. 10, 1872	For constructing and putting in place in the harbor of Two Rivers, Wisconsin, 500 feet of pile-pier at 16 cents per linear foot for 12-inches square pine timber; \$22 per 1,000 feet, board-measure, for oak timber; \$13 per 1,000 feet, board-measure, for pine plank; 12 cents per linear foot for rock elm piles; 6 cents per pound for iron drift-bolts; 9 cents for screw-bolts, and 6 cents for spikes; \$8 per cord for stone and \$2 for slabs; framing, including bolting and finishing in place pine timber, 16 cents per linear foot, and 30 cents for oak; laying plank, including spiking per 1,000 feet, board-measure, \$2; driving piles, per linear foot driven, 22 cents. Contract expires August 1, 1873.
Thomas Windiate, with Major D. C. Houston, Corps of Engineers.	Aug. 10, 1872	For constructing 100 feet, more or less, of pier-work in Cheboygan Harbor, Michigan, and dredging and removing 5,000 cubic yards, at 30 cents per linear foot for pine timber and 20 cents for hemlock; for oak timber and \$15 for pine plank; 20 cents for spikes; \$8 per cord for stone and \$3 for brush and slabs; framing, placing, and sinking and filling for 12-inches square pine and 20 cents for hemlock; \$24 per 1,000 feet, board-measure, for oak timber and \$15 for pine plank; 20 cents for spikes; \$8 per cord for stone and \$3 for brush and slabs; framing, placing, and sinking and filling cribs with stone, 15 cents per linear foot; laying plank, including spiking, \$2 per 1,000 feet; driving piles, each, \$3; dredging per cubic yard, 30 cents. Contract expires August 1, 1873.
Abner Kirby, with Major D. C. Houston, Corps of Engineers.	Aug. 10, 1872	For constructing and putting in place in Menomonee Harbor, Wisconsin and Michigan, 500 feet of pile-pier and 700 feet of slab-pier, at 17 cents per linear foot for 12-inches square pine timber; \$45 per 1,000 feet, board-measure, for oak timber; \$12.50 per 1,000 feet, board-measure, pine plank; 9 cents for Norway pine piles; 6 cents per pound for iron drift-bolts, 8½ cents for screw-bolts, and 7 cents for spikes; \$9 per cord for stone and \$2.50 for slabs; framing, bolting, and finishing in place pine timber, 17 cents per linear foot, and 40 cents for oak; laying plank and piling, per 1,000 feet, board-measure, \$8; driving piles, per linear foot 28 cents. Contract expires August 1, 1873.
Le May & Grant, with Major D. C. Houston, Corps of Engineers.	Aug. 10, 1872	For furnishing materials, labor, and appliances, and constructing and putting in place 750 feet of pier-work in Superior City Harbor, Wisconsin, at 36 cents per linear foot for 12-inch pine and hemlock timber; 14 cents per linear foot for 12-inches square pine and hemlock timber; \$40 per 1,000 feet for oak timber and \$14 for pine plank; 20 cents for 12-inches square pine and hemlock piles; 8 cents per pound for iron drift-bolts, 10 cents for screw-bolts, and 8½ cents for linear foot for white-oak piles; \$5.50 for brush and \$5 for slabs; framing, placing, filling cribs with stone, and spikes; \$7.50 per cord for stone; \$5.50 for brush and \$5 for slabs; framing, placing, filling cribs with stone, and sinking, per linear foot, 10 cents; laying and spiking planks, per 1,000 feet, board-measure, \$5; driving piles, each, \$2. Contract expired December 1, 1872.
F. M. Knapp, with Major D. C. Houston, Corps of Engineers.	Aug. 10, 1872	For constructing 50 feet of pier-work in the harbor of Kenosha, Wisconsin, at 32 cents per linear foot of pine and hemlock timber; 30 cents per 1,000 feet of oak timber; \$16 per 1,000 feet, board-measure, for pine plank; 25 cents per linear foot for white-oak piles; 6 cents per pound for iron drift-bolts, and 8 cents for screw-bolts and spikes; \$15 per cord for stone and \$5.50 per cord for brush and slabs; framing, placing, sinking, and filling cribs with stone, per linear foot for stone and \$5.50 per cord for brush and slabs; framing, placing, sinking, and filling cribs with stone, each, 18 cents; laying and spiking plank, \$2 per 1,000 feet, board-measure; driving piles, each, \$6. Contract expires December 1, 1872.
Thomas Windiate, with Major D. C. Houston, Corps of Engineers.	Aug. 12, 1872	For constructing 200 feet of pile-pier and dredging 35,000 cubic yards in the harbor of Ahnapee, Wisconsin, at 18 cents per linear foot for pine timber; \$24 per 1,000 feet, board-measure, for oak timber and \$15 for pine plank; 14 cents per linear foot for rock elm piles; 6 cents per pound for iron drift-bolts and spikes, and 9 cents for screw-bolts; \$6 per cord for stone and \$2.50 for slabs; framing, bolting, and finishing in place pine timber, 16 cents per linear foot and 30 cents for oak; laying and spiking plank per 1,000 feet, board-measure, \$2; driving piles, 25 cents per linear foot driven. Contract expires August 1, 1873.

S. F. Shelburne, with Major G. K. Warren, Corps of Engineers.	Aug. 12, 1872	For dredging in Bridgeport Harbor, Connecticut, at 21½ cents per cubic yard. Contract expires June 30, 1873.
Sydney F. Shelburne, with Major G. K. Warren, Corps of Engineers.	Aug. 12, 1872	For dredging in Huntington Harbor, New York, at 30 cents per cubic yard at the entrance, and at 14.95 cents per cubic yard inside the harbor. Contract expires June 30, 1873.
Morris & Cummings, with Major W. P. Craighill, Corps of Engineers.	Aug. 16, 1872	For furnishing machinery and appliances and dredging in Northeast River, Maryland, at 20 cents per cubic yard. Contract expired November 30, 1872.
Morris & Cummings, with Major W. P. Craighill, Corps of Engineers.	Aug. 16, 1872	For furnishing machinery and appliances and dredging a channel in Worton Creek, Maryland. Contract expires June 1, 1873.
John G. Sheffield, with Major G. K. Warren, Corps of Engineers.	Aug. 14, 1872	For delivering at Block Island, Rhode Island, about 10,000 tons blasted or quarried rock, (granite blocks,) at \$2.19 per ton. Contract expires June 30, 1873.
Staples & Phillips, with Major G. K. Warren, Corps of Engineers.	Aug. 15, 1872	For excavating a channel-way in the Taunton River, Massachusetts, at Burt's Rock and Pond Creek Shoals, and other places between Dighton and Weir Village, at \$3.45 per cubic yard. Contract expires June 30, 1873.
James S. Routh, with Major Wm. E. Merrill, Corps of Engineers.	Aug. 16, 1872	For constructing a dike in the Ohio River, near Evansville, at \$1.70 per cubic yard for stone; \$1.20 per cord for brush used; and \$10 each for piles. Contract expires December 1, 1873.
James S. Routh, with Major W. E. Merrill, Corps of Engineers.	Aug. 16, 1872	For furnishing and putting in place 1,500 cubic yards of stone for the repair of the dike at Glass House Ripple, in the Ohio River, at \$1.60 per cubic yard. Contract expired December 1, 1872.
Coll. P. McDougall, with Major D. C. Houston, Corps of Engineers.	Aug. 16, 1872	For constructing and putting in place in the harbor of Du Luth, Minnesota, 300 feet of breakwater, at 21 cents per linear foot for 12-inch pine and hemlock timber; 16 cents per linear foot for 12-inch pine and hemlock timber; \$16 per 1,000 feet, board-measure, for oak timber, and \$12 for pine plank; 9 cents per linear foot for white-oak plank; 6½ cents per pound for iron drift-bolts, and 7 cents for screw-bolts and spikes; \$6.29 per cord for stone, and \$3 for brush and slabs; framing, placing, sinking, and filling cribs with stone, 8 cents per linear foot; laying and spiking plank per 1,000 feet, board-measure, \$2; driving piles, each, \$1. Contract expires September 1, 1873.
Cornelius Daly, with Major John M. Wilson, Corps of Engineers.	Aug. 19, 1872	For dredging in the channel of the Saint Lawrence River, to a depth of 12 feet at lowest water, at \$1.25 and 37½ cents per cubic yard, according to locality. Contract expires July 1, 1873.
Henry J. Mowry, with Major John M. Wilson, Corps of Engineers.	Aug. 19, 1872	For furnishing materials and labor, preparing bottom, and building up upon the old cribs in Big Sodus Harbor, New York, 360 feet, more or less, of the east breakwater, at \$21 per 1,000 feet, board-measure, for hemlock timber and plank; 6 cents per pound for iron drift-bolts; 7 cents per pound for spikes; \$8 per cord for rubble-stone; \$9 per 1,000 feet, board-measure for labor on timber, and 2 cents per pound for labor on iron. Contract expires July 1, 1873.
A. R. Wright, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 20, 1872	For dredging a channel through the bar at the head of Swan Island Bar, Kennebec River, Maine, to a depth of 10 feet at mean low water, at 50 cents per cubic yard, or \$100 per day of eight hours. Contract expired October 1, 1872.
Andrew A. Bonker, with Major G. K. Warren, Corps of Engineers.	Aug. 20, 1872	For constructing at Drew's Rock, Housatonic River, Connecticut, an embankment of blasted or quarried stone, at \$1.70 per cubic yard. Contract expires June 30, 1873.
G. H. Ferris, with Major G. K. Warren, Corps of Engineers.	Aug. 21, 1872	For dredging in the Norwalk River, Connecticut, opposite Jennings' Wharf, and above and below the same, at 24½ cents per cubic yard. Contract expires June 30, 1873.
George H. Ferris, with Major W. P. Craighill, Corps of Engineers.	Aug. 21, 1872	For dredging in the Craighill Channel, Baltimore Harbor, (Patapsco River,) at 29 cents per cubic yard. Contract expires November 15, 1873.
George H. Ferris, with Major W. P. Craighill, Corps of Engineers.	Aug. 21, 1872	For dredging in the harbor of Cambridge, Maryland, at 18½ cents per cubic yard. Contract expires April 15, 1873.
Bird & Mickle, with Captain S. M. Mansfield, Corps of Engineers.	Aug. 21, 1872	For constructing, filling with stone, and putting in place an extension of 65 feet of crib-work to the south pier in the harbor of Frankfort, Michigan, furnishing all the material except 32-inch drift-bolts, and all the labor, machinery, and appliances, at 26 cents per cubic foot hemlock timber and 30 cents for pine; \$14 per cord for stone; 6½ cents per pound for iron drift-bolts, and \$2 per cord for slabs. Contract expires June 1, 1873.
Bird & Mickle, with Captain S. M. Mansfield, Corps of Engineers.	Aug. 21, 1872	For furnishing all the materials except such iron and pine timber as may be delivered to him, all labor, machinery, and appliances, and making such repairs and constructing such pile pier as is required in the harbor of Muskegon, Michigan, at 18 cents per cubic foot; 14 cents per cubic foot for framing, bolting, and putting in place pine timber; furnishing oak timber 10 inches by 12 inches, 36 cents per linear foot, and 26 cents for 4 inches by 8 inches; 8 cents for Norway pine-piles per linear foot; 7 cents per pound for wrought-iron drift-bolts; screw bolts and washers, 7½ cents; \$14 per cord for stone; 21 cents per linear foot for driving piles; 30 cents per cord for either removing slabs from old piers, or for removing slabs from old slab-piers into new work. Contract expires August 1, 1873.

List of contracts made by the Engineer Department and received at the office of the Chief of Engineers during the year 1872, &c.—Continued.

Contractors.	Date.	Objects and terms of contracts.
Bird & Mickle, with Captain S. M. Mansfield, Corps of Engineers	Aug. 21, 1872	For delivering such Norway pine piles as are required, and furnishing all materials and labor, machinery, &c., and constructing a pile revetment, except the work of driving the piles, in the harbor of Manistee, Michigan, at 32 cents per cubic yard for 12 inches by 12 inches pine timber per linear foot; 36 cents for 10 inches by 12 inches oak and 26 cents for 4 inches by 8 inches oak; 7 cents per pound for iron drift-bolts and 7½ cents for screw-bolts and washers; \$12.50 per cord for stone and \$2 per cord for slabs. Contract expires July 1, 1873.
D. V. Howell, with Major G. K. Warren, Corps of Engineers.	Aug. 21, 1872	For delivering about 8,000 tons of granite riprap stone in the jetty at Bridgeport Harbor, Connecticut, at \$2.37 per ton. Contract expires June 30, 1873.
M. F. Brainard, for Albany Dredging Company, with Major W. P. Craighill, Corps of Engineers.	Aug. 22, 1872	For dredging in the south channel of the Appomattox River, Virginia, near the city of Petersburg, at 16.45 cubic yard. Contract expires February 15, 1873.
Soule & Brown, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 22, 1872	For delivering 5,000 tons, more or less, of rough shore stone, or black stone, for foundation of breakwater extension in Portland Harbor, Maine, at \$1.20 per ton. Contract expired November 1, 1872.
M. F. Brainard, for Albany Dredging Company, with Major W. P. Craighill, Corps of Engineers.	Aug. 22, 1872	For dredging in Queenstown Harbor, Maryland, at 19½ cents per cubic yard. Contract expired November, 1 1872.
M. F. Brainard, with Major G. K. Warren, Corps of Engineers.	Aug. 22, 1872	For dredging in Wareham Harbor, Massachusetts, at 34½ cents per cubic yard, measured in the scows. Contract expires June 30, 1873.
Edgar M. Payn, with Major G. K. Warren, Corps of Engineers.	Aug. 22, 1872	For dredging in the Pawtucket River, Rhode Island, below the city of Pawtucket, at 32½ cents per cubic yard. Contract expires June 30, 1873.
Edgar M. Payn, with Major G. K. Warren, Corps of Engineers.	Aug. 22, 1872	For dredging in the Pawcatuck River, Rhode Island and Connecticut, from Cemetery Point up the river toward Westerly, at 36½ cents per cubic yard. Contract expires June 30, 1872.
E. R. Seward, with Major G. K. Warren, Corps of Engineers.	Aug. 22, 1872	For dredging in the Thames River, Connecticut, below Norwich, at 19 cents per cubic yard. Contract expires June 30, 1873.
S. F. Shortland & Brother, with Major G. K. Warren, Corps of Engineers.	Aug. 22, 1872	For excavating in New Haven Harbor, Connecticut, so as to make a cut across the sand-bar opposite Fort Hale, increasing the depth from 13 to 15 feet at mean low water, at 19.73 cents per cubic yard. Contract expires June 30, 1873.
M. F. Brainard, with Major G. K. Warren, Corps of Engineers.	Aug. 22, 1872	For excavating in the Connecticut River, Connecticut, at Pratt's Ferry Bar, and at such other points as may be agreed upon, at 25 cents per cubic yard. Contract expires June 30, 1873.
M. F. Brainard, with Major G. K. Warren, Corps of Engineers.	Aug. 22, 1872	For excavating in the Peconic River, Long Island, New York, at 24 cents per cubic yard, measured in the scows. Contract expires June 30, 1873.
Edward Moore, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 22, 1872	For furnishing for the breakwater at Richmond's Island, Maine, 15,000 tons of large and small stone, at \$1.24 per ton. Contract expires January 13, 1873.
Samuel Dyer, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 23, 1872	For removing rocks in Welfleet Harbor, Maine, at \$250 for Channel Rock, \$750 for Lobster Rock, \$400 for Lump-fish Rock, \$450 for Mayo's Rock, and \$550 for Bay Rock. Contract expires June 30, 1873.
Lord & Wright, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 23, 1872	For building the outer pier and capping required for the completion of the breakwater in Portland Harbor, Maine, at \$9,750 for the outer pier and \$22.50 per linear foot for the granite capping. Contract expires June 30, 1873.
Albert A. Dodge, with Major W. P. Craighill, Corps of Engineers.	Aug. 23, 1872	For furnishing machinery and appliances and dredging in the Rappahannock River, Virginia, at 33 cents per cubic yard. Contract expired January 1, 1873.
James Andrews, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 23, 1872	For building 275 linear feet of sea-wall on Long Island Head, Boston Harbor, including excavation, back filling, and paving, at \$58.19 per running foot for granite wall, including facing and coping, concrete, foundation, and backing; \$10.25 per cubic yard for concrete for additional foundation; \$1 per cubic yard for excavation; 50 cents per cubic yard for back filling and \$5 per superficial yard for paving. Contract expired November 30, 1872.
H. J. Mowry, with Major John M. Wilson, Corps of Engineers.	Aug. 23, 1872	For constructing 190 feet of pier at Little Sodus Harbor, New York, at \$24 per 1,000 feet, board-measure, for hemlock timber and plank; \$32 for Norway white pine and plank; 50 cents per linear foot for white-oak snubbing-posts; 8 cents per pound for iron screw and washer bolts, 6 cents for drift-bolts, and 7 cents for spikes; \$8 per cord for rubble-stone; \$1 per cubic yard for dredging; \$7 per 1,000 feet, board-measure, for labor on timber, and 1 cent per pound for labor on iron. Contract expires July 1, 1873.

H. J. Mowry, with Major John M. Wilson, Corps of Engineers.	Aug. 23, 1872	For constructing 210 feet of pier at Olcott, New York, at \$23 per 1,000 feet, board-measure, for hemlock timber and plank; \$28 for Norway or Canada white-pine timber; 50 cents per linear foot for white-oak snubbing-posts; 8 cents per pound for wrought washers and spikes; \$8 per cord for rubble-stone; \$7 per 1,000 feet for labor on timber and 2 cents per pound on iron, and 10 cents each for trenails driven. Contract expires July 1, 1873.
J. H. Teemyer & Co., with Major W. P. Craighill, Corps of Engineers.	Aug. 4, 1872	For dredging in the Wilcomico River, 14,000 cubic yards, at 28 cents per cubic yard. Contract expired November 1, 1872.
James M. Andrews, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 24, 1872	For building a sea-wall of 225 feet on Point Allerton, Boston Harbor, in extension of that already done, at \$77.90 per running foot of granite wall; \$11 per cubic yard of concrete; \$1 per cubic yard of excavation; 50 cents per cubic yard of back filling and \$6.40 per superficial yard of paving. Contract expired November 30, 1872.
Miller & Bedard, with Major W. E. Merrill, Corps of Engineers.	Aug. 26, 1872	For furnishing necessary material and repairing dam at head of Cumberland Island, in the Ohio River, at \$1.23 per cubic yard for stone used. Contract expired December 1, 1872.
Miller & Bedard, with Major W. E. Merrill, Corps of Engineers.	Aug. 26, 1872	For removing that portion of Bacon Rock which is within 7 feet of the surface of the water when it stands at zero by gauge at Cairo, Illinois, for \$4,843. Contract expires February 1, 1873, (conditional.)
George W. Townsend, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 26, 1872	For blasting and removing to a depth of 7 feet below mean low water in Penobscot River, Maine, Independence Rock, at \$7,440; Steamboat Ledge, at \$6,000; and ledge off Dole's planing-mill, at \$7,760. Contract expires August 30, 1873.
George W. Townsend, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 26, 1872	For removing rocks in Gloucester Harbor, Massachusetts, at \$450 for Glam Rock; \$1,170 for Pinnacle Rocks; \$330 for rock off J. Friend's wharf; \$45 for rocks off Pew's wharf; and \$20 per cubic yard for Babson's Ledge. Contract expired December 20, 1872.
George W. Townsend, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 26, 1872	For doing the following work at Sullivan's River and Sullivan's Falls, Maine, viz: Removing two bridge piers, each, \$3,000; blasting out Hatcher's Rock to such depth as may be necessary below mean low water, for \$4,145 to a depth of 7 feet; \$10,850 to a depth of 8½ feet; and \$13,300 to a depth of 9 feet; and \$840 for blasting out ledge near Hatcher's Rock to a depth of 7 feet, being 24 cubic yards. Contract expires June 10, 1873.
John Beattie, with Major G. K. Warren, Corps of Engineers.	Aug. 26, 1872	For delivering at Port Jefferson Harbor, New York, about 5,000 tons of blasted or quarried granite blocks, and depositing the same in the jetty, at \$2.67 per ton. Contract expires May 10, 1873.
Roderick Mackenzie, with Major G. Weitzel, Corps of Engineers.	Aug. 27, 1872	For doing work for the improvement of the Wabash River, Indiana, at \$64.25 per day for snagging; \$64.75 per day for dredging; \$2.45 per cubic yard for excavating at Coffee Island Chute; and \$1.50 per cubic yard for wing-dam at Coffee Island Chute. Contract expires within one year.
C. M. Cole, with Major Wm. E. Merrill, Corps of Engineers.	Aug. 28, 1872	For repairing dam on the right of Wheeling Island, Ohio River, and furnishing and putting in place the 2,500 cubic yards of stone, more or less, at \$1.24 per cubic yard. Contract expired December 1, 1872; extended to June 30, 1873.
M. Cole, with Major Wm. E. Merrill, Corps of Engineers.	Aug. 28, 1872	For repairing dam and dike at Buffington Island, Ohio River, and furnishing and putting in place 15,000 cubic yards of stone, at 84 cents per cubic yard. Contract expires December 1, 1873.
Charles Cable, with Major Wm. E. Merrill, Corps of Engineers.	Aug. 28, 1872	For repairing dam at Chartier's Creek, Ohio River, boating and placing in the dam the stone already quarried, and delivering on the bank at Baker's Yard, 75 cents per cubic yard; and furnishing and placing in the dam the additional stone required, \$1.70 per cubic yard. Contract expires December 1, 1872.
E. H. French, with Major John M. Wilson, Corps of Engineers.	Aug. 28, 1872	For constructing 180 feet of pier at Pultneyville, New York, at \$35 per 1,000 feet, board-measure, for Canada or Norway white-pine timber or plank; \$25 for hemlock plank; 50 cents for white-oak snubbing-posts; 10 cents per pound for screw and washer bolts; 7 cents for drift-bolts, and 10 cents for wrought spike; furnishing labor, machinery, tools, &c., \$10 per 1,000 feet, and 2 cents per pound for iron driven. Contract expires September 2, 1872.
E. H. French, with Major John M. Wilson, Corps of Engineers.	Aug. 28, 1872	For dredging in the channel between the piers in the harbor of Big Sodus, New York, at 35 cents per cubic yard. Contract expires July 1, 1873.
Henry J. Mowry, with Major John M. Wilson, Corps of Engineers.	Aug. 30, 1872	For constructing 600 feet of new breakwater at Oswego, New York, at \$28 per 1,000 feet, board-measure, for Canada or Norway white-pine timber; \$21 for hemlock timber; 50 cents per linear foot for snubbing-posts; 8 cents per pound for iron screw and washer bolts; 6 cents for drift-bolts, and 7 cents for wrought spike; \$10 per 100 for tree-nails; \$7 per cord for rubble-stone; \$8 per 1,000 feet for labor, tools, machinery, &c., for construction of break-water of timber used, and 2 cents per pound for iron driven. Contract expires September 2, 1873.
George W. Townsend, with Lieutenant-Colonel George Thom, Corps of Engineers.	Aug. 31, 1872	For removing from the channel at the upper middle bar in Boston Harbor, all bowlders which the engineer in charge may require to have removed, at \$25 per cubic yard, and all ledge that the engineer may require from the upper middle bar, at \$30 per cubic yard. Contract expires May 31, 1873.
Wm. Richardson, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For removing from the main ship-channel of Maumee Bay, Ohio, 40,000 cubic yards of sand and clay, at 29 cents per cubic yard. Contract expires July 1, 1873.

List of contracts made by the Engineer Department and received at the (file) of the Chief of Engineers during the year 1872, &c.—Continued.

Contractors.	Date.	Objects and terms of contracts.
Wm. Richardson, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For furnishing and driving piles and dredging in Monroe Harbor, Michigan, at 40 cents per linear foot, sawed-timber piling; 7 cents per pound for screw-bolts; 9 cents for spike; 35 cents per linear foot for white-oak piles and driving, and 28 cents per linear foot for dredging. Contract expires July 1, 1873.
D. E. Bailey, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For furnishing material and labor for the extension of the east and west piers of Black River Harbor, at \$21 per 1,000 feet, board-measure, for pine and hemlock timber; 7 cents per pound for iron screw-bolts; 5½ cents for drift-bolts, and 6¼ cents for spike; \$8 per cord for rubble-stone, and 35 cents per cubic yard for dredging; 10 cents per linear foot for framing above and below water; and \$8 per 1,000 feet, board-measure, for laying joists and decking. Contract expires July 1, 1873.
Wm. Richardson, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For dredging in Sandusky Bay, leading to Sandusky City, at 24 cents per cubic yard. Contract expires July 1, 1873.
Stock & Rooney, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For dredging in Maumee River, between Maumee City and Toledo, Ohio, at 25 cents per cubic yard. Contract expires July 1, 1873.
O. J. Jennings, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For dredging in the Sandusky River, between Fremont, Ohio, and Sandusky Bay, at 25 cents per cubic yard. Contract expires July 1, 1873.
Hemenway & Garfield, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For furnishing material and labor and constructing a pier in Rocky River Harbor, Ohio, at \$25 per 1,000 feet, board-measure, for pine and hemlock timber; 50 cents per linear foot for piling; 8 cents per pound for screw-bolts; 6 cents for drift-bolts; 9 cents for spikes; \$8 per cord for rubble-stone; 40 cents per cubic yard for dredging for foundation and other dredging; framing below water, 11 cents per linear foot, and 10 cents above water; \$7 per 1,000 feet, board-measure, for joists and decking. Contract expires December 1, 1872.
Lee & Dunbar, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For drilling, blasting, and dredging in the harbor of Ashtabula, Ohio, at \$2.75 per cubic yard for solid rock, 50 cents for loose rock, and 35 cents for dredging sand. Contract expires July 1, 1873.
Lee & Dunbar, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For dredging in the harbor of Erie, Pennsylvania, at 29½ cents per cubic yard. Contract expires July 1, 1873.
Stock & Rooney, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For dredging in Port Clinton Harbor, Ohio, at 35 cents per cubic yard for sand, clay, or gravel. Contract expires July 1, 1873.
O. J. Jennings, with Captain G. L. Gillespie, Corps of Engineers.	Aug. 31, 1872	For drilling, blasting, and dredging in the harbor of Vermillion, Ohio, at \$2.75 per cubic yard for shale rock, \$3 for solid rock, and \$1 for loose rock. Contract expires July 1, 1873.
Dodge & Squier, with Captain S. M. Mansfield, Corps of Engineers.	Sept. 2, 1872	For furnishing all materials except drift-bolts, the labor, machinery, and appliances, and constructing revetment, making repairs, removing sand, earth, and old slab piers, at the harbor of Pere Marquette, Michigan, as may be required, at 28 cents for furnishing, bolting, placing, framing, and putting in place pine timber; 40 cents per linear foot for oak timber; 8 cents per pound for wrought-iron screw-bolts and washers; 6 cents per linear foot for Norway pine piles, and 14 cents for oak; \$12 per cord for stone; \$2 per cord for slabs; 20 cents per linear foot for driving piles; 20 cents per cubic yard for removing slabs above water; 50 cents per cubic yard for dredging below water, and 28 cents for dredging sand or other earth. Contract expires August 1, 1873.
T. Stewart White, with Captain S. M. Mansfield, Corps of Engineers.	Sept. 2, 1872	For constructing and putting in place at the harbor of Grand Haven, Michigan, such revetment and repairs as may be required, at 27 cents per linear foot for pine timber; 40 cents and 26 cents, respectively, for oak; 12 cents per linear foot for white-oak piles; 6 cents per pound for drift-bolts; \$8 per strap for wrought-iron straps; \$12 per cord for stone; \$1.90 for slabs, and 19 cents per foot for driving piles. Contract expires July 1, 1873.
T. Stewart White, with Captain S. M. Mansfield, Corps of Engineers.	Sept. 2, 1872	For constructing revetment, making such repairs, and removing sand, earth, or old slab piers, as may be necessary, at the harbor of Pentwater, Michigan, at 27 cents per cubic foot for pine timber; 40 cents and 25 cents respectively for oak timber; 6 cents per pound for iron drift-bolts; 8 cents for screw-bolts and washers; 6 cents per linear foot for Norway pine piles and 12 cents for oak; \$1.50 per cord for stone; \$1.45 for slabs; 18 cents per linear foot for driving piles; 20 cents per cubic yard for removing slabs above water; 30 cents per cubic yard for dredging below water, and 24½ cents per cubic yard for dredging sand or other earth. Contract expires September 1, 1873.
Carken and Stickney, with Major O. M. Poe, Corps of Engineers.	Sept. 2, 1872	For dredging in the harbor of Cheboygan, Michigan, at 22½ cents per cubic yard. Contract expires June 15, 1873.

John Roost, with Captain S. M. Mansfield, Corps of Engineers.	Sept. 2, 1872	For constructing and putting in place in the harbor of Saugatuck, Michigan, a pile pier, at 30 cents per linear foot for pine timber; 32 cents and 28 cents for oak, according to size; 15 cents per linear foot for white-oak piles; 6½ cents per pound for drift-bolts and washers, and 7½ cents for screw-bolts and washers; \$11 per cord for stone, and \$1.50 for handling slabs; 30 cents per foot for driving piles. Contract expires September 1, 1873.
John Roost, with Captain S. M. Mansfield, Corps of Engineers.	Sept. 2, 1872	For constructing and putting in place at the harbor of Black Lake, Michigan, such pile revetment as may be required, at 25 cents per linear foot for pine timber; 28 cents and 32 cents for oak; 14 cents per linear foot for white-oak piles, and 20 cents for driving same; 6 4-5 cents per pound for drift-bolts; 7 4-5 cents for screw-bolts and washers; \$10.50 per cord for stone; \$3 for slabs. Contract expires January 1, 1873.
O. J. Jennings, with Major F. Harwood, Corps of Engineers.	Sept. 2, 1872	For constructing a section of breakwater at Dunkirk, New York, at \$19 per 1,000 feet, board-measure, for hemlock timber; \$25 for hard-pine timber and lumber; \$40 for white-oak timber; 5.2 cents per pound for iron drift-bolts; 8 cents for nut, screw, and washer bolts; 5½ cents for wrought-iron bevel bolts; 6½ cents for wrought-iron spikes; 14 cents per linear foot for framing, placing, boring for bolting, bolting and securing in place the work under water of all crib-work, and the same for superstructure; \$10 per cord for stone; \$12 per 1,000 feet, board-measure, for fitting, gaining, and fastening all joists, scantling, planks, and boards. Contract expires June 30, 1873.
James Caldwell, with Captain S. M. Mansfield, Corps of Engineers.	Sept. 3, 1872	For constructing and sinking cribs in the harbor of South Haven, Michigan, at 29 cents per cubic foot for hemlock timber; 32 cents for pine and 40 cents for oak; 7 cents per pound for drift-bolts; 9 cents for screw-bolts; \$12 per cord for stone and \$4 for slabs. Contract expires June 1, 1873.
Thomas M. Hubbell, with Major O. M. Poe, Corps of Engineers.	Sept. 4, 1872	For dredging at the mouth of Black River, in Saint Clair River, Michigan, at 28 cents per cubic yard. Contract expires September 1, 1873.
George W. Townsend, with Major G. K. Warren, Corps of Engineers.	Sept. 4, 1872	For removing from Saybrook Bar, at the mouth of the Connecticut River, all the wreck of the schooner Bay State, for \$800. Contract expires June 30, 1873.
C. T. Yoder, with Major O. E. Babcock, Corps of Engineers.	Sept. 4, 1872	For furnishing the office of Public Buildings, Grounds, and Works with fuel as required, at \$8 per ton for white-ash furnace-coal; \$9.50 per ton for Lykens Valley coal; \$9 for range coal; \$12.50 per cord for pine wood, sawed in eight pieces and split; \$12 per cord for oak sawed in three pieces; and \$9 per cord for bakers' pine wood in sticks. Contract expires as required.
Wells, Timberman & Co., with Colonel J. N. Maccomb, Corps of Engineers.	Sept. 4, 1872	For delivering face, backing, rubble, and slope-wall stone, for the completion of the lower lock and construction of the middle lock of the Des Moines Rapids Canal, at, for the lower lock, \$16 per cubic yard for face-stone; \$7 for backing-stone; \$7 for rubble-stone for vertical or battered wall, and \$5 for rubble-stone for slope-stone; and for the middle lock \$15.50 per cubic yard for face-stone, and \$5 for all backing and rubble-stone. Contract expired December 31, 1872.
F. D. Van Wagenen, with Colonel J. N. Maccomb, Corps of Engineers.	Sept. 4, 1872	For furnishing materials and performing the labor necessary for the completion of the prism and embankment walls of the canal for the improvement of the Des Moines Rapids of the Mississippi River, at \$1,000 for grubbing and clearing; \$4,000 for bailing and draining; 50 cents per cubic yard for earth excavation; \$3.50 per cubic yard for excavating and removing rock; 30 cents per cubic yard for earth borrowed used in embankment; 10 cents per cubic yard for labor of puddling; 50 cents per cubic yard for loose stone borrowed; \$1.25 per cubic yard for labor of laying stone in face of riprap walls; 50 cents per cubic yard for vertical wall laid dry; \$1 per cubic yard for concrete masonry; \$1 per rod for constructing public road, including necessary bridges and abutments, except the bridge at Lamalees Creek. Expiration of contract conditional.
A. R. Wright, with Lieutenant Colonel George Thom, Corps of Engineers.	Sept. 9, 1872	For doing the dredge and ledge excavation in Merrimac River, Massachusetts, at Hazeltine Rapids, and at the Lower Falls, Massachusetts, at \$4.95 per cubic yard for dredge excavation, and \$35 per cubic yard for ledge excavation. Contract expires June 30, 1873.
John Screven, mayor, on behalf of the city of Savannah, Georgia, with Major Q. A. Gillmore, Corps of Engineers.	Sept. 10, 1872	For dredging in the Savannah River, Georgia, at 35 and 75 cents per cubic yard, according to locality. Contract expires August 1, 1873.
Dull & Williams, with Colonel J. N. Maccomb, Corps of Engineers.	Sept. 10, 1872	For furnishing all materials, except stone, cement, iron, and lumber, and performing all the labor necessary, and constructing and finishing the lower lock of the Des Moines Rapids Canal, Mississippi River, at \$5,000 for bailing and draining; 50 cents per cubic yard for earth excavation; \$2 for rock excavation; 75 cents per cubic yard for embankment; 50 cents per cubic yard for lining, and same for labor of puddling; \$1 per cubic yard for loose stone borrowed, and \$10 for cut-stone masonry; 5 cents per pound for handling and putting in the work cast and wrought iron; \$500 per lock for sulphur and sand for securing iron-work; \$1.50 per cubic yard for constructing slope wall; \$4 per cubic yard concrete masonry, and \$4 per cubic yard for constructing vertical or battered wall laid in cement. Contract expires contingently.

Contractors.	Date.	Objects and terms of contracts.
Willard Johnson, with Colonel J. N. Macomb, Corps of Engineers.	Sept. 12, 1872	For furnishing all materials, except stone, cement, iron, and lumber, and performing all the labor necessary to construct and finish the middle lock of the Des Moines Rapids Canal, Mississippi River, including all the work necessary to complete the prism of the canal and its banks and walls for 200 feet below the lock walls, and its connections, at \$3,000 for bailing and draining; 40 cents per cubic yard earth, and \$2 for rock excavation; 15 cents for embankment; 40 cents for lining and 5 cents for puddling; 25 cents for loose stone borrowed; \$8 for cut-stone masonry; 1 cent per pound for handling and putting in the work all cast, and 10 cents for cast iron; \$50 per lock for sulphur and sand; 3 cents per pound for lead and antimony; \$1 per cubic yard for constructing slope wall, and \$3 for battered wall; and \$1 per cubic yard for concrete masonry. Expiration of contract conditional. Contract expired January 1, 1873.
American Dredging Company, by F. A. Cotten, treasurer, with Lieutenant-Colonel J. D. Kurtz, Corps of Engineers.	Sept. 13, 1872	For dredging in the Christiana River, Delaware, at 25, 32, and 37 cents per cubic yard, according to locality. Contract expired January 1, 1873.
Do.....	Sept. 13, 1872	For removing 35 cubic yards of rock in the Christiana River, at \$50 per cubic yard. Contract expired January 1, 1873.
Do.....	Sept. 13, 1872	For removing 730 cubic yards of rock in the Schuylkill River, at \$17 per cubic yard. Contract expires April 30, 1873.
J. H. Teemyer, with Major W. P. Craighill, Corps of Engineers.	Sept. 14, 1872	For dredging in Accotink Creek, Virginia, at 18 cents per cubic yard, deposited on the bank, or 35 cents per cubic yard removed to a distance of one mile on scows. Contract expired December 31, 1872.
Wm. H. Beard, with Lieutenant-Colonel J. D. Kurtz, Corps of Engineers.	Sept. 16, 1872	For excavating a channel in the Schuylkill River, between its mouth and Chestnut-street bridge, Philadelphia, to the amount of 63,000 cubic yards, more or less, at 32 cents per cubic yard. Contract expires August 1, 1873.
Curtis & Fobes, with Lieutenant-Colonel George Thom, Corps of Engineers.	Sept. 17, 1872	For doing all the dredging that may be required in Back Bay, Portland, Maine, at 25 cents per cubic yard. Contract expires June 15, 1873.
J. E. Simpson & Co., with Lieutenant-Colonel J. D. Kurtz, Corps of Engineers.	Sept. 18, 1872	For furnishing all the materials and doing all the work necessary to complete the unfinished pier in the harbor of New Castle, Delaware, for \$6 685. Contract expires May 1, 1873.
American Dredging Co., with Lieutenant-Colonel J. D. Kurtz, Corps of Engineers.	Sept. 20, 1872	For removing the remains of an old pier of crib-work filled with stone at Philadelphia, at \$2,150 for its entire removal. Contract expired January 1, 1873.
Benjamin Maillefert, with Major Q. A. Gillmore, Corps of Engineers.	Sept. 20, 1872	For removing the wrecks of the monitor Weehawken and wooden man-of-war Housatonic and the torpedo-boat; also the wreck of the small river steamer from the harbor of Charleston, South Carolina, at \$4,750 for the Weehawken, \$3,700 for the Housatonic and torpedo-boat, and \$2,150 for the wreck near Fort Sumter, including the proceeds of the wrecks. Contract expires August 1, 1873.
Howard Cook, with Lieutenant-Colonel W. F. Reynolds, Corps of Engineers.	Sept. 21, 1872	For dredging in the Osage River, Missouri, at 35 cents per cubic yard. Contract expires July 1, 1873.
Eager, Ellerman & Co., with Captain C. W. Howell, Corps of Engineers.	Sept. 24, 1872	For constructing a timber dam across Tone's Bayou, Louisiana, at \$18,920. Contract expires June 30, 1873.
James Clark, with Colonel J. N. Macomb, Corps of Engineers.	Sept. 25, 1872	For furnishing cement for lower and middle locks of the canal at the Des Moines Rapids of the Mississippi River, at \$2.48 for hydraulic cement, delivered in casks; \$25 for use of lime-houses for storing cement at lower lock; \$10 for attention and care of cement at lower lock; \$50 for use of lime-house for storing cement at middle lock; \$16 for attention and care of cement at middle lock. Contract expired December 31, 1872.
Willard Johnson, with Lieutenant-Colonel W. F. Reynolds, Corps of Engineers.	Sept. 25, 1872	For furnishing all the brush and stone required for the improvement of the Mississippi River between the mouth of the Illinois River and the mouth of the Missouri River, for the construction of a dam or dams at Alton slough, at \$2.20 per cord for brush, and \$1.45 per cubic yard for riprap stone. Contract expired January 1, 1873.
Do.....	Sept. 25, 1872	For doing the grading and other work required for the improvement of the Mississippi River between the mouth of the Missouri and the mouth of the Meramec River, at 18 cents per cubic yard for grading; 10 cents per square for spreading McAdam, and prices as agreed upon for other work. Contract expires July 1, 1873.
O. D. Parmelly, with Captain C. W. Howell, Corps of Engineers.	Sept. 25, 1872	For removing all timber obstructions to navigation at low water from the Tangipahoa River and its banks, Louisiana, between Wells' Ferry and the mouth of the river, at \$2,200. Contract expires June 30, 1873.

E. R. Seward, with Lieutenant-Colonel John Newton, Corps of Engineers.	Sept. 28, 1872	For dredging 6,600 cubic yards, more or less, in Otter Creek, Vermont, at 39 cents per cubic yard. Contract expires June 30, 1873.
C. H. Bragdon, with Lieutenant-Colonel George Thom, Corps of Engineers.	Sept. 28, 1872	For furnishing stone for the breakwater at Saco, Maine, at \$1.28 per ton for large stone and \$1.18 for small stone. Contract expired November 30, 1872.
James D. Leary, with Lieutenant-Colonel John Newton, Corps of Engineers.	Sept. 28, 1872	For the construction of a crib for the extension of the breakwater at Plattsburgh, Vermont, at \$67.93 per linear foot for the crib-work complete and sunk in position, and \$23.93 per linear foot for the superstructure. Contract expires December 31, 1873.
Dull & Williams, with Colonel J. N. Macomb, Corps of Engineers.	Sept. 28, 1872	For excavating and removing from the bottom of the Mississippi River at the Upper or Rock Island Rapids, all rock and other material necessary to make a continuous channel through the same, at \$12.50 per cubic yard at Winnebago Island; \$14.50 for patches between St. Louis and Campbell's chains, and between Campbell's and Winnebago Island. Contract expires June 1, 1873.
H. C. Woodrow, secretary Grafton Stone Transportation Company, with Lieutenant-Colonel W. F. Reynolds, Corps of Engineers.	Sept. 30, 1872	For furnishing stone and brush for improvement of the Mississippi River between the mouth of the Missouri and the mouth of the Meramec, at \$1.85 per cubic yard for stone in revetment; \$1.15 per cubic yard for stone in riprap; \$4 per square for McAdam; \$4.95 per cord for first-grade brush; and 4.45 per cord for second-grade brush. Contract expires July 1, 1873.
Joel Griffin, with Major Q. A. Gillmore, Corps of Engineers.	Sept. 30, 1872	For removing a small sunken (loaded) schooner and 13 wooden piles in Ashpoo River, South Carolina, for \$1,200. Contract expires January 1, 1873.
Do.....	Sept. 30, 1872	For removing the wrecks of three small wooden vessels lying across the channel of Church Flats in the Stono River, South Carolina, near Charleston, at \$1,800. Contract expires February 1, 1873.
Do.....	Sept. 30, 1872	For removing a portion of the stone jettee, known as "Bowman's Jettee," near Fort Moultrie in Charleston Harbor, at \$4.50 for each cubic yard removed and piled; and \$1,000 and the materials of the wrecks for removing the wreck of a small steamer lying on and near the outer end of said jettee, to a depth of 20 feet at mean low water. Contract expires August 1, 1872.
Gage & Powley, with Lieutenant-Colonel John Newton, Corps of Engineers.	Sept. 30, 1872	For the construction of a pile-dike at Rondout, Hudson River, at entrance of Rondout Creek, at \$9.89 per linear foot, dike complete and filled with stone. Contract expires June 30, 1873.
Thomas J. Hill, with Major G. K. Warren, Corps of Engineers.	Oct. 1, 1872	For excavating in the Providence River, Rhode Island, at the crook and opposite Sassafraz Point, at 25 cents per cubic yard for the former and 37½ for the latter. Contract expires June 30, 1873.
Francis H. Smith, with Major G. K. Warren, Corps of Engineers.	Oct. 1, 1872	For excavating in Housatonic River, Connecticut, between Huntington Landing and Derby, at Two Mile Island Bar, at Crofut's Bar, and, if required, at the mouth of the river, at 23.95 per cubic yard. Contract expires June 30, 1873.
P. L. Dews, with Major G. Weitzel, Corps of Engineers.	Oct. 5, 1872	For doing the work for the improvement of the Cumberland River in accordance with the specifications, at \$5.65 for rock excavation, \$2.35 for riprap dam, \$1 for dredging per cubic yard, and \$300 for removing trees and snags. Contract expired January 1, 1873.
George D. Nagle, with Major G. H. Mendell, Corps of Engineers.	Oct. 1, 1872	For furnishing and putting in place on the line of the breakwater at Wilmington, California, not to exceed 15,000 tons stone, at \$4.25 per ton, and for pieces weighing 200 pounds or less, \$3.49 per ton, in coin or its equivalent. Contract expires June 30, 1873.
J. F. Stephen, with Major H. M. Robert, Corps of Engineers.	Oct. 9, 1872	For the construction of two dumping-scows, for use on the Willamette River, at \$5,200 in legal-tender notes. Contract expires 90 days after closing contract.
T. J. Bulger, with Major H. M. Robert, Corps of Engineers.	Oct. 9, 1872	For constructing a dredge-boat for the Willamette River, Oregon, at \$5,149 in legal-tender notes. Contract expired November 28, 1872.
Willamette Iron-Works Company, with Major H. M. Robert, Corps of Engineers.	Oct. 9, 1872	For the construction of an engine and boiler for the dredge-boat for the Willamette River, Oregon, at \$6,744 in United States legal-tender notes. Contract expired November 28, 1872.
J. B. Montgomery, with Major H. M. Robert, Corps of Engineers.	Oct. 12, 1872	For removing rocks and bowlders from the channel of the Columbia River, Oregon, at the following places and prices: John Day Rock, \$24,100; Devil's Bend, \$8,550; Umatilla Rapids, \$10,000; and for every cubic yard of rock over 200 yards at Umatilla Rapids, \$25. Contract expires April 30, 1873.
Charles Johnson, with Lieutenant Colonel John Newton, Corps of Engineers.	Oct. 14, 1872	For constructing in the Hudson River the following pile-dikes, viz: The northern and southern extensions of the Middle Ground Dike; the completion of the Roah Hook Dike; the extension of Barren Island Dike; the upper and lower sections of the Cedar Hill Dikes; at \$8.97 for the northern extension of Middle Ground Dike, per linear foot; \$5.32 for southern extension of same; \$8 for Roah Hook Dike; \$7.10 for extension of Barren Island Dike; \$6.08 for upper section of Cedar Hill Dike; and \$9.75 for lower section of same; all to be complete and filled with stone. Contract expires June 30, 1873.
A. R. Wright, with Lieutenant Colonel George Thom, Corps of Engineers.	Oct. 26, 1872	For dredging in the harbor of Duxbury, Massachusetts, 17,000 cubic yards, more or less, at 50 cents per cubic yard, measured in the scows. Contract expires June 30, 1873.

Contractors.	Date.	Objects and terms of contracts.	
Edward Moore, with Lieutenant Colonel George Thom, Corps of Engineers.	Oct. 26, 1872	For excavating and removing the ledge from the lower part of the gulf in the Cochecho River, within the town of Dover, New Hampshire, at \$26.50 per cubic yard. Contract expires June 30, 1873.	
S. A. Hooper, with Colonel J. N. Macomb, Corps of Engineers.	Oct. 29, 1872	For removing snags, logs, stumps, and trees from the Minnesota River, at \$2 for those 4 inches in diameter, and not exceeding 6 inches; \$5 for 6 inches to 20 inches; \$6 from 20 inches to 30 inches; \$8 from 30 inches to 36 inches; \$11 from 36 inches to 42 inches; \$15 from 42 inches to 48 inches. For removing overhanging trees from the banks of the following dimensions, measured one foot above the roots, 75 cents for those 4 inches in diameter, and not exceeding 6 inches; \$1.75 for 6 inches to 20 inches; \$2.50 for 20 inches to 30 inches; \$2.75 for 30 inches to 36 inches; \$3 for 36 inches to 42 inches; \$4 for 42 inches to 48 inches, each; and \$5 per cubic yard for bowlders. Contract expires June 30, 1873.	
Paulding, Kemble & Co., with Lieutenant Colonel J. D. Kurtz, Corps of Engineers.	Oct. 31, 1872	For furnishing one-half of the iron-work for the new United States iron landing-pier now being built at (near) Lewes, Delaware, at 12 cents per pound for all rolled iron; 8½ cents for pile-shafts; 35 cents for screw-buckles; 16 cents for bolts and nuts; 20 cents for collars and clamps; 6½ cents for cast-iron screws and caps; and 45 cents per 100 pounds additional if 10,000 pounds be delivered at railroad-station at Lewes; 35 cents per 100 extra if delivered in quantities of 10,000 pounds at the landing-pier; 40 cents if delivered at railroad-station in quantities of 50,000 pounds; 30 cents if delivered at landing-pier in quantities of 50,000 pounds. Contract expires July 1, 1873.	
David Symons, with Major Q. A. Gillmore, Corps of Engineers.	Oct. 31, 1872	For removing from the channel of the Savannah River, Georgia, 10 cribs and 1 wreck, at \$790 for the cribs, and the same amount for the wreck. Contract expires April 1, 1873.	
Macpherson, Willard & Co., with Lieutenant-Colonel J. D. Kurtz, Corps of Engineers.	Nov. 4, 1872	For delivering for the United States landing (iron) pier near Lewes, Delaware, one-fourth of each kind of iron-work set forth in the specifications attached, at 12 cents per pound for rolled iron; and for hammered iron, 8½ cents for pile-shafts; 35 cents for screw-buckles; 16 cents for bolts and nuts; 20 cents for collars and clamps; and 6½ cents for cast-iron screws and caps. If delivered at railroad station at Lewes, or at landing-pier, to be paid 25 cents per 100 pounds extra; or if delivered at railroad station at Lewes, or at landing pier, in quantities of 50,000 pounds, 25 cents per 100 pounds extra. Contract expires July 1, 1873.	
G. Andrews, president New Orleans Wrecking and Salvage Company, with Captain C. W. Howell, Corps of Engineers.	Nov. 12, 1872	For totally removing from the Tchefuncte River, Louisiana, near the town of Covington, the wreck of the steamer Oregon, at \$4,850. Contract expires June 30, 1873.	
S. R. Dickson, with Major O. E. Babcock, Corps of Engineers.	Nov. 13, 1872	For constructing and putting in place a wrought-iron bridge over the Potomac River, on piers and abutments now standing at the site known as the Chain Bridge, in conformity with specifications attached to and made part of the contract, complete, for \$98,875. Contract expires June 1, 1873.	
Morris & Cummings, with Lieutenant-Colonel John Newton, Corps of Engineers.	Nov. 22, 1872	For dredging the bar at Belleville, on the Passaic River, New Jersey, at \$1.10 per cubic yard for dredging and depositing stone and bowlders, and 90 cents per cubic yard for removing sand and gravel. Contract expires June 30, 1873.	
John Grant, with Colonel J. H. Simpson, Corps of Engineers.	Nov. 22, 1872	For excavating and removing 125,000 cubic yards of material from Dog River Bar, Mobile Bay, Alabama, at 30 cents per cubic yard. Contract expires December 7, 1873.	
Strausz & Rice, with Major W. P. Craighill, Corps of Engineers.	Dec. 16, 1872	For furnishing 4,000 cubic yards of stone for the improvement of the Cape Fear River, at \$4 per cubic yard. Contract expires April 16, 1873.	

Abstract of contracts made by the Quartermaster's Department during the year ended December 31, 1872, and those made prior thereto, but not received in time to be included in the last report.

No.	Place and date.	Parties.	Nature of contract.	Bond.
1	Fort Bayard, N. M., September 18, 1871.	Captain A. J. McGonnigle, with H. Kimberlin.	For 100,000 pounds of corn, at 2½ cents per pound.	\$2,000
2	Fort Selden, N. M., September 12, 1871.	Same, with H. Lesinsky.	For 15,000 pounds of bran, at 2½ cents per pound.	300
3	Fort Craig, N. M., September 12, 1871.	Same, with N. Reymond.	For 200,000 pounds of corn, at 2½ cents per pound.	4,000
4	Fort Stanton, N. M., September 25, 1871.	Same, with O. W. McCullough.	For 70,000 pounds of corn, at 2½ cents per pound.	1,000
5	Fort Union Depot, N. M., Sept. 11, 1871.	Same, with W. Kronig.	For 50,000 pounds of oats, at 2½ cents per pound.	1,000
6	Fort Bayard, N. M., September 9, 1871.	Same, with J. E. Griggs.	For 650,000 pounds of corn, at 2 7-10 cents per pound.	10,000
7	Fort Craig, N. M., September 1, 1871.	Same, with M. Vigel.	For 300 cords of wood, at \$4.89 per cord.	1,000
8	Santa Fé, N. M., September 12, 1871.	Same, with S. Wedeles.	For 10,000 pounds of bran, at 2 3-5 cents per pound.	200
9	Fort Union Depot, N. M., Sept. 11, 1871.	Same, with W. Kronig.	For 200,000 pounds of corn, at 2½ cents per pound.	3,000

QUARTERMASTER GENERAL'S OFFICE, January 6, 1873.

M. C. MEIGS, Quartermaster General, Brevet Major-General, U. S. A.

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., January 16, 1873.

SIR: In pursuance of the act of Congress approved April 21, 1808, and in compliance with requirements of Mis. Doc. No. 1, Forty-second Congress, third session, I have the honor to report that, during the year 1871, the only contract entered into by this office was with Stephen H. Condict, of the city of New York, for signal equipments, which was duly executed in accordance with provisions of same.

Very respectfully, your obedient servant,

ALBERT J. MYER,
Brigadier-General and Chief Signal-Officer of the Army.

The Hon. the SECRETARY OF WAR,
Washington, D. C.

WAR DEPARTMENT,
OFFICE OF THE CHIEF SIGNAL-OFFICER,
Washington, D. C., January 17, 1873.

SIR: In compliance with requirements of an act of Congress approved April 21, 1808, I have the honor to report that there were no contracts entered into by this office during the year ending December 31, 1872.

Very respectfully, your obedient servant,

ALBERT J. MYER,
Brigadier-General and Chief Signal Officer of the Army.

The Hon. the SECRETARY OF WAR,
Washington, D. C.

BANKING FACILITIES BETWEEN THE UNITED STATES AND
CHINA.

LETTER

FROM

THE SECRETARY OF STATE,

INCLOSING

A communication from the consul at Hong-Kong, China, in relation to the manner of transacting business between citizens of the United States and the East, with a letter from the Secretary of the Treasury on the same subject.

JANUARY 30, 1873.—Referred to the Committee on Foreign Affairs and ordered to be printed.

DEPARTMENT OF STATE,
Washington, January 25, 1873.

SIR: I have the honor to lay before you a copy of dispatch No. 152, from Mr. David H. Bailey, the consul of the United States at Hong Kong, on the subject of the necessity for greater banking facilities between the United States and the East, and also a copy of a letter addressed to this Department by the Secretary of the Treasury, to whom the dispatch was referred.

Should you concur in the recommendation made in the letter of the Secretary of the Treasury, with regard to the publication of the dispatch, it is suggested that it be submitted to the House of Representatives in order to be printed.

I have the honor to be, sir, your obedient servant,
HAMILTON FISH.

Hon. N. P. BANKS,
House of Representatives.

Inclosures.

1. Mr. Bailey to Mr. Hale—No. 152—dated October 10, 1872.
2. Mr. Boutwell to Mr. Fish, January 23, 1873.

No. 152.]

UNITED STATES CONSULATE,
Hong-Kong, October 10, 1872.

SIR: I have the honor to submit the following suggestions for such action or reference as the Department may think proper.

For some time my attention has been drawn to the importance of closer and more direct banking facilities between the United States and China. The great and rapidly augmenting trade between the two countries would seem to demand new and cheaper channels for the immense sums of money floating to and fro. In other words, more direct and economical facilities, by which the benefit of direct exchange and its lower rate would accrue more directly to Americans and to those engaged in commerce between Eastern Asia and the United States.

As a natural consequence of such an improvement, a certain percentage would be saved, by which goods could be laid down in America cheaper than under the course pursued now. If this percentage be only a trifle, the total will show a heavy sum in the end.

At present, all the vast sums of money passing between America and Asia are paying enormous tribute to London.

San Francisco, Shanghai and Hong-Kong, facing each other on opposite shores of the Pacific, go round the world to pay each other in Lombard street; an anomaly which it seems to me need not be, and which can and ought to be abrogated.

It is a well-known fact that the balance of trade between America and Europe (England largely predominating) is usually against the former. This deficit is made up by both North and South America sending bullion and specie to Europe. The United States imports from China, Japan, the Philippine Islands, and East India, annually, to the extent of about (approximately) \$50,000,000, (Mexican money.) By far the greatest portion of this import is paid for by America in London. Thus the United States annually adds to the debts already existing against her in Europe the amount of her imports from the East. For attending to this financiering of our commerce in the East, London banks and bankers charge, as commission, 2 per cent. on the amount drawn. The English banks in the East have, say, $\frac{1}{2}$ per cent. profit on the transaction for negotiating the paper.

Sometimes it is much greater if fluctuations in bullion and exchange are favorable. The same silver and dollars that are sent from America to England, as a rule, are forwarded from London to India and China, to cover the deficit of the English importations into these countries against the exports; and thus this bullion and specie is burdened by additional freight, insurance, and interest, before reaching its destination, by the circumlocution route via England, instead of coming direct from California.

We have thus: 2 per cent. London banking commission; $\frac{1}{2}$ per cent. to 1 per cent. profit or charges of the banks in China and India; $\frac{1}{2}$ per cent. to 1 per cent., at least, additional expense on treasure; say from 3 to 4 per cent., at the very lowest, which our importers and consumers of eastern produce pay to England for negotiating American bills drawn in China, India, &c., on London. I think, however, that, on an average, 4 per cent. is nearer the mark than 3.

If England were at any time in debt to America it would be natural enough for her to pay our debts in the East, but the reverse being the case, why should America pay a tax of 4 per cent. on her large eastern commerce? Simply because it is the way in which the business has been done for years; and American financiers and business men have not yet realized the change that can and will be effected through the opening of steam communication between California and Asia, and thence to India, and further, because those who have been holding the monopoly so long are straining every nerve to retain it. With steamers running across the Pacific, our railroads spanning the con-

continent, and cables uniting America and Asia, there is no longer any necessity for England acting as America's financial agent in the East.

If a banking profit has to be made on exports to the United States, American banks and bankers can and ought to make it, and do the business more cheaply than it can be done by way of London.

In case of a war between England and the United States the trade of the latter with the East, though conveyances be plentiful, would of a sudden be stopped, as English credits would be wanting, a most serious though remote consideration.

So far, a direct exchange business between China and America by drafts on New York or San Francisco has been quite insignificant. One or two banks are buying such paper, but with considerable restrictions, and at rates only which are on a par with sterling, therefore affording no saving to the drawer. Direct credits on New York, to be availed of in the East, are refused by the principal banking-houses at New York with headquarters in London.

The plan that suggests itself is for a powerful American bank or company of bankers to establish branches at all the chief places of trade in the East, and issue credits and buy drafts direct on New York, San Francisco, and other centers, and thereby get the control of the American-Asiatic trade. The scheme is natural and legitimate, and everything that is natural and legitimate is, as a rule, successful. There is no saying that the time may not come when the stream of bullion and dollars, now leaving Mexico, Peru, and other South American countries, will flow into one great reservoir, one of the great commercial centers of the United States, whether it be New York or San Francisco, and that there the balances of the whole world will be adjusted.

As a corollary to the banking or exchange question, I may suggest the great importance of a coinage by the Government to meet the requirements of the Asiatic trade, or more especially that of China. Permit me to express the opinion that—

1. A dollar of the same intrinsic value as the Mexican, to serve for currency in China, should be coined by the United States.

2. A sufficient quantity of these dollars should be shipped on trial, and, if possible, a declaration obtained from the Peking government, declaring them a legal tender in all trade transactions, and for payment of custom-house dues, and forbidding their being *chopped*.

3. The dollars to be, once for all, of a uniform coinage, and as closely resembling the Mexican dollar as may be expedient.

If, as it may be supposed, the scheme is successful, gold coin will soon follow, and instead of America shipping her gold and silver in bars to Europe, she will find a vast market for her coins in the East, and get, thereby, an enormous hold on this great trade.

I have the honor to be, sir, your obedient servant,

DAVID H. BAILEY,
United States Consul.

Hon. CHARLES HALE,
Assistant Secretary of State, Washington, D. C.

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
January 23, 1873.

SIR: I have the honor to acknowledge the receipt of your communication of the 13th instant, covering the dispatch of Mr. D. H. Bailey,

consul at Hong-Kong, under date of October 10, in which he discusses the necessity of greater banking facilities between the United States and the East.

The views presented by Mr. Bailey are of great importance; but of the suggestions made by him there is only one—that relating to the coinage of silver dollar equal in value to the Mexican dollar—that can be acted upon by the Government. In respect to this I am happy to be able to say that, upon a recommendation made by this Department, a provision is incorporated in the mint bill, now pending in conference committee of the two Houses of Congress, authorizing the issue of silver coin of a value quite equal to the Mexican dollar, and designed for use in the trade between this country and China.

Allow me to suggest that the publication of Mr. Bailey's dispatch, by calling the attention of bankers to the subject, might lead to a course of business on their part which would result in securing to this country the advantages so clearly set forth by him.

The dispatch, No. 152, is herewith returned.

Very respectfully,

GEO. S. BOUTWELL,
Secretary.

Hon. HAMILTON FISH,
Secretary of State.

APPOINTMENT OF CLERKS IN THE STATE DEPARTMENT.

LETTER

FROM

THE SECRETARY OF STATE,

RELATIVE TO

The appointment of clerks in his Department during the year 1872.

JANUARY 31, 1873.—Referred to the Committee on Civil Service and ordered to be printed.

DEPARTMENT OF STATE,
Washington, January 27, 1873.

SIR: In compliance with the resolution of the House of Representatives of the 18th instant, requesting information in regard to the appointment of clerks in this Department during the year 1872, I have the honor to state that the appointment of John Davis, of Massachusetts, is the only appointment of a clerk made in the Department of State during the year above mentioned. The appointment was made under the operation of the civil-service regulations.

I have the honor to be, sir, your obedient servant,
HAMILTON FISH.

Hon. JAMES G. BLAINE,
Speaker of the House of Representatives.

THE STATE OF TEXAS,
COUNTY OF DALLAS.

I, the undersigned, Clerk of the County of Dallas, do hereby certify that the within and foregoing is a true and correct copy of the original as the same appears in the records of the County of Dallas.

IN WITNESS WHEREOF, I have hereunto set my hand and the seal of the County of Dallas, this _____ day of _____, 19____.

CLERK OF THE COUNTY OF DALLAS.

Subscribed and sworn to before me this _____ day of _____, 19____.

FREEDMEN'S HOSPITAL IN DISTRICT OF COLUMBIA.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The condition of the Freedmen's Hospital in the District of Columbia.

JANUARY 31, 1873.—Referred to the Committee on Military Affairs and ordered to be printed.

WAR DEPARTMENT, *January 29, 1873.*

The Secretary of War has the honor to transmit to the House of Representatives, in compliance with the resolution of the 24th instant, copies of the report of Surgeon-General J. K. Barnes and Inspector-General Edward Schriver relative to the condition of the Freedmen's Hospital in the District of Columbia.

Assistant-Surgeon Billings has never made, or been called on to make, a report in relation to that institution.

WM. W. BELKNAP,
Secretary of War.

REPORT ON RENT OF FREEDMEN'S HOSPITAL.

SURGEON-GENERAL'S OFFICE,
July 13, 1872.

Respectfully returned to the Hon. Secretary of War. A careful inspection of the premises shows that the Freedmen's Hospital is in joint occupancy by the United States and the Howard University, which cannot be terminated without injury to both the hospital and the university. The main building is, in reality, the medical college of the university, containing its lecture, operating, and dissecting-rooms, laboratory, and offices for professors, in addition to the rooms on the first and second floors, occupied for hospital purposes. As the water-supply, heating, and lighting of this building cannot be separated from the general system of expenditure for the entire hospital, it is considered that the cost for water-supply, heating, and lighting the entire building is a full equivalent of rent for the portion of it occupied for hospital purposes.

The three wards now occupied, with the kitchen, laundry, engine-house, and out-buildings, and the new ward not yet completed, are

frame structures of an inexpensive and temporary character, for the occupancy of which, with all the privileges and appurtenances heretofore included, a yearly rent of two thousand dollars is considered ample and liberal.

Outside of the inclosure are other buildings belonging to the Howard University, in part occupied by indigent colored people, by old women and children, who draw rations from the hospital, but are not patients. Rent for the buildings and rooms so occupied has hitherto been paid by the commissioner of freedmen to the Howard University from the appropriation for the support of the hospital, exclusive of rent for hospital; but as all these buildings were erected at Government expense, it is respectfully recommended that no rent for them be paid after July 1, 1872, and that the issue of rations from the hospital be only continued as a matter of necessity, and in cases of absolute need.

J. K. BARNES,
Surgeon-General.

SURGEON-GENERAL'S OFFICE,
January 28, 1873.

A true copy:

C. H. CRANE,
Assistant Surgeon-General, United States Army.

The rent for the buildings occupied by the Freedmen's Hospital, as fixed by the honorable Secretary of War, was \$2,000 per annum,—not \$1,000, as stated by General Howard,—this valuation being made after careful inspection by the Surgeon-General and by Inspector-General Schriver.

In addition to this, the appropriation for the support of the Freedmen's Hospital bears all the expense of heating and lighting the Howard Medical University—the only expensive and permanent structure of those rented, and of which but a very small portion is available for hospital use.

In carrying out the order of the Secretary of War the Surgeon-General has been very careful not to decrease or interfere with the educational features of the hospital, and the professors are in full enjoyment of their usual facilities.

Under former act of Congress the Freedmen's Bureau was authorized to devote certain property to educational purposes, but the appropriation for the Freedmen's hospital and asylum conveys no such power.

It is not thought that this appropriation will materially exceed expenditures for the current fiscal year; but even if it should, the support of the Howard University cannot be considered legitimately chargeable to it; and, so far as the welfare of the inmates is concerned, it appears highly desirable that the cost of their support and treatment should be kept at a minimum, thus affording the assurance to Congress that future appropriation need not be excessive, and will be strictly devoted to the purposes designated.

Very respectfully, your obedient servant,

J. K. BARNES,
Surgeon-General.

SURGEON-GENERAL'S OFFICE,
January 28, 1873.

A true copy:

C. H. CRANE,
Assistant Surgeon-General, United States Army.

WAR DEPARTMENT, WASHINGTON CITY,
July 1, 1872.

In accordance with the Judge-Advocate-General's recommendation, the case was referred to the commissioner of freedmen, who made the following statement, to which some explanatory remarks, derived from the records of the "Howard investigation" by the House of Representatives, have been added.

A portion of the land, including an old building thereon, (marked B on the accompanying plat,) on which the hospital is, was purchased from Geo. W. Balloch, "trustee of retained bounty fund," by the Howard University, for six thousand dollars. The deed bears date of "June 30, 1869." (See page 284 of vol. "Howard Investigation.") Balloch says he paid J. A. Smith twelve thousand dollars (\$12,000) for the property, and gives as a reason for selling it for half that sum to the Howard University that he received in rents for the property, and in interest on the bonds in which the fund is invested, enough to make up the balance, feeling perfectly justified in doing so in view of "the unfortunate class benefited."

The rents referred to were paid by the Freedmen's Bureau, at the rate of \$1,200 a year, to the trustee of the fund, Balloch. For the origin of this fund see Balloch's statement at page 283 of vol.

Another portion of land adjacent to the above, including a brick building standing thereon (C,) was purchased for seven thousand dollars by the Howard University from Beckert. (See page 283 of vol.)

On these two pieces of land five additional buildings were erected by the commissioner of freedmen from appropriations, directly and indirectly, by Congress, for educational purposes, and for asylums for relief.

On 5th November, 1868, the commissioner asked Secretary of War, Schofield, for authority to transfer buildings to association on whose land they stood, in consideration of a formal guarantee that such buildings, or the proceeds of their rental or sale, shall be donated perpetually to educational purposes, irrespective of the race or color of the pupils. (See page 499 of vol.)

The Judge-Advocate-General, to whom the subject was referred for opinion as to the authority of law for such proposed transfer, gave that at page 500 of vol.

On the 11th November, 1868, with Secretary Schofield's approval, the commissioner issued a circular in conformity to said opinion, (see page 500 of vol. ;) but on the 23d December, 1868, the Secretary ordered an exception to be made in the case of the "Howard College," (University.) (See page 501.)

On September 1, 1869, Secretary of War Rawlins authorized the commissioner to treat buildings in the District of Columbia like those erected in other districts, and, accordingly, the "exception" being removed, on the 30th September, 1869, all the buildings then erected by the Freedmen's Bureau, or carried on its property returns, situated on lots on which is the hospital in question, described as embraced in square 640, (see pages 501-502,) were transferred to the Howard University, to which an annual rent of five thousand dollars (\$5,000) has been paid therefor ever since by the Freedmen's Bureau.

From the above statement the Howard University seems to have clear title to the land and buildings thereon, and it is not seen, therefore, why rent should not be paid to that institution if the hospital buildings continue in the occupancy of the United States. This opin-

ion is concurred in by Col. Winthrop of the Judge-Advocate's Department, with whom I conferred by direction of the Secretary of War.

Whether the rate of rent which has been paid is not exorbitant may be ascertained by appraising the property. But in fixing the rate to be paid by the United States in future, it is suggested whether the fact of the buildings having been constructed with Government funds, regularly appropriated, the fact of the lands having been purchased *virtually* with funds derived from the Government, and the fact that the "unfortunate class to be benefited" and cared for in the hospital in question, should not be taken into consideration.

Respectfully submitted.

ED. SCHRIVER,
Inspector-General.

The Honorable the SECRETARY OF WAR.

○

MATERIALS OF OLD PENITENTIARY IN WASHINGTON.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The taking down and removing the material of the old penitentiary situated on the Washington arsenal grounds.

JANUARY 31, 1873.—Referred to the Committee on Public Buildings and Grounds and ordered to be printed.

WAR DEPARTMENT,
January 30, 1873.

The Secretary of War has the honor to transmit to the House of Representatives, for the information of the Committee of Claims, as requested in letter of said committee of the 20th instant, copy of the contract entered into on the 13th September, 1867, between J. T. Stockbridge and Brevet Major-General George D. Ramsay, for taking down and removing the material of the old penitentiary, situated on the arsenal grounds, and copies of all correspondence relating to the same, on file in the office of the Chief of Ordnance.

The views of the commanding officer of the Washington arsenal, as expressed in this correspondence, are concurred in by this Department.

WM. W. BELKNAP,
Secretary of War.

UNITED STATES OF AMERICA.

WAR DEPARTMENT, *January —, 1873.*

Pursuant to the act of Congress of the 22d February, 1849, I hereby certify that the papers hereto attached are true copies of the originals on file in the Ordnance Bureau of this Department.

In witness whereof I have hereunto set my hand and caused the seal of the War Department to be affixed, on the day and year first above written.

[SEAL.]

WM. W. BELKNAP,
Secretary of War.

WASHINGTON ARSENAL,
September 21, 1867.

SIR: The "proposals for taking down the penitentiary buildings and walls" were opened to-day at 12 o'clock m., in accordance with my advertisement, dated September 9, 1867. They were in number forty-two, and ranged in prices as follows, viz:

Highest bid being \$41,214.72.

Lowest bid being \$7,500.

Very respectfully,

GEO. D. RAMSAY,
Brevet Major-General, Commanding

Gen. A. B. DYER,
Chief of Ordnance.

WASHINGTON ARSENAL,
October 22, 1867.

SIR: I have the honor to transmit herewith a copy of a contract made by me with J. T. Stockbridge, of Washington, D. C., "for taking down the penitentiary buildings on the arsenal grounds."

Very respectfully, your obedient servant,

GEO. D. RAMSAY,
Brevet Major-General, U. S. A., Commanding.

Gen. A. B. DYER,
Chief of Ordnance, Washington, D. C.

[Duplicate.]

[5-cent revenue stamp here.]

This contract, made and entered into this thirteenth day of September, one thousand eight hundred and sixty-seven, between J. T. Stockbridge, of Washington, in the District of Columbia, of the first part, and the United States, by Brevet Major-General George D. Ramsay, acting under direction and by authority of the Secretary of War, for and in their behalf, of the second part, witnesseth: That the party of the first part do hereby contract and engage with the said United States to take down all of the buildings, walls, &c., heretofore known as the penitentiary of the District of Columbia, with the exception of the houses on the east and west fronts. The party of the first part agree to commence said work on the 7th of October, and to carry it on so as to complete it in ninety days. It is agreed that for the faithful performance and strict compliance with this contract the United States, through the commanding officer of the Washington arsenal, shall pay the party of the first part the sum of seven thousand five hundred dollars (\$7,500) in lawful money of the United States; and the aforesaid party of the first part do further contract and agree to remove all of the materials, viz, slate, stone, brick, iron-work, wood-work, including roofing, doors, window-frames, water-gutters, and spouts, foundation stone, pavements, lightning-rods, &c., at present constituting the said penitentiary buildings, inclosing and connecting walls; to clean the bricks and bats in a manner suitable for building purposes; to pile the same and all other materials in a neat and compact manner, each separately and according to its kind, on such localities as shall be named contiguous to the premises aforesaid by the party of the second part. And that all of the aforesaid materials, as specified, are to be taken down and removed with proper care, and in all cases of any injury to the same from inattention or neglect, the amount shall be duly estimated and charged to the party of the first part. And, finally, it is hereby mutually stipulated and agreed that the specifications hereto annexed are, and the same are hereby, made part of this contract.

The above mentioned work is to be finished by the said party of the first part; and all claims under this contract, if transferred to another party, are to be by such transfer forfeited, saving the rights of the United States. Payments, in such funds as the Treasury Department may provide, are to be made on the faithful completion of the said work, within the prescribed time, as shall be satisfactory to the party of the second part.

And the said party of the first part do further engage and contract that no member of Congress, officer of the Army, or any agent of the military service, or other person forbidden by law so to do, *is, or shall be*, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

And it is hereby expressly provided, and this contract is upon the express condition, that if any such member of Congress, officer of the Army, or other person above named, *is, or shall be*, admitted to any share or part of this contract, or to any benefit to arise under it, or in case the party of the first part shall in any respect fail to perform this contract on his part, the same may be, at the option of the United States, declared null and void, without affecting their right to recover for defaults which may have occurred.

It is further stipulated and agreed that if any default shall be made by the party of the first part, in complying with the terms of this contract, of the quality and at the times and place therein provided, that then, in that case, the said party will forfeit and pay to the United States the sum of fourteen thousand dollars, as agreed, and liquidated damages.

J. T. STOCKBRIDGE, [SEAL.]

GEO. D. RAMSAY, [SEAL.]

Brevet Major-General, United States Army.

Signed, sealed, and delivered in presence of—

JNO. J. COOK.

Approved:

Brigadier-General, Chief of Ordnance.

[50-cent revenue stamp here.]

Know all men by these presents, that I, J. T. Stockbridge, of Washington, in the District of Columbia, as principal, and John F. Coyle, of Washington, in the District of Columbia, and C. H. Snow, of Washington, in the District of Columbia, as sureties, are held and firmly bound unto the United States of America in the penal sum of fourteen thousand dollars, to be paid to the said United States, or to their certain attorney, for which payment, well and truly to be made, we bind ourselves, our heirs, executors, and administrators, jointly and severally, firmly by these presents. Sealed with our seals, and dated the thirteenth day of September, A. D. 1867.

Whereas the above-bounden J. T. Stockbridge entered into the contract with the United States set forth in the foregoing covenant: now, therefore, the conditions of this obligation are such that if the said J. T. Stockbridge, heirs, executors, or administrators, shall well and faithfully fulfill each and every one of the aforesaid covenants, this obligation to be null and void; otherwise to be and remain in full force and virtue.

J. T. STOCKBRIDGE. [SEAL.]

JOHN F. COYLE. [SEAL.]

C. H. SNOW. [SEAL.]

SPECIFICATIONS FOR TAKING DOWN THE PENITENTIARY BUILDINGS AND WALLS.

First. All the buildings and the walls heretofore constituting the penitentiary of the District of Columbia are to be taken down, with the exception of the houses on the east and west points.

Second. All of material constituting said buildings and walls, viz, slate, stone, brick, iron-work, wood-work, including roofing, doors, window-frames, water-gutters and spouts, foundation-stone, pavements, lightning-rods, &c., are to be removed to a designated locality, and each separately, and according to its kind, piled in a compact manner.

Third. Before being piled, the bricks, including bats, are to be cleaned in a manner suitable for building purposes.

Fourth. The time in which to perform all of the aforesaid work will be distinctly stated in the proposals.

Fifth. The bids will specify the gross sum for the execution of the entire work. No partial bids will be entertained.

Sixth. It is to be distinctly understood that all the aforesaid materials are to be taken down and removed with proper care; and in all cases of any injury to the same from inattention or neglect, the amount shall be duly estimated and charged to the party of the first part.

Seventh. On the faithful completion of the work to the satisfaction of the party of the second part, the full amount agreed upon will be paid in such funds as the treasury may provide.

Eighth. Ample security for the faithful performance of the work will be required.

Ninth. The Government reserves the right of accepting or rejecting bids.

J. T. STOCKBRIDGE.

GEO. D. RAMSAY,

Brevet Major-General, U. S. A.

WASHINGTON ARSENAL,

T. I. GARDNER, J. P.

[5-cent stamp.]

I certify that I have made due and diligent personal inquiry as to the ability of the sureties in this contract, and am satisfied that they are good and sufficient, and fully responsible for the sum of seven thousand dollars each.

T. I. GARDNER,
Justice of the Peace.

AN ACT TO DEFINE THE PAY AND EMOLUMENTS OF CERTAIN OFFICERS OF THE ARMY, AND FOR OTHER PURPOSES, APPROVED JULY 17, 1862.

SECTION 14. That no contract or order, or any interest therein, shall be transferred by the party or parties to whom such contract or order may be given to any other party or parties, and that any such transfer shall cause the annulment of the contract or order transferred, so far as the United States are concerned: *Provided*, That all rights of action are hereby reserved to the United States for any breach of such contract by the contracting party or parties.

SEC. 15. That every person who shall furnish supplies of any kind to the Army or Navy shall be required to mark and distinguish the same with the name or names of the contractors so furnishing said supplies, in such manner as the Secretary of War and the Secretary of the Navy may respectively direct ; and no supplies of any kind shall be received unless so marked and distinguished.

SEC. 16. That whenever any contractor for subsistence, clothing, arms, ammunition, munitions of war, and for every description of supplies for the Army or Navy of the United States, shall be found guilty by a court-martial of fraud or willful neglect of duty, he shall be punished by fine, imprisonment, or such other punishment as the court-martial shall adjudge ; and any person who shall contract to furnish supplies of any kind or description for the Army or Navy, he shall be deemed and taken as a part of the land or naval forces of the United States for which he shall contract to furnish said supplies, and be subject to the rules and regulations for the government of the land and naval forces of the United States.

CIRCULAR No. 2.—SERIES OF 1864.

*Concerning the enforcement of the terms of contracts.*ORDNANCE OFFICE, WAR DEPARTMENT,
Washington, January 1, 1864.

The manner in which the obligations imposed by contracts executed in this office have frequently been interpreted, both by contractors and inspecting officers, as well as the variety of opinions as to the manner of executing their duties which seem to prevail among these officers, render it necessary for the Department to call the attention of all parties interested in contracts to the great importance of a clear understanding of the duties and obligations which appertain to and grow out of them.

Instances have lately been brought to the notice of the Department where contractors admitted that they have signed contracts without reading them over, and bound themselves to conditions of which they have subsequently professed entire ignorance. In such cases as this no excuses are valid.

The Department forces a contract on no person; the obligations such an instrument imposes are voluntarily assumed by the individual, and the presumption is that the signature of a party affixed to a contract is a guarantee that he is fully cognizant of all the obligations and penalties to which he has subscribed.

It must be distinctly understood that it is the intention of the Department, in all cases, to enforce, by every means in its power, the exact terms of all contracts to which it is a party; and all officers intrusted with carrying out the provisions expressed in such instruments are hereby directed to see that they are faithfully executed.

In order that there may be no misunderstanding as to the nature of the duties to be performed by each party to the contract, the following rules will hereafter be observed:

Duties of the inspecting-officer.

The inspecting-officer is charged with the duty of guarding the interests of the Government, and represents the Department in his transactions with the contractor.

He should make himself fully acquainted with the exact terms of every order and contract, the duty of supervising which has been assigned to him; and he is authorized to provide necessary means for carrying out the obligations by which the Government is bound.

He is to select as sub-inspectors men who, by their trade or business, are fully qualified for the duty, and who have no relationship of any kind, either to himself or the contractor.

He will see that the sub-inspectors are so compensated that their interest will be identical with that of the Government they serve.

He should be careful to provide such a number of sub-inspectors that there will be no delay in inspecting stores as fast as presented to him; and he is expected to base his estimate of the number required on the total amount of deliveries specified in the contracts, the inspecting duty connected with which is placed under his charge.

He will pass no stores that are not equal to the prescribed standard in every particular; and when disputes arise between sub-inspectors and contractors on this point, his decision will be final.

Appeals to this office should only be made in extraordinary cases.

Any contractor who tampers with, or either directly or indirectly offers a sub-inspector any compensation, will at once be reported to this office, and all deliveries under his contract suspended until further orders.

Any sub-inspector found violating his oath of office, or accepting any consideration of whatever nature from a contractor, will at once be dismissed, and his name and offense reported to this office and to all other inspecting-officers in the Department.

Duties of the contractor.

Upon receiving notice from this office that his proposal is accepted, he should diligently prepare to execute the contract, although the instrument itself may not reach him for several days.

He must have all the stores which are to be delivered on a specified day at the place of delivery long enough before that time to enable the inspecting officer to properly execute his work.

The inspection is a preliminary step to the reception of stores as much as the manufacture itself; and if stores have not been inspected they do not come within the terms of the contract, and cannot be accepted.

GEO. D. RAMSAY,
Brigadier-General, Chief of Ordnance.

OATH PRESCRIBED BY THE ACT OF CONGRESS APPROVED JULY 2, 1862.

DISTRICT OF COLUMBIA,
County of Washington, ss :

I, J. T. Stockbridge, of Washington, in the county of Washington, and District of Columbia, do solemnly swear that I have never voluntarily borne arms against the United States since I have been a citizen thereof; that I have voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility thereto; that I have neither sought, nor accepted, nor attempted to exercise the functions of any office whatever under any authority or pretended authority in hostility to the United States; that I have not yielded a voluntary support to any pretended government, authority, power or constitution within the United States, hostile or inimical thereto. And I do further swear that, to the best of my knowledge and ability, I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion: So help me God.

J. T. STOCKBRIDGE.

Sworn and subscribed to before me this 30th day of September, 1867.

T. I. GARDNER, J. P.

WASHINGTON ARSENAL,
November 14, 1867.

SIR: On the 30th of September, 1867, I entered into a contract with J. T. Stockbridge, of Washington, for the taking down of the penitentiary buildings, a copy of which was duly transmitted to you, and by the terms of which the work was to be commenced on the 7th of October, 1867, and to be completed in ninety days. More than one-third of this time has elapsed, and but very little progress has been made on the part of the contractor; and since the evening of Saturday last, the 9th instant, when he failed to pay the hands employed, the work has been abandoned, and I have not been able to see or to hold any intercourse with the contractor.

As Mr. Stockbridge has at no time come up to the spirit of the contract, or his personal assurances to me, I feel persuaded that he will not and cannot fulfill the contract. I am, therefore, induced to bring the matter under your consideration, and to ask what, under the circumstances, it is proper for me to do. I am much annoyed by the present state of affairs, and would most gladly undertake the work.

Very respectfully,

GEO. D. RAMSAY,
Brevet Major-General, Commanding.

Major-General A. B. DYER,
Chief of Ordnance.

ORDNANCE OFFICE, WAR DEPARTMENT,
Washington, November 20, 1867.

SIR: Your letter of the 14th instant, reporting that Mr. Stockbridge, the contractor for pulling down the penitentiary, had abandoned the work, and would not, in your opinion, execute the contract, and asking what it was proper for you to do under the circumstances, is received. As Mr. Stockbridge is allowed ninety days from the 30th of September, 1867, to execute his contract, it cannot at present be assumed that he has abandoned the work, or will not execute the contract, unless he has given you notice to that effect; but you should inform his sureties of the condition of the work and of the suspension, so that they may have the opportunity to have the contract fulfilled by other parties in case of the inability of Mr. Stockbridge to execute it.

You should not undertake to execute the work until after the expiration of the time allowed Mr. Stockbridge to do it, unless requested to do so by his sureties.

Respectfully, &c.,

A. B. DYER,
Brevet Major-General, Chief of Ordnance.

Bvt. Maj. Gen. G. D. RAMSAY,
Commanding Washington Arsenal.

WASHINGTON ARSENAL,
January 7, 1868.

SIR: I have the honor to report that the contract entered into between J. T. Stockbridge, of Washington, D. C., and the United States, to take down all of the buildings, walls, &c., heretofore known as the penitentiary of the District of Columbia, has expired this day, by limitation of said contract, and that the said J. T. Stockbridge has failed to fulfill his obligations under the same.

The aforesaid J. T. Stockbridge, as principal, and John Coyle and C. H. Snow, both of Washington, D. C., as sureties, are held and firmly bound unto the United States of America in the penal sum of fourteen thousand dollars.

Very respectfully,

GEO. D. RAMSAY,
Brevet Major-General, Commanding.

Major-General A. B. DYER,
Chief of Ordnance.

ORDNANCE OFFICE, WAR DEPARTMENT,
Washington, D. C., January 8, 1868,

GENTS: The failure of Mr. J. T. Stockbridge, of this city, to fulfill the obligations of the contract with the United States to take down the building at Washington arsenal known as the penitentiary, has been officially reported to this office. As you are the sureties of Mr. Stockbridge, and are held and bound for the faithful performance of the obligations of his contract in the penal sum of fourteen thousand dollars, you are hereby notified of the failure of your principal, as before stated, before taking measures for the enforcement of the penalty of your bond.

Respectfully, &c.,

A. B. DYER,
Brevet Major-General, Chief of Ordnance.

Messrs. JOHN COYLE and C. H. SNOW,
Washington, D. C.

ORDNANCE OFFICE, WAR DEPARTMENT,
Washington, D. C., January 13, 1868.

SIR: Your letter reporting the execution of the contract to take down the penitentiary buildings at Washington arsenal, and the failure of the contractor to fulfill his obligations, has been received. You will now take such measures for having the work done as may be most advisable and advantageous to the public interest.

Respectfully, &c.,

A. B. DYER,
Brevet Major-General, Chief of Ordnance.

Bvt. Maj.-Gen. G. D. RAMSAY,
Commanding Washington Arsenal.

ORDNANCE OFFICE, WAR DEPARTMENT,
Washington, D. C., January 13, 1868.

GENERAL: I inclose herewith a letter from Brevet Major-General Ramsay, reporting the failure of the contractor, Mr. J. T. Stockbridge, to take down the penitentiary building, at Washington arsenal, according to the requirements of his contract.

The original contract is now on file at the office of the Second Comptroller of the Treasury, with a bond attached, whereby the contractor, as principal, and Messrs. John Coyle and C. H. Snow, of this city, as sureties, are held and bound unto the United States in the penal sum of fourteen thousand dollars for the faithful performance of the obligations of the contract. They have been notified of the failure of their principal, and it is respectfully suggested that the Second Comptroller, or other proper officer of the Government, be requested to institute the proper measures for enforcing the bond.

General Ramsay has been directed to take such measures for having the work done as may be most advisable and advantageous for the public interest.

Respectfully, your obedient servant,

A. B. DYER,
Brevet Major-General Chief of Ordnance.

General U. S. GRANT,
Secretary of War ad interim.

[See the intervening correspondence hereto appended.]

Respectfully returned to the Chief of Ordnance to report if there has been any change in the condition of this case since the date of this recommendation.

By order of the Secretary of War.

L. H. PELOUZE,
Assistant Adjutant-General.

JUNE 17, 1868.

ORDNANCE OFFICE, June 25, 1868.

Respectfully returned to the Secretary of War. Since the date of the within letter, the work contracted to be done by Mr. Stockbridge has been completed by the United States at the cost \$10,021.77, which is \$2,521.77 more than it would have cost the United States if the contract had been faithfully executed by Mr. Stockbridge. This excess of cost should be paid to the United States by Mr. Stockbridge or his sureties.

A. B. DYER,
Brevet Major-General, Chief of Ordnance.

WAR DEPARTMENT, BUREAU OF MILITARY JUSTICE,
June 27, 1868.

Respectfully returned. The recommendation of the Chief of Ordnance, that suit be commenced on this bond, is concurred in.

J. HOLT,
Judge Advocate-General.

Approved by the Secretary of War, July 1, 1868.

ED. SCHRIVER,
Inspector-General.

ORDNANCE OFFICE, WAR DEPARTMENT,
Washington, June 18, 1868.

SIR: I inclose herewith a letter from yourself to this Bureau, and one from this Bureau submitting it to the Secretary of War, in relation to the failure of Mr. J. T. Stockbridge to fulfill his contract for taking down the old penitentiary; and request that you will give me the information called for by the Secretary of War, by indorsement on the papers of 17th instant.

Respectfully, your obedient servant,

A. B. DYER,
Brevet Major-General, Chief of Ordnance.

Brevet Major-General G. D. RAMSAY,
Commanding Washington Arsenal.

WASHINGTON ARSENAL,
Washington, D. C., June 20, 1868.

SIR: In reply to your letter of the 18th instant, transmitting the indorsement of the honorable Secretary of War, I have the honor to report that in the case of Stockbridge and others, the only "change in the condition of this case," since the date of my letter to you of the 7th January, ultimo, has been the prosecution of the work by me, of taking down the penitentiary buildings, and which the contractor, Stockbridge, failed to accomplish, and much to the detriment of the United States. The circumstances connected with the contract of J. T. Stockbridge were particularly aggravating; he was unreliable in every respect, deceived his work people, and ultimately went off without paying them.

The papers sent to me are herewith returned.

Very respectfully,

GEO. D. RAMSAY,
Brevet Major-General.

Brigadier Major-General A. B. DYER,
Chief of Ordnance

WASHINGTON ARSENAL,
Washington, D. C., June 24, 1868.

SIR: The specifications for taking down the penitentiary buildings, &c., were:
1st. All the buildings and the walls heretofore constituting the penitentiary of the

District of Columbia, are to be taken down, with the exception of the houses on the east and west fronts.

2d. All the materials constituting said buildings and walls, viz, slate, stone, brick, iron-work, wood-work, including roofing, doors, window-frames, water-gutters, and spouts, foundation stone, pavements, lightning-rods, &c., are to be removed to a designated locality, and each separately and according to its kind piled in a compact manner.

3d. Before being piled the bricks and bats are to be cleaned in a manner suitable for building purposes.

For the faithful performance of the foregoing work, J. T. Stockbridge entered into a contract with the United States and in the sum of \$7,500, he being the lowest responsible bidder under proposals duly issued by me. The work to be commenced on the 7th October, 1867, and to be completed in ninety days. After the most aggravating delay and entire disregard to the spirit of the contract, Stockbridge formally relinquished the work on the 28th November, 1867, and, at the time, it was estimated by officials of the arsenal that the work done by him, viz, taking up, in part, pavements, tearing down walls and outbuildings, and removing some of the material, would not in value exceed \$500.

As the fulfillment of the contract embraced ninety days, I could not myself commence operations until the 23d January, 1868, mid-winter, and consequently had thereby to incur the greater expense from the shortness of the days and the unusual inclemency of the weather.

My estimate for carrying on the work was \$10,140.31. The actual cost under the specifications of the contract is just \$10,021.77, less than the estimate \$118.54.

The account will thus stand:

Expenditure on the part of the United States.....	\$10,021 77
Stockbridge contract	\$7,500
Stockbridge expenditure.....	500
	8,000 00
Actual loss to the United States.....	2,021 77

The foregoing statement is respectfully submitted in reply to your letter of the 22d instant.

Very respectfully,

GEO. D. RAMSAY,
Brevet Major-General.

General A. B. DYER,
Chief of Ordnance.

The work was commenced by me on the 23d January, 1868.

G. D. R.

WASHINGTON ARSENAL,
Washington, D. C., June 25, 1868.

SIR: My attention has just been called to the fact that in my letter to you of yesterday I omitted to state that no moneys were paid to Stockbridge on the part of the United States.

Very respectfully,

GEO. D. RAMSAY,
Brevet Major-General, Commanding.

Major-General A. B. DYER,
Chief of Ordnance.

H. Ex. 163—2

MONTANA INDIAN WAR CLAIMS.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The Montana Indian war claims of 1867.

JANUARY 31, 1873.—Referred to the Committee on Military Affairs and ordered to be Printed.

WAR DEPARTMENT, *January 28, 1873.*

The Secretary of War has the honor to submit to the House of Representatives certain additional papers pertaining to the investigation directed by Congress in section 10 of the act of July 15, 1870, into the Montana Indian war claims of 1867. These papers are submitted for file and consideration with other papers in the case heretofore transmitted to Congress, on the 4th of February, 1871, March 15th, 1872, and the 21st May, 1872.

WM. W. BELKNAP,
Secretary of War.

WASHINGTON, D. C., *January 28, 1873.*

SIR: I have the honor to submit to you, with reference to their transmission to the House of Representatives, certain claims pertaining to the Montana Indian war claims of 1867, which were reported last session of Congress by me as not having been presented for new consideration since the destruction of the papers in these claims in the Chicago fire of October 9, 1871, as follows:

1. John H. Ming, for stationery, September 30, 1867	\$100 50
2. John H. Ming, for stationery, May 12, 1867	119 38
3. John H. Ming, for stationery, September 23, 1867	662 55
4. John H. Ming, for stationery, September 12, 1867	63 00
5. John H. Ming, for stationery, October 5, 1867	78 00
6. John H. Ming, for quartermaster stores, August 5, 1867	200 00
7. John H. Ming, for quartermaster stores, September 1, 1867	200 00
8. Medrick Prévost, for clerical services in quartermaster's department ...	105 00
9. H. Siegel & Co., for clothing, furnished August 15, 1867	608 00
10. A. Hananer, for forage, furnished June 8, 1867	560 00
11. W. F. Sanders, for rent of buildings	1, 125 00
12. Frank Cleaveland, for commissary supplies, September 1, 1867	666 00
13. Frank Cleaveland, for commissary supplies, July 1, 1867	523 08

14. L. M. Black, for forage, September 1, 1867.....	\$3,480 00
15. L. M. Black, for forage, June 4, 1867.....	493 00
16. L. M. Black, for forage, June 1, 1867.....	374 97
17. L. M. Black, for forage, June 4, 1867.....	5,220 00
18. L. M. Black, for forage, August 31, 1867.....	6,499 50
19. L. M. Black, for forage, June 4, 1867.....	507 50
20. L. M. Black, assignee of W. W. Watkins, for forage, August 1, 1867.....	1,000 50
21. L. M. Black, assignee of W. W. Watkins, for forage, August 1, 1867.....	2,093 57½
22. Hugh Kirkendall, for service of teams.....	11,700 00
23. W. R. Gibson, for services as teamster.....	375 00
24. Charles R. Stuart, for horses and mules, July 11, 1867.....	1,600 00
25. W. S. Scribner, for supplies, June 19, 1867.....	6,567 10
26. J. W. Alley, agent, for quartermaster stores, June 18, 1867.....	408 00
27. J. M. Castner for rent of buildings, September 30, 1867.....	1,025 00
28. Daniel Henry, for subsistence stores, July 13, 1867.....	1,836 33
29. Edward O'Connell, for one horse.....	200 00
30. A. J. and R. W. Lindsay, assignees of Thomas J. Brawner, for services as teamster.....	47 50
31. Medrick Prévost, for clerical services in quartermaster's department...	150 00
32. W. Z. Thompson, for services as teamster.....	60 00
33. J. P. Bruce, for one horse, July 1, 1867.....	207 00
34. J. C. Irving, for clerical services, December 5, 1867.....	600 00
35. John Brunette, for commissary supplies, September 20, 1867.....	195 00
36. John Brunette, for supplies, May 30, 1867.....	111 25
37. E. W. Carpenter, for supplies, September 20, 1867.....	228 00
38. W. W. Watkins, for forage, September 1, 1867.....	2,000 13
39. J. M. Gallaher, for ferriage.....	412 00
40. Edward Owen, for ordnance and quartermaster stores.....	2,834 40
41. F. R. Merk.	
42. Couch and Drew.	

These cases have all been acted upon by me, and the report of the examination in each case will be found indorsed thereon.

Very respectfully, your obedient servant,

JAS. A. HARDIE,
Inspector-General.

The Hon. SECRETARY OF WAR.

COUNCIL BLUFFS, IOWA, June 8, 1872.

SIR: I have in my hands a voucher of the Montana Indian war claim, 1867. It belongs to the First M. E. Church of this city. I see by section 10 of act of July 10, 1870, that the subject was referred to the Secretary of War for report. I have been informed by Washington telegrams that the President has approved a bill appropriating money to pay expense of Indian war of Montana, 1867. Be kind enough to inform me as to the precise action.

Yours, respectfully,

JOHN H. KEATLEY.

General W. W. BELKNAP,
Secretary of War.

COUNCIL BLUFFS, IOWA, June 21, 1872.

SIR: In response to yours of the 17th instant, I have the honor to inclose to you the voucher mentioned in the same, with affidavits of proof of ownership. After you have taken copy, as suggested, please return voucher to me by mail.

Respectfully, &c.,

JOHN H. KEATLEY.

General JAMES A. HARDIE,
Inspector-General Military Division of the Missouri.

LEANDER M. BLACK.

(Signed in duplicate.)

STATE OF IOWA, *Pottawattamie County*, ss:

I, John H. Keatley, being first duly sworn, on oath say that I am of lawful age; that I am a resident of Council Bluffs, Iowa; that there is now in my hands a voucher for \$374.97, on blank No. 12, dated June 1, 1867, in what is commonly known as the Montana war claims, issued by the territorial authorities to pay the expenses of suppressing Indian hostilities in Montana Territory during the year 1867; that said voucher is signed in duplicate by H. Cummings, colonel and quartermaster-general, and approved by Green Clay Smith, governor and commander-in-chief; that said voucher was drawn in favor of Leander M. Black; that said voucher is now the property of the First M. E. Church of Council Bluffs, Iowa.

JOHN H. KEATLEY.

Sworn to before me, and subscribed in my presence by the said John H. Keatley, this 21st day of June, 1872.

[SEAL.]

J. W. ROBINSON,
Clerk of District Court of Pottawattamie County, Iowa.

STATE OF IOWA, *County of Pottawattomie*, ss:

I, N. J. Bond, being first duly sworn, on oath say that I am of lawful age; that I was the true owner of voucher on blank No. 12, dated June 1, 1867, for \$374.97, given by the authorities of Montana Territory to Leander M. Black for quartermaster's stores used by said authorities in the suppression of Indian hostilities in said Territory in the year 1867, said voucher having been signed in duplicate and approved by Governor Green Clay Smith, governor of Montana Territory, for the quarter ending on the 30th day of June, A. D. 1867; that for value received the said voucher was transferred to me by the said Leander M. Black; that being the owner of the said voucher I transferred and delivered the same to the First M. E. Church of Council Bluffs, Iowa, to whom it now belongs, and who are the true owners of the same.

N. J. BOND.

Subscribed and sworn to before me by the said N. J. Bond, this 20th day of June, A. D. 1872.

[SEAL.]

J. LYMAN,
Notary Public.

WASHINGTON, D. C., January 11, 1873.

ELLIOTT, BLAKESLEE & NOYES, FINE ART STORE,
(OLD STAND OF A. A. CHILDS & CO.,)
127 Tremont Street, Boston, May 21, 1872.

DEAR SIR: Your favor of 11th ultimo was laid aside, and has just turned up again. I have been away much of the time and so neglected it. I inclose you voucher for my claim. Mr. Carpenter was my agent in Montana, and, as you see, has receipted for the money at the bottom of the bill. I do not see how I can help the matter by my power of attorney, for the claim was in his name.

The goods were a patent combination mess-kit, and not the common Army mess-pan and kettle. They cost me, I believe, (I am not now sure, it was so long ago,) \$5 each to make, and he sold them to the Government at \$3 each, to close them out, and afford necessary supplies for the troops. I ought to have the money, and hope you will get it for me. If I can help you any by affidavit, or by power of attorney, please make out same, or send me word and I will attend to it at once.

Respectfully, yours, &c.,

E. BLAKESLEE.

Mr. FULLER.

WASHINGTON, D. C., May 23, 1872.

SIR: The within inclosed voucher, in duplicate, was received by me to-day, from Brevet Brigadier-General Erastus Blakeslee, late colonel of Connecticut cavalry, claiming to be the owner of it, and that Mr. Carpenter, who has receipted it, was his agent and that he was the owner of the mess-kits.

I file the claim with you, to be embraced in any supplemental report that may hereafter be made of outstanding vouchers, of which I am informed there is a large amount.

Very respectfully,

T. J. D. FULLER,
For Erastus Blakeslee.

The Hon. SECRETARY OF WAR.

[Indorsement.]

Respectfully referred to Inspector-General J. A. Hardie.
By order of the Secretary of War.

JOHN POTTS,
Chief Clerk, War Department.

MAY 27, 1872.

W. W. WATKINS.

(Signed in duplicate.)

[Indorsement.]

The undersigned, after investigation, reports as follows:

W. W. Watkins informed the undersigned that he did not furnish any hay upon the group of vouchers assigned to him, other than upon three vouchers for about \$3,000, which were in his possession about a year ago.

No award can be made upon any vouchers of the group, save the three in question, which have not been re-presented since the fire at Chicago of October 9, 1871.

If this voucher be, however, one of the three held by Watkins, a fact which may possibly be proven, the claim may be disposed of by allowing an award to the legal owner of the voucher, for the amount of forage charged for, (for the undersigned satisfied himself that Watkins furnished the amount those three vouchers represent,) at the same price that was allowed on the vouchers of Black and others, reported on in previous reports.

JAS. A. HARDIE,
Inspector General.

JOS. A. HYDE.

MONTANA TERRITORY, *Lewis and Clarke County*:

James M. Gallaher, being first duly sworn, deposes and says that the foregoing account of his against the militia of Montana Territory, organized under and by virtue of a proclamation of the governor of Montana Territory, dated — day of —, A. D. 1867, was contracted by said militia between the months of April and December, A. D. 1867; that he rendered a bill of the same to the then acting quartermaster of said militia, one Cummings, (whose first name is unknown to this affiant,) who issued to this affiant a voucher therefor; that the amount charged said militia was not unreasonable, being exactly the same that he charged other persons; that at the time said bill was contracted, United States currency in this Montana Territory was only worth and only passed for 80 cents on the dollar, gold being the basis upon which every person transacted their business and based their contracts; that he added the difference between currency and gold to said bill to conform to the basis of contracts to this Territory; that on or about the month of July, A. D. 1870, this affiant conveyed the voucher above mentioned, for a valuable consideration, to Messrs. Clarke, Conrad & Miller, of Helena, Lewis and Clarke County, Montana Territory; and further this affiant saith not.

JAMES M. GALLAHER.

Subscribed and sworn to before me this July 12, 1872.

[SEAL.]

HENRY ADDOMS,
*Notary Public.*MONTANA TERRITORY, *Lewis and Clarke County*:

Thomas Conrad, being first duly sworn, says that he is one of the members of the firm of Clarke, Conrad & Miller; that in or about the month of July, A. D. 1870, one James M. Gallaher, of Gallatin County, Montana Territory, conveyed to said firm a certain voucher, (the number of which is unknown to this affiant,) known as the "Montana militia voucher," for the sum of \$412; that said firm, some time during the year 1871, gave said voucher into the hands of one Inspector-General J. A. Hardie, of the United States Army, for examination and inspection; and, as this affiant is informed and believes, said Hardie carried said voucher with him to the city of Chicago, State of Illinois, his headquarters; and that the same was burned up in said city on or about October the 9th, A. D. 1872; and further this affiant saith not.

THOMAS CONRAD.

Subscribed and sworn to before me this July 12, 1872.

[SEAL.]

HENRY ADDOMS,
Notary Public.

[Indorsement.]

The undersigned has ascertained that the services have been rendered as claimed. The same rate of ferriage should be allowed as have been allowed in the awards of similar previous cases. The award should be made payable to F. B. Miller.

JAS. A. HARDIE,
*Inspector-General.*WASHINGTON, D. C., *January 11, 1873.*

HEADQUARTERS MILITARY DIVISION OF THE MISSOURI,
INSPECTOR-GENERAL'S OFFICE,
No. 560 Wabash Avenue, Chicago, Illinois, February 5, 1872.

SIR: At one time it appears that you were a claimant for any awards that might be found due on certain Montana Indian war vouchers, issued in the name of Edward Owens. If the original vouchers were in my possession at the time of the late fire in this city, they have been destroyed, but if you still hold them or have the means of restating your case, please do so by furnishing me with an affidavit setting forth your ownership of the vouchers and how you acquired possession of them, accompanied by copies of the vouchers.

If you have disposed of them, please state to whom, and, if possible, get the present owner to file his papers without delay, as required by inclosed circular from the War Department.

Very respectfully,

JAS. A. HARDIE,
*Inspector-General.*LEWIS NEWSOM, Esq.,
Gallipolis, Ohio.

WAR DEPARTMENT, *Washington City, October 30, 1871.*

All persons holding or claiming to own vouchers pertaining to the Montana Indian war claims of 1867, or claiming awards to be found due thereon, are requested to send forward copies of such vouchers, or statements of their claims in detail, with affidavits as to the fact of ownership, to Inspector-General James A. Hardie, United States Army, Chicago, Illinois.

Notwithstanding the destruction of the list of awards, nearly completed, and of important evidence pertaining to the claims, sufficient data exists upon which to frame a new list of awards without injurious delay.

By order of the Secretary of War.

JOHN POTTS,
Chief Clerk War Department.

No. 40.

Voucher No. 12.

HEADQUARTERS TERRITORIAL VOLUNTEERS, VIRGINIA CITY, MONTANA TERRITORY.

The United States to Edward Owens, Dr.

1867.

June 11. 13 serviceable guns, at \$45 each	\$585 00
5 revolvers, at \$30 each	150 00

JAS. A. HARDIE,
Inspector-General.

WASHINGTON, D. C., *January 11, 1873.*STATE OF OHIO, *Gallia County, ss :*

I, Edward Owen, now a citizen of the county of Gallia, and State aforesaid, on my
 oath say, that in the spring of the year A. D. 1866, I went to the Territory of Montana
 and remained there until in the month of October, A. D. 1867, when I returned to said
 State of Ohio, where I remained until on or about the month of August, A. D. 1870,
 when I went to the State of Missouri, and remained there until the month of May, A.
 D. 1872, when I returned to Gallia County, Ohio, where I now reside, with my post-
 office address at Pine Grove, Gallia County, Ohio.

I further state that during my stay in the said Territory of Montana, Indian hostili-
 ties existed in said Territory to such an extent that the governor of said Territory called
 out the militia for the purpose of suppressing the same; during which time the said
 troops were engaged in said service, I furnished divers articles of quartermaster's
 stores, ordnance supplies, and done divers labors, during said hostilities, under the order
 of the governor of said Territory of Montana, and was to be paid for the same the full
 sum of \$2,834.40, and for which I received the four following vouchers, in dupli-
 cate form, as will more fully appear by reference to a list here given of them and their
 amounts; and the said vouchers herewith filed, issued and signed by H. Cummings,
 quartermaster-general, and approved by Governor Green Clay Smith, commander-in-
 chief, viz :

Voucher number 12, dated June 11, 1867	\$796 40
Voucher number 12, dated September 3, 1867	415 00
Voucher number 22, dated September 30, 1867	675 00
Voucher number 22, dated July 1, 1867	948 00

Amount due..... 2,834 40
 which said amount of \$2,834.40 is just and correct, and due to me on account of the
 said supplies furnished and labor done and performed by me, and which remains un-
 paid and to me belonging.

I further state that I have not received any other horse or horses, or guns, or revolv-
 ers, or ammunition, or any other Government property, for the whole of said claim,

or any part thereof, or any pay or compensation for said amount, or any part thereof, from any officer of said Territory, or of the United States Government, or any person therefor; nor have I sold, bartered, or given away the said claim, or any part of same, but to me the same wholly belongs.

I make this declaration in compliance with circular herewith filed and headed "War Department, Washington City, October 30, A. D. 1871," by order of the Secretary of War; (signed) John Potts, chief clerk War Department, that my said claim may receive favorable consideration and that I may be paid the said sum of \$2,834.40.

I further state that my said claim was by me once placed in the hands of one Lewis Newsom, esq., of Gallipolis, Ohio, for collection, and which remained in his hands until he departed this life, and to whom the accompanying letter was addressed February 5, 1872, written at Chicago.

That I hereby constitute and appoint Charles Mallohan, of Gallipolis, Ohio, my true and lawful attorney, to present and prosecute the above-described claim to completion; to receive any certificate, warrant, check, draft, or order that may issue in payment of said claim; to sign my name thereon, and to collect the same, all which acts, and doing in and about the said claim I will forever warrant, ratify, and approve. That my age is thirty-four years, and post-office address is Pine Grove, Gallia County, Ohio. That I have not been engaged in the rebellion of the United States in the war of 1861, against the Government thereof, nor in any other hostility or disloyalty to the Government of the United States, and still is a loyal citizen thereof.

I further direct all correspondence in and about said claim to be sent to my said attorney, Charles Mallohan, of said Gallipolis, Ohio.

EDWARD OWEN.

Attest:

IRA W. BOOTON.

C. W. WHITE.

On this 12th day of June, A. D. 1872, personally came before me, Henry A. Kent, a probate judge in and for Gallia County, Ohio, Ira W. Booton and C. W. White, persons known to me to be respectable and entitled to credit, who are citizens of the said county and State, with their post-office address at Gallipolis, Ohio; who, being by me duly sworn, upon their oath jointly say that they were present and saw Edward Owen sign his name to the foregoing statement, and that they are personally acquainted with him and know he is the person he represents himself to be in his foregoing declaration, which has been read and explained to them before signing the same; but of the correctness of the said claim as set up by the said Edward Owen, they cannot state.

They further say that they have no interest in this claim, direct or indirect, this 12th day of June, A. D. 1872.

IRA W. BOOTON.
C. W. WHITE.

The foregoing declaration was sworn to; the power of attorney therewith written was also acknowledged and subscribed by the claimant, Edward Owen; and the witnesses, Ira W. Booton and C. W. White, above named, also subscribed and were sworn to their joint affidavit, by me, after the said declaration and affidavit were fully read and explained to declarant and affiants; and I have no interest in this claim, direct or indirect.

Witness my hand and official seal this 12th day of June, A. D. 1872.

[SEAL.]

H. A. KENT, *Probate Judge.*

No. 41.

VIRGINIA CITY, MONTANA, *March 5, 1872.*

DEAR SIR: I this day received your letter of January 20, being about forty-three days on the road. The copies of vouchers which you request I have already forwarded to your address at Chicago, on January 25, and I trust that you have received same in due time. I also sent along with same the required proofs, &c.

In regard to vouchers burned, which I had deposited with William Blair & Co., and they certified that same were their property, as forfeited collateral security, I think that my affidavit, sent to you January 25, will cover sufficient proof that such is not the case, although I do not remember clearly that my testimony referred much to the particular point of ownership; at any rate, I can give all the proof necessary that same were and are mine, and I think when they receive my letter, which I wrote to to them this day, that they will not delay to correct same before you, and release their pretended claims on same, which was really surprising to me when I heard of same, to say the least of it, especially coming from a house like William Blair & Co. I

inclose you their letter, which will show you that they never made such claim to me
 I inclose herewith affidavit as to mule purchase, which is of my best recollection.
 Anything farther I can do in reference to my vouchers, including the Hanauer
 voucher, I shall promptly attend to at your command.

Yours, very respectfully,

F. R. MERK.

General JAMES A. HARDIE,
Inspector-General, United States Army.

WILLIAM BLAIR & CO., 30 AND 32 SOUTH CANAL STREET,
 BETWEEN RANDOLPH AND WASHINGTON,
Chicago, January 10, 1872.

DEAR SIR: In reply to yours of 23d ultimo, would say that we have this day sent our
 affidavit of the destruction of your vouchers to General James A. Hardie, Washington
 City.

The document, we trust, was drawn sufficiently full and explicit as to meet the re-
 quirements of the case. Hoping you may obtain the full amount of your claim, and
 buy a large cash bill of us in the spring,

We are yours, truly,

WM. BLAIR & CO.

Mr. F. R. MERK.

TERRITORY OF MONTANA, *Madison County, ss:*

Frederick R. Merk, of Virginia City, county and Territory aforesaid, being duly sworn,
 upon his oath says that, some time during the fall of 1867 deponent saw upon the street,
 in said Virginia City, a wagon with (as deponent remembers) four mules, for sale by
 auction; that deponent was informed that they were offered for sale by order of Colonel
 H. Cummings; that deponent bid upon the same at said sale, and bought the same in
 for about \$350; that thereafter, Colonel Cummings, or some person for him, demanded
 the amount so bid; that deponent refused to take the wagon and team unless the amount
 due deponent from said H. Cummings was allowed and credited on the amount; that
 after some conversation said indebtedness was allowed and credited by said Cum-
 mings or his agent, and deponent paid the balance. The mules were worn out and in
 very poor condition, and two of them died very shortly afterward.

F. R. MERK.

Subscribed and sworn to before me this 5th day of March, 1872.

F. C. DEIMLING,
Notary Public.

VIRGINIA CITY, MONTANA, *November 30, 1872.*

DEAR SIR: In your report to the Government relative to Montana war claims, I no-
 ticed that vouchers Nos. 182, 299, and 300 were allotted by you to lawful owner, and as
 I am the legal and just owner and holder of same, I am desirous to satisfy you or the
 Department to that effect, so as to remove all possible delay or suspense in settling my
 controversy, if there should be any, after Government should have ordered payment of
 vouchers. Voucher No. 182 was held by me as security, and afterward was purchased
 by me, and is now in my possession. Vouchers 299 and 300 were left by me with Wil-
 liam Blair & Co., of Chicago, as security, and said vouchers were destroyed in the
 great fire of that city, to which William Blair & Co. made affidavit to you. William
 Blair & Co. have also advised me in their letter of June 29, that they had written to
 you, informing you that they released all claims against said vouchers.

Now, will you please advise me if any counter claims are filed with you, and still ex-
 ist, and as to what I am further required to do to make payment come direct to me.

Yours, very respectfully,

F. R. MERK.

JAMES A. HARDIE,
Inspector-General, United States Army.

Inspector-General.

WASHINGTON, *January 13, 1873.*

SURVEY OF BEAR CREEK HARBOR, LAKE ONTARIO.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The survey of the harbor of Bear Creek, Lake Ontario.

JANUARY 31, 1873.—Referred to the Committee on Commerce and ordered to be printed.

WAR DEPARTMENT, *January 30, 1873.*

The Secretary of War has the honor to transmit to the House of Representatives, in accordance with its resolution of the 23d instant, a copy of the report, dated October 28, 1872, of Major J. M. Wilson, of the Corps of Engineers, on the survey of the harbor of Bear Creek, Lake Ontario, with the letter of the Chief of Engineers, transmitting the same, with his remarks.

WM. W. BELKNAP,
Secretary of War.

OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D. C., January 29, 1873.

SIR: In compliance with the following resolution of the House of Representatives of January 23, 1873, "That the Secretary of War be requested to transmit to this House a copy of the report of the engineers of the survey recently made of the harbor of Bear Creek, Lake Ontario," I beg leave to transmit herewith a copy of the report of Major J. M. Wilson, of the Corps of Engineers, on the survey referred to, dated October 28, 1872.

An artificial harbor of limited extent has been made at the mouth of Bear Creek by private enterprise, which is used almost exclusively by two iron companies for the shipment of iron and the receipt of coal and lime. For general purposes of commerce, and for shelter, the harbor would require to be enlarged to a width of at least 200 feet, with piers projecting into the lake to 12 feet water, and the space between the piers at the mouth of the creek excavated to the requisite depth. The cost of such a harbor, based upon the prices now being paid by the Govern-

ment for similar work on Lake Ontario, is estimated by the officer in charge of this examination, Major Wilson, at \$250,000.

Very respectfully, your obedient servant,

A. A. HUMPHREYS,

Brigadier-General and Chief of Engineers.

Hon. W. W. BELKNAP,

Secretary of War.

UNITED STATES ENGINEER OFFICE,

Oswego, New York, October 28, 1872.

GENERAL: I have the honor to forward the accompanying map and report of a survey of the harbor at Bear Creek, Lake Ontario, made under my direction, in accordance with the act of Congress, approved June 10, 1872.

Bear Creek is a small stream emptying into Lake Ontario, about twenty miles east of the mouth of the Genesee River. The harbor at present is very limited in extent, the width between the piers at the entrance being only about 60 feet, and is used almost exclusively by the Wayne County Mining Company and the Ontario Furnace Company, who ship large quantities of iron-ore and iron and receive large amounts of coal and limestone. The other business there at present seems to be insignificant in the extreme; in fact, the deputy collector of the port of Bear Creek, when requested by me to furnish a report of the revenue and commerce during the last fiscal year, stated in his reply that the report sent me was as near as he was able to make it, from the figures that he could obtain from the agents of the two companies doing business there. The natural advantages for a harbor are exceedingly limited; the location, however, is favorable for the development of the large iron-ore beds in the vicinity.

The plan of improvement of this harbor consists, as shown on the accompanying map, of prolonging the present west pier out to 12 feet water, building an east pier parallel to and 200 feet from it, removing the present east pier and excavating the rock from between the piers and in the creek to a depth of 12 feet at low water. The cost of the entire improvement will be \$250,000.

Bear Creek is in the collection district of Genesee. The nearest port of entry is Pultneyville, four miles east, where the United States is now engaged constructing a harbor. The nearest light-house is at Big Sodus, fifteen miles distant, and Fort Ontario, forty-three miles distant, is the nearest work of defense.

The revenue collected during the fiscal year ended June 30, 1872, was \$79.80. The number of vessels entering and clearing during the year was 159, with an aggregate tonnage of 39,750 tons. These vessels were as follows: 75 schooners, 81 canal-boats, 2 steam-barges, and 1 bark. Every two canal-boats were brought in by one tug.

The imports during the same period were as follows: 10,865 tons of coal; 2,820 tons of limestone; 2,529 tons of iron ore; 130 barrels of salt; 9,000 feet, board measure, of lumber. The value of the imports was \$95,798.

The exports for the fiscal year were as follows: 16,340 tons of iron ore; 6,000 tons of iron; 100 barrels of apples. The value of the exports was \$289,170.

The present piers were built by a company, and are constructed of timber, of a smaller size than I deem necessary to successfully withstand

the gales of Lake Ontario for any long period of time. To prevent any claim for damages for the removal of the east pier before the General Government undertakes any operations at this place, these piers should be turned over to the United States, or at least all claims for damages should be waived.

The prices for labor and materials given in the estimate in the accompanying report are about the same that the General Government is now paying for pier-work at the other harbors on Lake Ontario.

I am, general, very respectfully, your obedient servant,

JOHN M. WILSON,

Major of Engineers, United States Army.

Brigadier-General A. A. HUMPHREYS,

Chief of Engineers United States Army.

FORT NIAGARA,

Youngstown, New York, October 16, 1872.

MAJOR: I have the honor to submit the following report of my survey of Bear Creek Harbor, Lake Ontario, New York, together with a map of the harbor, and an estimate for its improvement, made in accordance with your instructions of July 23, 1872.

Bear Creek is a small stream, or run, about eight miles long, entering the lake at a point twenty miles east of Genesee River; it has no natural facilities or advantages as a harbor, being narrow at its mouth, shallow, and having a solid rock bed. The land along its margin, as well as along the lake shore, is from 10 to 15 feet above the lake, with occasional elevations of 20 to 30 feet. There are four grist-mills on its banks, usually in operation during the spring and fall, but at this time are doing nothing for want of water.

Extensive beds of red hematite-iron ore exist in Wayne County, within two or three miles of the lake, and some of them are worked in the neighborhood of Bear Creek by the Wayne County Mining Company, who have, for the improvement of their business, constructed a harbor of limited capacity at the mouth of the creek at an expenditure of \$47,000.

The Ontario Iron Furnace Company also uses the harbor for the reception of iron-ore, limestone, and coal, having, I am informed, a contract with the Harbor Company for the use of the eastern portion of it. The iron-ore is shipped to Buffalo, Albany, Syracuse, Cold Spring, on the Hudson, Geddes, Charlotte, New York; Erie, Pennsylvania; Cleveland, Ohio; and Hamilton, Ontario.

There are, at the harbor, one store, one grist-mill, and eleven houses, and at the furnace, two miles south, one store, two blacksmith-shops, and one hundred houses. The population near the harbor is small, it being only three years since it was opened for business. From fifty to sixty men are employed loading and unloading vessels. The blast-furnace makes 600 tons of pig-iron per month, and employs upward of fifty men. Six ore-beds are in full working order, and employ upwards of two hundred men, and about one hundred teams are employed hauling ore, limestone, and coal.

The Wayne County Mining Company state that they have shipped 22,800 tons of ore during the last fiscal year, and claim that if they had greater facilities for shipping they could now contract for 50,000 tons for the upper lake region, and 20,000 tons for the eastern market, but cannot fill the orders for want of harbor accommodations.

I surveyed the lake-shore line 2,200 feet east, and 2,600 feet west of the mouth of the creek, and established a line of buoys in 15 feet water. I then took soundings from stations on shore to the buoys, from the buoys to the mouth of the harbor, and along the line of buoys from east to west. I then surveyed the harbor and that portion of the creek which has been improved, a distance of 1,000 feet to the bridge, at which point there is no water, and the bed of the creek is solid rock. The survey was continued 500 feet farther along the bed of the creek, to a grist-mill, which is not now in operation for the want of water.

The soundings were taken to feet and quarter feet in the lake, the harbor, and the creek.

The water in the lake being very clear, I was able to see bottom, and found it all rock, large areas of it being smooth and unbroken, and when the strata were broken up, nothing but loose rock was visible. Considerable delay was occasioned, by the high winds, in taking the soundings, but in other respects the weather was favorable for our work. In the map of the harbor, herewith submitted, the soundings are reduced to the zero of the Oswego gauge.

The harbor had an average depth of water on the 20th of August of 6 feet 8 inches, or 5 feet 8 inches below zero. From two to two and a half feet of rock have been taken out by dredging, and it is supposed that but little more can be removed in that manner, either within the harbor, or over the area proposed to be inclosed by the new piers, (in case it should be determined to enlarge and improve the harbor.)

To reach the 12-foot curve there will be required an extension of the west pier of 570 feet, and an entire new pier of 870 feet on the east side, and to obtain a depth of water 12 feet below zero it will be necessary to remove, by blasting or other means, 32,133 cubic feet of solid rock.

Estimate of the cost of one crib, 30 feet by 20 feet by 10 feet, and superstructure 30 feet by 20 feet by 5 feet.

10 sticks hemlock, 12" x 12", 30' long, for bottom,	3,600 feet, board measure.	
10 sticks hemlock, 12" x 12", 20' long, for bottom,	2,400 feet, board measure.	
18 sticks hemlock, 12" x 12", 30' long, for crib...	6,480 feet, board measure.	
22 sticks hemlock, 12" x 12", 20' long, for crib...	5,280 feet, board measure.	
3-inch hemlock plank	1,100 feet, board measure.	
Total	18,860 feet, b. m., at \$22...	\$414 92

Superstructure.

15 sticks white pine, 12" x 12", 30' long.....	5,400 feet, board measure.	
15 sticks white pine, 12" x 12", 20' long.....	3,600 feet, board measure.	
60 linear feet white pine joists, 6" x 8".....	240 feet, board measure.	
3-inch white pine plank	1,400 feet, board measure.	
Total	10,640 feet, b. m., at \$30...	319 20

26 screw-bolts, 37" x 1½", with two washers, 400 pounds, at 9 cents.....	36 00
300 drift-bolts, 30" x 1½", 2,475 pounds, at 7 cents.....	173 25
7-inch wrought spikes, 80 pounds, at 8 cents.....	6 40
Stone in crib and superstructure, 40.375 cords, at \$7.....	282 62
Framing and building 29,500 feet timber and plank, at \$8.....	236 00
2,955 pounds iron bolts and spikes put into work, at 1 cent.....	29 55
Superintendence on each 30 linear feet.....	71 25
Total	1,569 19

Estimate of the cost of one crib and superstructure 30 feet by 20 feet by 7 feet.

21 sticks white pine, 30' x 1' x 1'	7,560 feet, board measure.	
22 sticks white pine, 20' x 1' x 1'	5,280 feet, board measure.	
3-inch white-pine plank	1,400 feet, board measure.	
6" x 8" white-pine joists	240 feet, board measure.	
Total	14,480 feet, b. m., at \$30...	\$434 40

3-inch hemlock plank, 1,100 feet, board measure, at \$18	19 80
26 screw-bolts, 37" x 1 1/4", 400 pounds, at 9 cents	36 00
124 drift-bolts, 30" x 1 1/8", 1,023 pounds, at 7 cents	71 61
7-inch wrought spikes, 80 pounds, at 8 cents	6 40
Stone in crib and superstructure, 11 cords, at \$7	77 00
Framing and building, 15,600 feet, board measure, at \$8	124 80
1,503 pounds of iron put into work, at 1 cent	15 03
Superintendence on each 30 linear feet	38 00
Total	823 04

Cost of improving the harbor.

41 cribs and superstructure, 30' x 20' x 15', at \$1,569.19	\$64,336 79
7 cribs and superstructure, 30' x 20' x 7', at \$823.04	5,761 28
32,133 cubic yards of solid rock excavation, at \$4.85	155,845 05
Removing 230 feet of east pier	1,495 00
	227,438 12
Ten per cent. for contingencies	22,743 81
Total	250,181 93

Respectfully submitted.

JAMES S. LAWRENCE,
Assistant Engineer.

Major JOHN M. WILSON,
Corps of Engineers, U. S. A.

FROM THE

GEOLOGICAL SURVEY OF THE TERRITORIES.

LETTER

FROM THE

ACTING SECRETARY OF THE INTERIOR,

RELATIVE TO

An appropriation required for the continuation of the geological survey of the Territories of the United States, under the directions of his Department.

JANUARY 31, 1873.—Referred to the Committee on Appropriations and ordered to be printed.

DEPARTMENT OF THE INTERIOR,
Washington, D. C., January 27, 1873.

SIR: I have the honor to transmit herewith a copy of a letter of this date from Professor F. V. Hayden, United States geologist, submitting an estimate of appropriations, copy also herewith, required for the continuation of the geological survey of the Territories of the United States under the direction of this Department.

The results of Professor Hayden's labors in his several surveys, made under the direction of this Department, are most important and useful to the country at large, and in view of the immense field yet unexplored, a continuance of his operations, looking toward the development of our vast territorial domain, is deemed a subject worthy of favorable consideration by Congress.

Concurring in the views contained in Professor Hayden's letter, I earnestly recommend the appropriation of the sum asked for by him.

I am, sir, very respectfully, your obedient servant,

B. R. COWEN,
Acting Secretary.

Hon. JAMES G. BLAINE,
Speaker of the House of Representatives.

DEPARTMENT OF THE INTERIOR,
Washington, D. C., January 27, 1873.

SIR: I would most respectfully ask the attention of the Secretary of the Interior to the following views, in behalf of an appropriation for the expense of continuing the geological survey of the Territories of the United States during the fiscal year ending June 30, 1874.

The success which has attended its efforts during the past six years, the publication and distribution of its annual reports, which have been received with great favor, not only by the people in our own country, but in all parts of the world, would appear to entitle it to the confidence of Congress. I therefore venture to ask that additional power be given it to increase its efficiency, that it may continue to command the respect not only of men of science, but of the intelligent world generally.

For the last two years the survey has operated about the sources of the Missouri and Yellowstone Rivers, but the expenses of transportation, subsistence, and labor are so great, that it seems desirable to delay the further prosecution of the work in the Northwest until railroad communication shall be established. The Indians, also, are in a state of hostility over the greater portion of the country which remains to be explored. It seems desirable, therefore, to transfer the field of labor, for the coming season, to the eastern portion of the Rocky Mountain range, in Colorado and New Mexico. I propose to commence with the southern limit of the belt of the survey of the fortieth parallel, so successfully completed under the direction of Mr. Clarence King. The north limit of the area marked out is latitude $40^{\circ} 30'$; the western limit, the east bank of the Green and Colorado Rivers; the eastern limit, the 103d meridian west of Greenwich, extending to belt southward to the south line of the United States.

There is probably no portion of our continent, at the present time, which promises to yield more useful results, both of a practical and scientific character. This region seems to be unoccupied, at this time, as far as I am aware, by any other survey under the Government, and the prospect of its rapid development within the next five years, by some of the most important railroads in the West, renders it very desirable that its resources be made known to the world at as early a date as possible.

To render the organization more perfect, and to guarantee that it can meet the demands of the Government, so far as its duties are concerned, Mr. J. T. Gardiner, so long favorably known as the chief topographer of the geological survey of the fortieth parallel, under the direction of Mr. Clarence King, has become associated with me as chief of the topographical staff. Mr. Gardiner brings with him to this work the ripe experience of ten years of topographical work, extending over an area from the Pacific coast to the east base of the Rocky Mountains.

Mr. Gardiner thus expresses his conception of a true topographical map for geological purposes:

“For making maps suited to geological purposes it is necessary to carry over the country a systematic trigonometric and topographical survey, checked by astronomical observations. The maps must represent the features of the country accurately, and in bold relief; or, in other words, they must be a picture of the earth's surface as one would see it looking down from above.”

The work of the survey as contemplated by the present organization demands the very highest order of talent. To command this, it is necessary that the young men who may embark in this enterprise should feel a confidence in the permanency of the work, instead of regarding it as a stepping-stone to more lucrative positions. Each professional assistant is worth to the Government from fifty to one hundred per cent. more, every succeeding year. To make thorough astronomical, topographical, meteorological, geological, and botanical researches, and to develop the mining and agricultural resources properly, trained ex-

perts in all the different departments are absolutely essential. Such men, to identify themselves permanently with the survey, must be paid in proportion to their abilities.

I venture to assure you that the most rigid economy will be exercised in the expenditure of the public money under all circumstances.

In support of these views I would most earnestly beg your sanction to the estimate of \$100,000 for the continuation of the survey.

I have the honor to be, your obedient servant,

F. V. HAYDEN,

United States Geologist.

Hon. C. DELANO,

Secretary of the Interior.

For the continuation of the geological survey of the Territories of the United States, by Professor F. V. Hayden, under the direction of the Secretary of the Interior, during the fiscal year ending June 30, 1874, \$100,000, to be available on the passage of this law.

○

FREIGHTS VIA ISTHMUS OF PANAMA.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The amounts paid on materials, stores, &c., shipped via the Isthmus of Panama and Cape Horn for the fiscal years ended June 30, 1870, and 1871.

JANUARY 31, 1873.—Referred to the Committee on Military Affairs.

WAR DEPARTMENT, *January 29, 1873.*

The Secretary of War has the honor to return to the House of Representatives the resolution of the 7th instant calling for a report of the amounts paid for freight upon materials, stores, and supplies for the use of the United States forces at military stations on the west coast of the United States, via the Isthmus of Panama or Cape Horn, for the fiscal years ended June 30, 1870, and 1871, and to invite attention to the accompanying report of the Quartermaster-General containing the information requested.

WM. W. BELKNAP,
Secretary of War.

QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., January 25, 1873.

SIR: I have the honor to report, in reply to resolution of the House of Representatives of January 7, 1873, requesting statement of amounts paid for freight on materials, stores, and supplies, for use of United States forces at military stations on the west coast of the United States and Pacific Ocean, via the Isthmus of Panama or Cape Horn, for the fiscal years ended June 30, 1870, and 1871, that the records of this office show that the following amounts were paid for such transportation during the period required, viz:

Via Isthmus of Panama	\$32,194 89
Via Cape Horn	59,284 81
Total	<u>91,479 70</u>

The resolution of Congress is returned herewith.

Very respectfully, your obedient servant,

M. C. MEIGS,

Quartermaster-General, Brevet Major-General, U. S. A.

The Honorable SECRETARY OF WAR,
Washington, D. C.

CONSULAR AGENTS.

MESSAGE

FROM THE

PRESIDENT OF THE UNITED STATES,

RELATIVE TO

Consular agents, their reports and expenses.

JANUARY 31, 1873.—Referred to the Committee on Appropriations and ordered to be printed.

To the Senate and House of Representatives :

In compliance with section 2 of the act approved July 11, 1870, entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June 30, 1871, and for other purposes," I have the honor to submit herewith a letter of the Secretary of the Treasury, relative to the consular agents appointed under authority of said act, together with the amounts paid such agent; and to transmit the report of the said agent upon the consular service of the United States.

U. S. GRANT.

EXECUTIVE MANSION,
January 31, 1873.

TREASURY DEPARTMENT,
January 30, 1873.

SIR : In compliance with section 2, of the act approved July 11, 1870, entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June 30, 1871, and for other purposes," I have the honor to inform you that no new appointments of agents have been made under said section of law, as stated in my letter of December 11, 1872. However, the commission of De B. Randolph Keim, esq., was extended until December 1, 1872. I inclose for transmission to Congress the last report received from Mr. Keim, which contains a digest of all of his previous reports, and a summing up of the results of his investigations into the consular affairs of the United States.

It is also explanatory of an appended "bill to establish a consular service for the United States of America, and to amend and consolidate sundry acts of Congress relating to the duties of consular officers."

No payments have been made to Mr. Keim since my letter of December 11, 1872.

Very respectfully, your obedient servant,

GEO. S. BOUTWELL,

Secretary.

The PRESIDENT.

THE CONSULAR SERVICE
OF
THE UNITED STATES OF AMERICA:

ITS

PRESENT CONDITION, AND A PLAN OF RE-ORGANIZATION, EMBODIED
IN "A BILL TO ESTABLISH A CONSULAR SERVICE FOR THE
UNITED STATES OF AMERICA, AND TO AMEND AND
TO CONSOLIDATE SUNDRY ACTS OF CONGRESS
RELATING TO THE POWERS AND
DUTIES OF CONSULAR
OFFICERS;"

BEING

AN EPITOME OF OFFICIAL INVESTIGATIONS EMBRACED IN COMMUNICATIONS AND REPORTS

ADDRESSED TO THE

HON. GEO. S. BOUTWELL,
SECRETARY OF THE TREASURY,

DURING THE YEARS 1870, 1871, AND 1872.

BY

DE B. RANDOLPH KEIM,

AGENT FOR THE EXAMINATION OF THE ACCOUNTS AND BUSINESS OF THE
CONSULATES OF THE UNITED STATES OF AMERICA ON THE BRITISH
ISLES, IN THE COUNTRIES OF CONTINENTAL EUROPE,
CHINA AND VICINITY, THE EAST INDIES, AND
ON THE COASTS OF AFRICA AND
SOUTH AMERICA.

THE UNITED STATES OF AMERICA

TO CONSOLIDATE AND ENFORCE THE LAWS OF THE UNITED STATES OF AMERICA, AND TO PROVIDE FOR THE BETTER REGULATION OF THE CUSTOMS AND REVENUE OF THE UNITED STATES OF AMERICA.

A BILL FOR THE PURPOSES ABOVE DESCRIBED.

BY SENATOR JOHN C. CALHOUN.

INTRODUCED IN THE SENATE, JANUARY 1846.

BY SENATOR JOHN C. CALHOUN.

REPORT FOR THE YEAR 1846, AND FOR THE YEAR 1847, OF THE COMMISSIONERS OF THE LAND OFFICE, IN RESPONSE TO A RESOLUTION OF THE SENATE, PASSED MAY 18, 1846.

THE CONSULAR SERVICE OF THE UNITED STATES OF AMERICA, WITH AN APPENDED BILL.

READING, PENNSYLVANIA, *December 31, 1872.*

SIR: This report will terminate my investigations into the condition of the accounts and business of the consulates of the United States of America, under the provisions of the second section of the "act making appropriations for the consular and diplomatic expenses of the Government for the year ending June 30, 1871, and for other purposes," approved July 11, 1870.

In this important work, from the date of my appointment up to the present time, I have been engaged for nearly two years and six months. I have constantly had in mind a desire to accomplish some permanent results; with what success the future must determine.

This report, in a brief form, contains the substance of all my communications on the subject of the consular service, and the bill accompanying it embodies all the recommendations which I have made or still have to make in the matters of re-organization and improvement.

AUTHORITY TO EXAMINE.

I received my original appointment, as agent of the United States for the examination of consular affairs, &c., under the act of Congress, on July 19, 1870. I lost no time in starting on my journey, but experienced a delay of several weeks in waiting for a steamer to bear me from San Francisco, California, to Yokohama, Japan.

My route in this first official tour of consular examination was as follows:

	Miles.
From Washington, D. C., United States of America, by trans-continental railway, to San Francisco, California, United States.....	3, 272
From San Francisco, California, United States, to Yokohama, Japan, (summer route).....	4, 764
From Yokohama to Yedo, Japan, and return.....	40
From Yokohama, via the inland sea of Japan, to Shanghai, China, visiting the consulates of the United States at Hiogo, Osaka, and Nagasaki, ports of Japan.....	1, 190
From Shanghai, China, to Tien-tsin, North China, visiting the port of Chee-foo.....	763
From Tien-tsin to Pekin, China, and return.....	160
From Tien-tsin to Shanghai.....	763
From Shanghai to Han-kow, China, visiting the consulate of the United States at Chin Kiang.....	604
From Han-kow to Shanghai.....	604
From Shanghai to Hong-Kong, China, (British dominions,) via the Chinese ports of Foo-chow-foo, Amoy, and Swatow.....	920
From Hong-Kong, China, to Canton, and return.....	192
From Hong-Kong, China, to Macao, China, (Portuguese dominions,) and return.....	80

	Miles.
From Hong-Kong to Singapore, Malay, peninsula via Saigon..	1, 437
From Singapore to Batavia, Java, (dominions of the Netherlands,) and return.....	900
From Singapore to Calcutta, British India.....	1, 667
From Calcutta to Bombay, British India, via Great Indian Railway.....	1, 600
From Bombay to Suez, Egypt.....	2, 972
From Suez to Alexandria, Egypt, via overland railway.....	224
From Alexandria to London, England, via the Brindisi route..	1, 400
From London, England, to Panama, United States of Colombia, via Aspinwall.....	5, 045
From Panama down the west coast of South America, through the Straits of Magellan, and up the east coast to Rio de Janeiro, Brazil, visiting Guayaquil, Ecuador; Tumbez, Payta, Callao, Lima, Isla, and Arica, Peru; Coquimbo, Guayacan, Valparaiso, and Coronel, Chili; Punta Arenas, Patagonia, (Straits of Magellan,) and Montevideo, Uruguay, about....	13, 500
From Rio de Janeiro, Brazil, to New York, United States, visiting Bahia, Pernambuco, and Para, Northern Brazil.....	5, 200
From New York to Washington.....	228
Total number of miles traveled.....	47, 685

After revising my communications from the consulates visited during the above tour, (Ex. Doc. No. 11, House of Representatives, second session Forty-second Congress,) I completed a general report, dated at Washington, D. C., May 22, 1872, which was submitted by the President to Congress, May 24, 1872. (Ex. Doc. No. 317, House of Representatives, Forty-second Congress, second session.)

SECOND TOUR OF CONSULAR EXAMINATION.

By your letter of instructions of date of June 7, 1872, I was directed to examine the accounts of the principal consular officers of the United States in Europe, including England, Scotland, and Ireland. I set out on this second tour of examination on the first steamer from New York upon which I could secure suitable accommodations. This was June 29, 1872.

The following is a *résumé* of my route of travel on this official journey:

	Miles.
From Washington, D. C., to New York.....	228
From New York, United States, to Queenstown, Ireland.....	2, 777
From Queenstown to Cork, Ireland.....	11
From Cork to Dublin, Ireland.....	165
From Dublin to Belfast, Ireland.....	112
From Belfast, Ireland, to Glasgow, Scotland.....	100
From Glasgow to Dunblane, thence to Perth and Dundee, and thence to Edinburgh.....	171
From Edinburgh, Scotland, to Liverpool, England.....	225
From Liverpool to Manchester, England, and return.....	64
From Liverpool to Leeds, and return, via Bradford.....	128
From Liverpool to London, England.....	201

	Miles.
From London to Dover, England, via Canterbury.....	78
From Dover, England, to Ostend, Belgium.....	80
From Ostend to Antwerp, Belgium.....	70
From Antwerp, Belgium, to Rotterdam, Holland.....	59
From Rotterdam to Amsterdam, Holland.....	50
From Amsterdam, Holland, to Hamburg, Germany, via Han- over	360
From Hamburg to Berlin, Germany.....	176
From Berlin, Germany, to St. Petersburg, Russia....	1, 042
From St. Petersburg, Russia, to Vienna, Austria, via Moscow and Warsaw	2, 063
From Vienna to Trieste, Austria	363
From Trieste, Austria, to Venice, Italy.....	80
From Venice to Florence, Italy	187
From Florence to Rome, Italy.....	233
From Rome to Naples, Italy, and return	326
From Rome to Pisa, Italy.....	216
From Pisa to Genoa, Italy.....	164
From Genoa, Italy, to Lyons, France, via Turin.....	377
From Lyons France, to Geneva, Switzerland.....	106
From Geneva to Basle, Switzerland	175
From Basle, Switzerland, to Frankfort-on-the-Main, Germany.	215
From Frankfort-on-the-Main to Nuremburg, Germany, and return.....	294
From Frankfort-on-the-Main to Cologne, Germany.....	136
From Cologne, Germany, to Paris, France.....	304
From Paris, France, to London, England, via Calais.....	255
From London to Birmingham, England	129
From Birmingham, England, to Cardiff, Wales	150
From Cardiff, Wales, to Liverpool, England, via Chester.....	210
From Liverpool, England, to New York, United States.....	3, 013
From New York to Washington, D. C	228
Total miles traveled.....	15, 321

LIST OF CONSULATES OF THE UNITED STATES VISITED.

The following list will give you at a glance the names of the consulates of the United States visited by me, and also the time of my visit :

Consulate.	When visited.
JAPAN.	
Yedo.	September 28, 29, 1870.
Kanagawa	September 25 to October 1, 1870.
Hiogo and Osaka.....	October 3-12, 1870.
Nagasaki	October 13-15, 1870.
CHINA.	
Shanghai.....	October 17; December 24, 1870. During this time visited North China and the Yang-tsze.
Tien-tsin	October 27, November 20, 1870.
Chec-f6o	November 23, 1870.

Consulate.	When visited.
Chin-kiang	December 1-7-8, 1870.
Han-kow	December 4-6, 1870.
Foo-chow	December 27, 1870, January 3, 1871.
Amoy	January 9-13, 1871.
Swatow	January 14, 1871.
Canton	January 21-23, 1871.
Macao	January 28-30, 1871.
Hong-Kong	January 15, February 1, 1871, including visit to Canton and Macao.
CÔCHIN-CHINA.	
Saigon	February 5-6, 1871.
FARTHER INDIA.	
Singapore	February 9-20, 1871, including visit to Ba- tavia.
JAVA.	
Batavia	February 13-17, 1871.
BRITISH INDIA.	
Calcutta	March 1-4, 1871.
Bombay	March 20-25, 1871.
ARABIA.	
Aden	April 1, 1871.
EGYPT.	
Suez	April 8, 1871.
Alexandria	April 8-15, 1871.
UNITED STATES OF COLOMBIA.	
Aspinwall, (Colon)	June 7-14-15, 1871.
Panama	June 8-25, 1871.
ECUADOR.	
Guayaquil	July 4-5, 1871.
PERU.	
Tumbez	July 1-2, 1871.
Payta	June 30, July 6, 1871.
Callao	July 9-8, 1871.
CHILI.	
Valparaiso	July 27-30, 1871.
URUGUAY.	
Montevideo	August 12-13, 1871.
BRAZIL.	
Rio de Janeiro	August 18-26, 1871.
Bahia	August 29, 1871.
Pernambuco	August 31, 1871.
Para	September 4-5, 1871.

SECOND TOUR OF EXAMINATION.

Consulate.	When visited.
IRELAND.	
Cork	July 9, 1872.
Dublin	July 13, 1872.
Belfast	July 15, 1872.
SCOTLAND.	
Glasgow	July 17, 1872.
Dundee	July 19, 1872.
Leith	July 22, 1872.
ENGLAND.	
Liverpool	July 23-28, 1872.
Manchester	July 25, 1872.
Leeds	July 26, 1872.
Bradford	July 26, 1872.
London	July 29, August 5, 1872. (See England, below.)
BELGIUM.	
Antwerp	August 7, 1872.
HOLLAND.	
Rotterdam	August 8, 1872.
Amsterdam	August 9, 1872.
GERMANY, (NORTH.)	
Hamburg	August 10-12, 1872.
Berlin	August 13-16, 1872.
RUSSIA.	
St. Petersburg	August 19-23, 1872.
AUSTRIA.	
Vienna	August 31, September 2, 1872.
ITALY.	
Venice	September 4, 1872.
Florence	September 5-8, 1872.
Naples	September 16, 1872.
Rome	September 17, 1872.
Genoa	September 21, 1872.
FRANCE.	
Lyons	September 24, 1872. (See France, below.)
SWITZERLAND.	
Geneva	September 26, 1872.
Basle	September 27, 1872.
GERMANY, (MIDDLE.)	
Frankfort on the Main	September 28-29, 1872.
Nuremburg	September 30, 1872.

Consulate.	When visited.
FRANCE.	
Paris.....	October 5-9, 1872.
ENGLAND AND WALES.	
Birmingham.....	October 12, 1872.
Cardiff.....	October 14, 1872.
Liverpool.....	October 15-18, 1872.

COMPLETE LIST OF COMMUNICATIONS AND REPORTS.

The results of my examination into the accounts and business of the consulates of the United States visited by me, personally, and above enumerated, have been given in divers special communications and one general report. As it appears a matter of importance to me personally to show what use I made of my time, in addition to the labor of investigation, I will here include a list of all my communications and reports to date.

List of dispatches addressed to the Hon. George S. Boutwell, Secretary of the Treasury, respecting the condition of the consulates of the United States, by De B. Randolph Keim, agent, &c.

THE EMPIRE OF JAPAN.

Kanagawa, (Yokohama,) September 30, 1870, proposed route of travel and condition of the consulate of the United States at that port.

Nagasaki, October 15, 1870, respecting the consulates of the United States at Hiogo, Osaka, and Nagasaki, and conclusions upon the consular service in Japan.

THE EMPIRE OF CHINA.

Tien-tsin, November 17, 1870, on the condition of the consulate of the United States at that port and consular affairs in North China.

Han-kow, December 5, 1870, on the condition of consular affairs of the United States on the Yang-tsze and at Han-kow, in particular.

Chin-kiang, December 8, 1870, respecting that consulate.

Shanghai, December 22, 1870, respecting the consulate-general at that port.

Shanghai, December 23, 1870, respecting the consul-general.

Foo-chow, December 29, 1870, respecting that consulate.

Amoy, January 11, 1871, respecting that consulate.

Swatow, January 14, 1871, respecting that consulate.

Canton, January 23, 1871, respecting that consulate.

THE COLONY OF HONG-KONG, (BRITISH CHINA.)

Hong Kong, January 25, 1871, on the general condition of the consular service of the United States in China and Japan, with suggestions on the subject; also respecting the judicial powers of consuls.

Hong Kong, January 31, 1871, respecting that consulate.

THE EAST INDIES, (DUTCH.)

Batavia, Java, February 16, 1871, respecting that consulate.

THE EAST INDIES, (BRITISH.)

Singapore, Farther India, February 21, 1871, respecting that consulate.

Calcutta, Bengal, British India, March 4, 1871, respecting that consulate-general.

Bombay, British India, March 24, 1871, respecting that consulate.

EGYPT, (TURKISH DOMINIONS.)

Alexandria, April 14, 1871, respecting consular affairs at the agency and consulate-general of the United States at Alexandria, and generally embracing the entire subject in Egypt.

THE UNITED STATES OF COLOMBIA, SOUTH AMERICA.

Aspinwall, (Colon,) June 15, 1871, respecting that consulate.

Panama, June 18, 1871, respecting that consulate.

PERU.

Payta, June 30, 1871, respecting that consulate.

Tumbez, July 1, 1871, respecting that consulate.

ECUADOR.

Guayaquil, July 5, 1871, respecting that consulate.

PERU.

Callao, July 15, 1871, respecting that consulate, and suggestions for the improvement of the consular service of the United States on the west coast of South America.

Arica, July 1, 1871, respecting that consulate.

CHILI.

Valparaiso, July 29, 1871, respecting that consulate, and further suggestions in relation to the consular service of the United States on the west coast of South America.

URUGUAY.

Montevideo, August 14, 1871, respecting that consulate.

BRAZIL.

Rio de Janeiro, August 24, 1871, respecting that consulate.

Bahia, August 20, 1871, respecting that consulate.

Pernambuco, August 31, 1871, respecting that consulate.

Para, September 5, 1871, respecting that consulate.

Para, September 5, 1871, about the consulate at Maranhão, Brazil.

THE UNITED STATES OF AMERICA.

Washington, D. C., May 22, 1872, a general report upon the condition of the consular service of the United States, and a consular bill.

THE BRITISH ISLES.

Queenstown, Ireland, July 9, 1872, announcing arrival at that port, and the resumption of my investigations into the condition of the accounts and business of the consulates of the United States.

London, England, August 1, 1872, upon the condition of the consular service of the United States in the British isles.

BELGIUM.

Antwerp, August 7, 1872, upon the condition of the consular service of the United States in the kingdom of Belgium.

HOLLAND.

Amsterdam, August 9, 1872, upon the condition of the consular service of the United States in the kingdom of Holland.

GERMANY.

Berlin, August 16, 1872, upon the condition of the consular service of the United States in the kingdoms of Denmark and Sweden and Norway.

RUSSIA.

St. Petersburg, August 22, 1872, upon the condition of the consular service of the United States in the empire of Russia.

AUSTRIA.

Vienna, September 2, 1872, upon the condition of the consular service of the United States in the Austro-Hungarian empire.

ITALY.

Genoa, September 21, 1872, upon the condition of the consular service of the United States in the kingdom of Italy.

SWITZERLAND.

Basle, September 27, 1872, upon the condition of the consular service of the United States in the republic of Switzerland.

GERMANY.

Frankfort-on-the-Main, October 1, 1872, upon the condition of the consular service of the United States in the German empire.

FRANCE.

Paris, October 8, 1872, upon the condition of the consular service of the United States in the republic of France and dominions.

THE BRITISH ISLES.

Liverpool, England, October 16, 1872, supplementary report upon the condition of certain consulates of the United States in England and Wales.

CONCLUDING REPORT.

The present report will complete my labors in this work, and will contain a digest of all that has appeared in previous communications and reports, with a bill proposing a consular service for the United States, prescribing the details of its organization, and the duties of consular officers.

PUBLICATION OF REPORTS.

The act of Congress requires that the reports of the agent or agents appointed to examine into the condition of the consulates of the United States shall be submitted to Congress at the beginning of each December session. In accordance with this provision of the act, my reports, embracing my first tour of examination, were presented complete to Congress in December, 1871, and referred to the Committee on Foreign Affairs of the House of Representatives, and ordered to be printed. These reports will be found in Executive Document No. 11, House of Representatives, second session Forty-second Congress.

On May 22, 1872, I presented a general report entitled "A report to the Hon. George S. Boutwell, Secretary of the Treasury, upon the condition of the consular service of the United States of America," which was submitted to Congress by the President May 24, 1872, and referred to the Committee on Foreign Affairs and ordered to be printed. (See Executive Document No. 317, House of Representatives, second session of the Forty-second Congress.)

The last of the reports of my investigations in the countries of Europe were forwarded to the Department by the middle of November, were submitted to Congress by the President, and referred to the Committee on Foreign Affairs and ordered to be printed.

The present report, I presume, will also be submitted, and I hope will go further than its predecessors, by forming the basis of congressional action upon the much-needed reforms in the consular service of the United States.

A PERSONAL STATEMENT.

In the preceding pages I have taken the liberty of presenting a synopsis of what I have accomplished in the way of travel and in the report of the results of my examinations. I have done this partly in justice to the measure and partly in justice to myself. The idle statements of persons who should have been better informed were calculated to inaugurate the impression that the whole business was a sort of official holiday adventure. The quantity of work accomplished must represent my industry, and the quality must be the vindication of the work itself.

DIVISION OF THIS REPORT.

For the purposes of classification I will confine myself to the following general arrangement of subjects:

PART I.—General consideration of the causes and nature of the irregularities in the consular service of the United States.

Title I.—The causes of the irregularities in, and irresponsibility of, the consular service of the United States.

Title II.—On the nature of the irregularities in the consular service.

PART II.—Propositions looking to the re-organization of the consular service of the United States, and explanatory of the bill hereto appended for that purpose.

Title I.—On home organization.

Title II.—On foreign organization.

Title III.—On the commercial duties of consular officers.

Title IV.—On the duties of consular officers with respect to invoices.

Title V.—On the judicial powers of consuls.

PART I

CONSIDERATION OF THE CAUSES AND NATURE OF THE IRREGULARITIES IN THE CONSULAR SERVICE OF THE UNITED STATES.

TITLE I.—THE CAUSES OF THE IRREGULARITIES IN THE CONSULAR SERVICE.

The present consular service of the United States had its origin in the "act to regulate the diplomatic and consular systems of the United States," approved August 18, 1856. That act was, without doubt, an improvement, as regarded consular affairs, upon what preceded it. It also possessed some provisions which might have tended to the permanent advantage of the service, had it at the same time included the important matter of a directly responsible head.

Since the passage of this act divers new laws on the subject have been added and repealed, old laws have been patched up, until the consular service may be said to have ranged through all shades of legislation. It may be a fitting commentary upon this feature of the service to say that out of the forty-five acts having more or less to do with regulating, changing, enlarging, or modifying the consular service, fourteen are acts of appropriation. If I had the space I might make some curious exhibitions of the consular service on the statute-books. But even admitting that the act of 1856 fully met the demands of the consular service at that time, it is very clear from all that has been said and done in later years that the service has considerably outgrown it since.

THE GENERAL CHARACTER OF THE SERVICE.

On the subject of the general character of the consular service, in my report of May 22, 1872, I alluded to many of the causes which, in my opinion, led to the condition of things existing of late years. I also called your attention to the complaints, at different times, of the Fifth Auditors in your Department. From these, a person could but conclude that the consular duties had, too often to be creditable, fallen into the hands of a set of men difficult to find in any other branch of the civil service. Speaking of the effort to improve made in 1856, I used this statement :

The act of 1856 was doubtless designed to correct the most conspicuous of the abuses which prevailed, by placing certain classes of officers under a more direct responsibility to and control of the Government. The evils existing prior to that time may have been mitigated, or may have experienced a temporary abatement, but from transactions which subsequently came to the notice of your Department, they were certainly not eradicated. It would seem that the act gave rise to new forms of abuses, and these examples, inaugurated at certain places and in certain matters, have been perpetuated in most cases by each succeeding officer.

THE CAUSES OF THE DEFECTS OF THE SERVICE.

The causes which have brought about the demoralization of the consular service of the United States can be summarized under the following principal heads :

CAUSE I.—*The failure to appreciate the real nature and responsibility of the consular office.*

The views generally entertained have been opposed to a consular service on the ground of the consular office being a sinecure. Were these same persons to inquire into the necessities which gave rise, in the first place, to the appointment of consuls at foreign ports, and the multiplication of their duties with the advancement of the commerce of the world; were they even to consider seriously the dignity and importance of the consular office to-day, as compared with the same less than a quarter of a century ago, they would see what a change has taken place, and would probably, now, at least, admit that so far from being a sinecure, it possesses grave responsibilities. Treaties and conventions have enlarged the recognition given to consuls in international law. The privileges which they previously enjoyed, not as a right, but as the result of custom or the legislation of the country, are beginning to be conceded to them, not as consuls merely, but as privileges and immunities belonging to them, as important officers of a foreign state. The time must speedily come, with the steady progress of commercial intercourse, and the closer community of the industrial interests of the different nations of the world, when the consular officer will enjoy, if not fully, in a very little less degree, the inviolability of a diplomatic representative. The abstruse questions of commerce, local regulations, and inland trade, not speaking of innumerable other matters of incidental and daily occurrence, such as the charge of seamen, the supervision of ships' papers, and the execution of instructions on all subjects within his jurisdiction, require more than ordinary ability, and a character of ability, in my opinion, more circumstantial and yet fully as comprehensive as that of a diplomat at court treating upon international questions.

CAUSE II.—*Defects in the consular laws arising from a lack of practical knowledge of the actual wants of the consular service. To this might be added legislation upon ill-advised suggestions by persons not sufficiently comprehensive or practical in their views.*

It is true there have been a great many laws passed on various matters relating to the consular service. In my opinion there is too much law already upon some matters, and not enough, or practically none at all, in the very important feature of giving direct authority to some officer or special bureau to act and to enforce the laws in existence. The present system, as it works practically, would seem to be on the principle of everybody for himself. The only check upon a wholesale appropriation of the fees, or a reckless disbursement of the seamen's fund by some officers, has been the constant suspicions of bureau officers, whose long experience in the divers dodges and expedients often resorted to, has made them not over-ready to pass accounts. The injustice of such a course will be seen. The rascality of one unworthy officer must act to the disrepute and disadvantage of any number of worthy ones. At the best, this system must be the work of mere guessing.

In regard to the other part of the above cause, I can give no better example than the impracticability in some respects, the questionable economy in others, and, in the third place, in one particular feature the inconsistency of the act of Congress approved July 1, 1870, entitled "An act to amend an act entitled 'An act to carry into effect provisions of the treaties between the United States, China, Japan, Siam, Persia, and other countries, giving certain judicial powers to ministers and con-

suls, and other functionaries of the United States, in those countries, and for other purposes,' approved June 22, 1860." This act was, I have been informed by the gentleman himself, prepared by the consul-general of the United States at Shanghai, China, Mr. Seward. A perusal of the third section is a very fair index to the bill as a curiosity in its way.

CAUSE III.—*The effort to make the consular service a source of revenue by the payment of inadequate salaries to consular officers.*

I have seen it stated, as a matter worthy of considerable congratulation, that the consular service of the United States pays. It may bring a few extra dollars into the Treasury, but in the way it has been conducted all along it has taken many more thousands out. It has been a burden to our shipping by various personal impositions, and it has disgraced us in a national point of view beyond estimate.

CAUSE IV.—*The absence of a bureau organization at home, with a superintendent to have direct control over all financial and commercial matters relating to the consular service.*

The home business of the service at present hangs between two Departments, of State on the one hand, and the Treasury on the other. It would be next to impossible to define precisely the jurisdiction of either Department. The Treasury Department, in general, is charged with the collections made by the consuls in return for the performance of official duties. It audits and settles all accounts of consular officers, and has charge of all returns of fees which are made to the Secretary of the Treasury. The consul is emphatically an accounting officer of the Government, receiving fees for certain official services, and thus a revenue; and also he is a disbursing officer, expending considerable sums in the interests of American seamen. In all these matters he is required to keep accounts, and to make returns of amounts received and expended, and, for the faithful performance of this trust, he is responsible, naturally, to the Secretary of the Treasury. The consul is also a commercial agent, and, as such, should be held directly under the Department having special control of the commercial interests of the country.

In no sense can the consul, by virtue of his appointment, be regarded as a diplomatic officer. In my opinion it would be extremely advantageous were the jurisdiction of consular officers, in all matters pertaining to their consulates and their duties in the interests of commerce, transferred to the Department of the Treasury, and placed under the direct control of a bureau specially created for the purpose. By a law of 1854, the consular service of the British government was placed under the general superintendence of the board of trade, that arrangement, after long experience, having been found more consistent with the real nature of the consul's business.

I do not believe it desirable, or even practicable, in all matters to confine the consular service exclusively to the Treasury Department. I do believe, however, in having a single head, and, as the duties belong more particularly to commerce and accounts than to diplomacy, that head should be an officer of the Treasury Department. Consular officers exercising political or quasi-diplomatic functions, or the right to correspond with governors of colonies, should continue in such matters, and solely in such matters, to address the Secretary of State.

In my report of May 22, 1872, this subject was fully considered. I will

here make a few extracts from my remarks on the question of Department organization:

The first most serious objection that I see to the present consular service of the United States is the entire absence of any officer specially invested with authority over consular officers and their business. Those engaged in the faithful discharge of their duties have repeatedly mentioned to me that they hardly knew to whom they were responsible. It was true, they admitted, that the regulations conveyed instructions in regard to this question, but that they were frequently advised one way by one Department, and perhaps by the next mail received just the reverse instructions from the other. This is not extraordinary, when we consider the opposite duties of the two Departments. If a question of diplomacy were to be referred to the Treasury for consideration, the subject would certainly not receive the attention which would be the case at the hands of officers specially qualified and versed in such matters. For the same reason a question of commerce, revenue, or accounts would be equally out of place in the Department of State. It is upon this ground that I should recommend the concentration of the authority over the consular service in its general duties in one Department.

It will only be necessary to give here a list of the returns and accounts to be transmitted by consular officers to the respective Departments, State and Treasury, in order to show the incongruity of the present arrangement.

To the Department of State consular officers are instructed to transmit the following returns: *Quarterly*—a copy of the invoice-book, register of official letters received, register of official letters sent, arrivals and departures of American vessels, return of deceased American citizens, and returns of navigation and commerce; *semi-annually*—an abstract of passports issued; *annually*—the names of the persons employed at the consulate, and a statement of the aggregate amount of fees received.

A quarterly account is also required of rent and miscellaneous expenses with vouchers.

At the same time returns and accounts are required to be transmitted to the Fifth Auditor of the Treasury, as follows: *Quarterly*—a record of Treasury fees, with oath; a list of seamen shipped, discharged, or deceased, at the consulate; statement of relief to seamen, return of extra wages, fees received on account of vessels, statement of fees not contained in form No. 96, and hospital dues collected during the quarter; quarterly account-current to be accompanied by vouchers and certificates, as per forms specified, and quarterly salary-account, with certificate of non-absence and vouchers in case of sale of draft, as per forms specified.

In reflecting upon this division of the consular business between the Departments, it will be seen that with two exceptions these returns belong in their very nature to the Treasury. An invoice is a declared statement of the value of certain goods imported from a foreign country with a view to the payment of customs. All matters of customs belong to the Treasury; it therefore requires no argument to show that the copy of the invoice-book should go to that Department. It is the province and a necessity of that Department to know the values at which imported articles are being invoiced.

The registers of official letters received at and sent from the consulate are merely incidental to the business. The returns of arrivals and departures of American vessels, and of navigation and commerce, are devoted to a field of information and industry of peculiar importance to the Treasury. The aggregate of fees received sent to the Department of State is superfluous, as a sworn copy of the record is sent to the Fifth Auditor of the Treasury. The accounts of rents and miscellaneous expenses, though required to be sent to the Secretary of State, have finally to go to the Treasury for audit and payment. I even learn that part of these rents are paid directly from the Treasury. The confusion which must result from this can easily be imagined. If two rents are not often paid to the same consulate it is certainly no fault of the system.

In my judgment, all rents should go at once to the Treasury and be paid through the consular bureau proposed. The names of persons employed at the consulate should also unquestionably be sent to the Treasury, where they are paid, instead of to the Department of State.

The return of deceased American citizens should also go to the Treasury, where the proceeds of the estates of American citizens dying abroad, leaving no legal representatives, are sent, and the amounts paid over to their relatives and friends. The names of such citizens should be published by the Secretary of the Treasury.

This last observation would apply with peculiar force to the deaths of American seamen. Other inconsistencies might be mentioned, but the above are sufficient to explain this cause of embarrassment.

CAUSE V.—*The frequent filling of the consular offices with unsuitable or incompetent officers.*

No one can dispute the fact that many unfit persons have at different times secured places in the consular service. Among these, often, were those who knew beforehand about as little of the office and its duties, and with as little ability to learn, as it would be possible to conceive. It would be fair to presume that this class went out without any previously set plans of honesty; and, uncertain as to their lease of office, set to work at the earliest moment to make all they could, regardless of law, regulations, or personal reputation. From the subsequent history of this class, it is due to them to say that if they did not dignify the service by their presence, they certainly added to its notoriety, and pointed out its defects.

The officers, as a rule, at the time of my visit, had been obliged to open their books anew, or had had it done by a subordinate. Almost every consulate had some defects in its history, owing to the incompetency, low habits, and vulgarity of some of its officers, during the endless round of evils incident to official rotation. Abuses had been committed in the collection of fees, in the exercise of judicial powers, in the adjustment of the business affairs of American citizens, in the settlement, where permitted, of the estates of intestate American citizens dying abroad, in selling the American flag, in "running out" ships, in the discharge of seamen, in affording relief or medical attendance to destitute or sick American seamen, in issuing illegal passports, in countenancing shipping-masters, in taxing Chinese emigrants. Indeed, the most interesting feature of my investigations was the ingenuity displayed by consular officers, since the act of 1856 particularly, in defrauding the Government and grasping gains from various outside sources besides. My report of May 22, 1872, Part III, is filled with instances which prove the truth of these remarks.

CAUSE VI.—*The transient nature of the service, which tends to make officers either indifferent or indiscreet.*

CAUSE VII.—*Illiberality in salaries paid and allowances for office expenses and furniture.*

It would not be speaking too forcibly to say that, as a rule, the amounts paid for salaries to consulates are just sufficient to make the officer keenly feel and appreciate his degradation when brought in contact and comparison with his colleagues of other nations. His salary compels him, if he be without means of his own, and at the same time honest, to live in unsuitable quarters, and to eke out a careless, wayward sort of an existence, which often runs into low habits. The pay is insufficient, as a rule, to secure the services of persons of scholarly attainments or social standing, and, as a consequence, we have a display of American character by no means creditable. If the Government pays starving salaries, it is too much to presume that the men who fill the offices will starve for the sake of honesty.

CAUSE VIII.—*The granting of relief to destitute American seamen at foreign ports without the means of checking speculation, perjury, and fraud in the use of the fund for this purpose.*

There is no branch of the consular duties which has been put to greater abuse than the humane provisions of the Government to protect its destitute seamen cast upon a foreign shore. My report of May

22, 1872, Part III, as well as my special communications, are filled with instances of the downright rascality which has been practiced in this matter of relief. Large sums have been charged, and vouchers, explanations, and affidavits have been heaped upon the Department by the ream, and have been paid when the accounting-officers in the Department have no doubt thought that they were questionable. There is nothing in the law to authorize an officer to dispute an account which is in due form and against which no circumstantial objection can be found. In my general report I explained the process of securing vouchers for the relief of destitute seamen on the west coast of South America. When natives can be hired at low rates to accept relief and sign vouchers, there is no difficulty in the way of the consular officer exercising his humanity and reaching the Treasury in the most unabashed manner. On this same west coast of South America, where the commerce of the United States is smaller than that of any other part of the globe of equal importance, the expense of relief has amounted to as high as two-thirds and three-fourths of the entire sum thus expended by the Government. No one can be so credulous as to believe that there could be such a disparity of commerce and expenditures with an honest use of the fund. If this money were applied as I found at some ports, the Government would not have been at an expense ranging from \$60,499 in 1871 up to \$220,982 in 1860. The laws for the collection of the extra wages, which should go to this relief fund, are explicit enough, but I have found no uniform practice in their application. At some places I found the extra wages apparently had been collected in every case, and accounted for to the Government; at other places they had either not been collected at all, or had been appropriated by the consular officer, and the Government at the same time was charged with the expense of relief. I could mention instances, in any number, of the dodges and schemes resorted to by officers to reach this relief fund, and the success of these are not only perplexing to the officers of your Department, but absolutely provoking, when we consider the helplessness of the Government in striving to protect itself under the present system.

What check has the Treasury against these inroads? Absolutely none at all. No one save the author of the present laws would presume that the sending of a list of arrivals and departures of American vessels to the State Department, or a list of seamen shipped and discharged, or deceased, or a statement of relief of seamen and extra wages received, to the Treasury Department, would accomplish anything, or give the Auditor (Fifth) or Comptroller any sort of sensible information for the purposes of detecting peculation or irregularity of any kind. Such a system must strike every one who contemplates it for a moment as a burlesque upon official accountability. The trouble is not concerning the relief accounted for, because there would be no end of that, but as to how much is genuine and how much spurious. With a special bureau organization at home to manage consular affairs, I can see much good. There would then be a special officer in charge. A detailed account of each seaman relieved should be required. The name and description of the ship, her voyage, her owners, her home port, and everything tending to the identity of the man and vessel, should also be demanded before any accounts were passed. The bureau, through the collector of customs or his officers, could then trace up any case. By multiplying the dangers of peculation, and the probabilities of discovery, we naturally lessen the amounts thus illegally extracted from the Treasury.

The appended bill contains the plan I consider better adapted to secure accountability in the disbursements on account of relief, than the unjust, unequal, and irresponsible method now in vogue.

I might extend my observations upon the irregularities, irresponsibility, and unaccountability of the present consular system of the United States to an indefinite length. There is hardly a feature in it that does not indicate imbecility in point of executive force, humiliation in point of character, and mingled extravagance and penuriousness in point of practice. I do not consider myself, in the least degree, overstepping the bounds of decorum or of justice when I say this. I admit that there always have been some and perhaps a great many suitable persons filling the consular offices. I am of the opinion, as a class, they are infinitely better now than at any one time before. This the financial exhibits prove, and so do my own statements from personal experience. Yet the service itself is no better than before. The laws are more faithfully applied, but evils still exist, and always will while we have the present system.

CAUSE IX.—*The want of an officer resident in the country with supervisory powers over consular officers.*

CAUSE X.—*The want of a simple and temporary consular tribunal readily organized for the trial of consular officers at a foreign port or place.*

CAUSE XI.—*The want of a proper officer connected with the consular bureau to receive and to consider all complaints respecting the conduct, personal or official, of consular officers, and to secure prompt investigation, and, if guilty, summary punishment.*

I would state in connection with the eleventh cause that I should infer that it has been the practice of the Department in charge of consular officers to forward all complaints to the officers concerned. The effect of such a course is easily to be seen. If a consul is given to intemperance, (and this is no rare predilection,) or any other improper conduct, a complaint made is sent by the Department to the consul accused. In possession of the names of the parties who have thus exposed his unbecoming behavior, the consul immediately, without any further thought of the Government, sets up a system of persecution of the unfortunate person or persons thus dealt with. I am satisfied that repeated altercations have occurred between officers and citizens on no other grounds.

In my opinion it should be the province of every citizen of the United States to make complaint of the improper conduct of officers to the Government without being exposed in this inexcusable manner to the wrath of the accused. When consuls know that there is a tribunal to consider their delinquencies, and that they are in some way accountable, those who require such supervision will get it, and if their own self-respect will not keep them within reason, the Government will be able to make room for better men to take their places.

CAUSE XII.—*Neglect or inability to punish consular officers guilty of offenses.*

CAUSE XIII.—*The continued enforcement of obsolete laws and consular forms.*

As I will have occasion to allude to these subjects in the course of my explanatory observations respecting the provisions of the consular bill hereto appended, I will omit further discussion of them here.

TITLE II.—ON THE NATURE OF THE IRREGULARITIES IN THE CONSULAR SERVICE OF THE UNITED STATES.

In the third part of my report of May 22, 1872, I mentioned at length some of the irregularities I found existing in the service in Asia, Africa, and South America, and in my communications from Europe during the past summer made the same a subject of consideration respecting that part of the globe. As I have determined to make this more an abstract or digest of all my preceding reports than a statement of new facts, I will merely confine myself to deductions rather than to details, hoping those interested in this important matter may find it convenient to refer to my full reports.

CLASSIFICATION OF IRREGULARITIES.

The irregularities in the consular service may be classified as follows: First. Neglect of duty, either from incompetency or willfully.

Secondly. In the charging and accounting for consular fees.

Thirdly. In the relief of destitute seamen, and in the receipt of extra wages.

Fourthly. In the exercise of judicial powers by consular officers.

Fifthly. Respecting invoices.

Sixthly. In the use of the consular office for personal gain or advancement.

Under the first of these heads may be classed, neglect of duty from intemperance or indolence. It is beyond dispute, that ever since the existence of a consular service under our Government, persons have succeeded in getting into the offices who never had any fixed rules of sobriety; who never had any known occupation, nor consequently visible means of support. From such a set, the least expected the better. Probably, in equal proportion to the above, were those incompetent to perform their duties. Another class, but in less proportion, were those who, with ability and accepted character at home, lost all restraint abroad. And last, and I regret to say least in proportion to the whole, have been those in every sense worthy of the dignity, intelligence, and superiority of the American name.

In my report, speaking of these grades of persons who have held office, I speak at some length, either from my own experience or that of others. Page 82 of report of May, 1872, (Ex. Doc. No. 317, H. R. 2d sess. 42d Cong.,) gives an instance by way of illustration of the first. The second was exhibited in the condition in which I found the books, that is, the neglect which, at times, I found had extended to an absolute abandonment of all accounts. The third class may be best exhibited in the words of another. In regard to the condition of the service prior to 1861, Mr John C. Underwood, Fifth Auditor of the Treasury, in his official report, dated November 29, 1861, says:

I regret to be obliged to state that some of our consulates seem to have been exposed to considerable peculation from our own agents and officers. Although these officers are required by law to report quarterly, I found, on entering upon the duties of this office, that the last salary-report of the consul of so important a port as Liverpool was made March 31, 1858, and that the consul then acknowledged a balance in his hands of \$2,929.83. Since then he had strangely been permitted to hold on without reporting, spending all the funds he could reach, neglecting the payment of claims for food, clothing, and medical attendance of our sick and destitute seamen, and, by a course of plunder and profligacy unequalled in our consular history, contracting public and private debts, which, I am informed by a neighboring consul, probably exceed \$200,000. It is perhaps some consolation to know that this plunderer no longer disgraces the Government abroad.

* * * * *

Justice to my predecessor requires me to add that reports were made to the proper authorities of the delinquencies of the consul to Liverpool, without producing any decided action.

To quote from my own report:

It strikes me that a majority of the persons filling the consular offices, unable or unwilling to appreciate the importance of their position in the eyes of the community in which they reside, as soon as they get beyond the restraint of public opinion at home, cut loose from all moral obligations, and act in a manner as astonishing to themselves, I should say, as it is to the calm judgment of those who are able to preserve their self-respect without the influence and assistance of home opinion. It has often happened that officers have ignored all remembrance of the commission which they hold, and forget that, as Americans, they are taken as representatives of their countrymen. I have repeatedly heard complaints from consular officers that they do not receive the common civilities of American travelers. Taking some officers that I have seen or heard of, this attitude of personal relations is not extraordinary.

Of the last class, the really creditable officers, their own merits are the vindication of their work, and to secure such persons throughout it is only necessary to elevate the service by protecting it from the marauders who frequently take possession, and to pay such salaries in all cases as would secure ability and fidelity.

CONSULAR FEES.

Under the head of fees it would be unnecessary to state that many complaints have been made of overcharges. I have not the least doubt in most cases these complaints are well founded; but they are difficult to prove. In all the consulates, judging from my own knowledge, I think I can safely say not one in twenty has a table of fees posted, so that they may be seen. In my opinion every official paper should have the fee marked on it, requiring complaint of any amount charged in excess. In the returns of fees the exhibits of the past three years have been more flattering than ever before. The practice often resorted to by consuls in driving business from their own offices to their agencies, in order to secure the benefit of the law which allows them \$1,000 a year out of the aggregate fees received at such agencies, is also a common abuse. The following from my report of May, 1872, will show a comparison of fees received for twelve years:

2.—*Total amount of fees received, and excess of receipts or expenditures.*

For the fiscal year ending June 30—	Total amount of fees received.	Balance paid by the Treasurer of the United States,	Excess of receipts over expenditures.	Total.
1860.....	\$110,896 78	\$152,310 20		\$263,206 98
1861.....	99,113 23	160,410 04		259,523 27
1862.....	77,590 21	212,273 41		289,863 62
1863.....	152,982 94	252,417 43		405,400 37
1864.....	254,218 34	109,561 65		363,779 99
1865.....	287,108 00	71,653 64		358,761 64
1866.....	442,477 56		\$91,906 62	350,570 94
1867.....	424,099 17		42,088 77	382,010 40
1868.....	435,179 73		61,428 84	373,750 89
1869.....	459,722 43		75,722 54	383,999 89
1870.....	534,670 79		73,706 20	460,964 59
1871.....	632,258 22		147,619 59	484,638 63

NOTE.—Fees returned for 1860 and 1861 extend respectively to December 31, 1859 and 1860.

THE RELIEF OF SEAMEN.

I have already called attention to the fact of the fund for the relief

of destitute American seamen abroad being the most fruitful source of speculation.

The act of 1803 and other acts define the meaning of an American seaman, and make provisions for his discharge and relief. These acts make the master of a vessel of the United States responsible for the return of all of his ship's company to the United States, or of accounting for them in the manner prescribed by law.

THE COLLECTION OF THREE MONTHS' EXTRA WAGES.

By provision of law, it is the duty of all consular officers of the United States, when seamen of the United States are discharged, for the reasons given below, to collect of the vessel three months' pay over and above the wages which may then be due to such seamen. These collections may be made as follows:

First. When a ship or vessel belonging to a citizen of the United States shall be sold in a foreign country, and her company discharged.

Secondly. When a seaman shall, with his own consent, be discharged in a foreign country.

Thirdly. When a vessel has been condemned by inspectors.

Fourthly. On the complaint of a seaman that the voyage is continued contrary to his agreement, or that he has fulfilled his contract, the same to be determined by an examination of the facts by the consular officer.

There are also cases in which extra wages shall not be collected.

RELIEF OF DESTITUTE SEAMEN.

Of the extra wages collected, except in certain cases, mentioned in the laws and regulations, one-third goes to the United States and two-thirds to the discharged seaman. The one-third forms a fund in the possession of the Government, to be disbursed, under certain defined rules, for the relief of American seamen destitute in a foreign port, and who may seek the consulate for support and shipment home.

ABUSE OF THE RELIEF FUND.

It is without question that the most outrageous frauds upon the Government have been perpetrated by consular officers in the use of this relief fund. Overcharges, false vouchers, and every other means which dishonesty could devise have been resorted to to get hold of the money thus dedicated to this most laudable act of humanity.

RELIEF ACCOUNTS IN ASIA AND EGYPT.

I found at most of the consulates of the United States, in Asia and Egypt, what I consider a reasonable expenditure on account of the relief of destitute American seamen. In two instances, since my visit, these amounts have fallen off, at the same time the amount of shipping has increased.

At Calcutta, British India, I discovered, notwithstanding the revival of trade since our late rebellion, that the amount expended during the two years previous to my visit for the relief of destitute seamen was comparatively small. In regard to American vessels and sailors, the consul-general complained that he had been at no small amount of difficulty to preserve order among the sailors, and to keep peace with the local authorities.

STATEMENT OF THE RELIEF ACCOUNTS IN SOUTH AMERICA.

The following general statement of relief at the consulates of the United States in South America will show the totals for the three years ended June 30, 1871. With the exception of Aspinwall and Panama, my investigations did not commence until after the close of the fiscal year of 1871. At the two ports named, there are certain circumstances which might afford some excuse for the amount expended, particularly at Aspinwall, which are from \$141, in 1870, to \$995.65 in 1871. The Isthmus is the great thoroughfare from California, the west coasts of Mexico, Central and South America, to the United States. The demands, therefore, upon the consulate are liable to considerable change from year to year.

I would, however, call your attention specially to an increase of expenditure at the following points:

Guayaquil.—The expenditures at this port are out of all reason, upon the grounds that there is absolutely no American shipping worthy of the name. The statement that seamen come there from other ports for relief I do not believe, for the reason that access to the port from up or down the coast by land is almost impossible.

At *Tumbez* the peculation which has been going on, through false vouchers and other means, is evident by the sudden fall in the expenditure from \$3,646.12, in 1870, to \$204.25. The latter is, perhaps, a reasonable allowance. I consider this decline chiefly influenced by the intemperate habits of the late consul, which fact disqualified him from keeping his accounts.

The appointment of a new officer, a resident at the port, will, it is to be hoped, permanently remedy the evils which have existed.

At *Payta* the greatest frauds have been committed for some years, under the plea of relieving seamen from whale-ships. I may say it is my belief, after careful investigation, that not one voucher out of ten is an honest statement of a *bona-fide* expenditure. The port has no trade with the United States, and the number of whale-ships arriving there is small. As the town is surrounded by a desert, it furnishes neither wood nor provisions, nor even water. It will be seen, too, that the expenditures at Payta, with no commerce, exceed the port of Callao, where there is a large American trade.

The same could be applied to *Talcahuano*, where, I am of opinion, irregularities are also being constantly perpetrated.

At the ports in Europe visited by me, I found a quite reasonable expenditure, though the trade was large. There are ports, *Fayal* and *Malaga* for instance, where the expenditures are unnecessarily large. I regretted that within my limited time I could not reach those consulates and examine their accounts. The recommendations, however, which I will have to make will control the expenditures there as well as elsewhere. While speaking on this subject, I desire to quote here from the reports of some of the officers of your Department.

Fifth Auditor Underwood, in his report of November 29, 1861, above quoted, says:

Some of the consulates on the Pacific coast and islands need investigation and reform. In four of these consulates, the disbursements for the relief of seamen during the year embraced in the last report from this office exceeded \$114,000, and were about \$8,000 more than the disbursements of all our other consulates reported during the same year.

After showing a diminution in this class of expenditures, this officer continues:

But we have been unable to effect a radical cure of the chronic difficulty. In these

distant consulates there are both temptations and facilities for procuring fictitious vouchers, and the correctness of papers on the face is generally in proportion to the enormity of the frauds they cover. Nothing short of the supervision of an officer of capacity and competent authority will be able to complete the necessary reform. When by proper safeguards our consuls shall be relieved from all temptation to devise ways and means to reach the Treasury by fraudulent vouchers, they will have more time to attend to their legitimate duties, and we shall have reason to expect that the real wants of our seamen will be better supplied, and the receipts for seamen's wages will be increased.

The report of the Fifth Auditor, dated October 18, 1869, says :

In the matter of accounts for the relief of seamen, flagrant abuses exist, many of which can only be detected and corrected by personal visits to consular offices, and inspection and investigation by those familiar with the service and the mode of making up these accounts and vouchers.

I will not at this place make use of many figures, as I will have occasion for them again in explaining the provisions of the accompanying bill on the subject of relief. But, by way of comparison, I would call your attention to the following exhibit from official sources :

1871—Europe.	Disbursed.	Received.	West coast South America.	Disbursed.	Received.
Liverpool.....	\$2, 116 03	\$3, 973 55	Talcahuano.....	\$5, 829 72	\$1, 439 00
London.....	325 29	30 00	Payta.....	4, 229 89	440 00
Havre, (1870).....	421 75	278 38	Tumbez, (1870).....	3, 646 12	481 00
Havre, (1871).....	296 34	194 97	Tumbez, (1871).....	204 25	100 00
Hamburg.....	26 00	115 08	Guayaquil.....	1, 082 46	Nothing.
Total.....	3, 185 41	4, 591 98	Total.....	14, 992 44	2, 460 00

The above ports are the most important in Europe and the least important on the west coast of South America, in a commercial point of view. I think it would be safe to say that at least seven hundred vessels arrived at the former ports, while not one-tenth of that number arrived during the same time at the latter.

Notwithstanding this, at the European ports named, \$3,185.41 were disbursed for relief, and \$4,591.98 received on same account, against \$14,992.44 disbursed, and \$2,460 received, at the west coast ports of South America, for the same period.

I would also particularly call attention to the accounts at Tumbez. Here, in 1870, \$3,646.12, with the second quarter of 1870 not received, were expended for relief, while the next year the amount fell to \$204.25. This difference I account for in the fact that up to the time of my visit a most disgraceful condition of things had existed at that port.

The officer then holding that place was removed. I gave at the time a full account of his performances and those of his predecessors. I would particularly call attention to the contents of my report of May, 1872, page 142 to 158.

In Europe the consulates most doubted in the regularity of their relief accounts, are Malaga, in Spain, and Fayal, in the Azores. This portion of my bill will have in view the establishment of a more equitable method of supplying the relief fund with means, and a more accountable disposition of this fund for the benefit of destitute American seamen.

JUDICIAL POWERS OF CONSULS.

The next irregularities I found to exist were in the exercise of judicial functions by consular officers of the United States in China and Japan and other countries. In my report of May, 1872, page 159 to 166, and page 249 to 261, I treated upon this subject. The defects and the

methods of improvement which presented themselves to my mind, I mentioned there. All that I will have to say here on this important matter shall be to repeat the following words from the above report, pages 249, 250 :

THE POWERS CONFERRED BY THE JUDICIAL ACT OF 1860.

The provisions of the act of June 22, 1860, with regard to Japan and China, notwithstanding the imperfection of the Japanese treaty, have since been exercised to the fullest extent by consular officers in both countries. The settlement of disputes involving pecuniary and personal interests, frequently of no small moment, has been the least of these powers. The consular officer is also empowered, with the assistance, in certain cases specified, of not to exceed four reputable fellow-citizens residing at the port, to determine cases of property and crime involving crimes and imprisonment, and capital offenses punishable with death, the execution of the criminal alone requiring the approval of the minister of the United States residing in such country.

To thus have the property, the lives, and liberties of American citizens in their hands, is intrusting the highest functions to officers separated from the Government by thousands of miles. Yet such are the powers conferred upon and exercised by consular officers of the United States in China and Japan. It would be impossible to conceive how much injustice has been done through ignorance or indifference, or how much oppression has been practiced through dishonesty and greed. That instances of abuses from these causes have occurred there can hardly be a doubt. My own examinations have shown this sufficiently to leave no uncertainty on the subject in my own mind.

The two points at which the largest amount of judicial business devolves upon the consular officers are Kanagawa, (Yokohama,) Japan, and Shanghai, China. At the other ports of both countries this duty is of importance only in proportion to the extent and character of American interests. More frequently these disputes are determined by the simpler and more desirable means of arbitration. I have sometimes thought, in the course of my investigations into consular judicial matters, that the responsibility of the consular officer in Japan and China has never been entirely appreciated at home.

The conduct of the officer at Kanagawa, (Yokohama,) Japan, at the time of my visit in 1870 was fully reported by me. The appointment of a new officer was in every sense advantageous to the interests of the Government at that important port.

INVOICES.

On the subject of invoices, I am of the opinion there is a general disposition on the part of consular officers to execute the laws, but I found at the principal offices in Europe there existed considerable confusion as to the interpretation of the laws. With some modification of, and addition to the laws and regulations, and a clearer setting forth of the duties of consuls in the premises, I think this portion of the service would be made more effective and intelligible. In order, however, to expect and to secure harmony of action, it would be even more necessary than a change of the laws, to enforce my plan of establishing a special bureau for the consular service, and to place everything relating to invoices under the supervision of that bureau. At present, a most conflicting and contradictory course is pursued in this matter.

Naturally, invoices belong to the Treasury, and for their correctness, &c., officers should be held responsible to the Secretary of the Treasury supremely, and be under the supervision of a special officer subordinately. In my communications from the British Isles I spoke of the legalized extortion practiced upon persons bringing invoices for verification, by first compelling them to pay a fee to a commissioner for administering the oath, and, in addition, requiring them to pay the just fee of \$2.50 to the Government. In treating of that portion of the appended bill relating to invoices, I will present the subject in detail.

ABUSE OF CONSULAR POWERS.

I will but mention the other instances of irregularity which came to my knowledge, as some of these were more the abuse of the powers vested in the consular officer than a violation of the law itself, while others involved both. If I were to make any more than allusion to them, I would be compelled to exceed greatly the space which I have allowed to this report. I will mention the subject with a reference to my report of May 22, 1872, (Ex. Doc. No. 317, H. R., 2d sess. 42d Cong.:)

NO CONSULAR OFFICER EVER PUNISHED.

To cap the climax of all, I am not aware of a single case of formal investigation and punishment of a consular officer for his offenses. Even removal from office, where made, has been as a rule extremely tardy. I am, therefore, not surprised at the temerity of officers in the unfaithful performance of their trusts.

CONCLUSION.

For the benefit of those who may wish to pursue their investigations more in detail respecting the consular service of the United States, I will here take the liberty of referring them to my report of May 22, 1872, (Ex. Doc. No. 317, H. R., 2d session 42d Congress.) The suggestions of consular reform will be, however, somewhat modified and improved in the present report, but the materials which have formed the basis of these suggestions are the same.

PART II.

PROPOSITIONS LOOKING TO A RE-ORGANIZATION OF THE CONSULAR SERVICE OF THE UNITED STATES AND EX- PLANATORY OF THE BILL HERETO APPENDED FOR THAT PURPOSE.

TITLE I.

On the subject of the laws relating to consular affairs, in my report of May, 1872, I expressed the following views:

The consular service of the United States is embraced in sundry acts of Congress commencing as early as 1792. The number of these acts, and frequently the diversity of subjects treated upon in them, have created a degree of confusion which has in no small measure added to the embarrassments experienced both at home and abroad. In some instances, as in the particular act of 1856, the consular service has been a subject of special enactment. But for consular changes in the way of repeals of other acts or parts of acts, or additions or modifications which have been incorporated into acts having no direct reference to the subject, I have but to refer specially to such repeals and changes in the workings of the service carried through in appropriation bills. I should urgently recommend the repeal of all laws relating to the consular service, and the passage of one complete bill covering the whole ground. For this purpose I take the liberty, in a subsequent portion of this report, of submitting a bill containing such amendments as have occurred to me as necessary to the promotion of the efficiency of the service, and embody in the new bill such portions of the old as I think advisable to retain. I should recommend the bill alluded to as having, in my opinion, in part an advantage over the old system, particularly in the features of organization at home and abroad, and in the more detailed and comprehensive provisions for the carrying into effect of the treaties with China, Japan, and other pagan countries, according judicial functions to consular officers. In its general features it will also have the merit of bringing the whole subject into one bill.

The subsequent pages of this report, therefore, will be explanatory of my reasons for the more important provisions of the bill which I have the honor to submit.

TITLE II.—ON HOME ORGANIZATION.

In the first part of this report I alluded to the embarrassment experienced from the present division of the consular service between the Departments of State and the Treasury.

In the former Department the service is under the direction of two consular bureaus, and in the latter the accounts are audited and settled respectively by the consular divisions of the bureau of the Fifth Auditor and the office of the First Comptroller. I attribute all the lack of accountability in, and effective administration over the consular service to this distribution of authority.

For instance, should the assessors and collectors of internal revenue be appointed by the Secretary of the Interior, should the rents of offices and incidental expenses be under the supervision of that Department,

and should these same officers be compelled to make a statement of their tax-books to the same Department, and return all taxes received to the Treasury, and further, should these officers receive instructions from both Departments, it would be difficult to conceive the confusion or to estimate the losses which would annually fall to the lot of the Government. Officers would find opportunity for practices which, under such a division, could easily elude notice.

This principle has worked the demoralization of the consular service.

The internal revenue of the country is intrusted to the direct management of a single head, responsible to the supreme authority of the Secretary of the Treasury. In unity of action there is strength. The Commissioner has under his supervision all the officers of his vast bureau, and it is he who is responsible for any inefficiency in the service, from any decrease, all things being equal, in the revenue from internal taxation.

Consular officers are as much accounting-officers as are assessors and collectors. In the first case the returns are receipts from consular fees, in the second, receipts from internal taxes.

The same success which has attended the administration of the internal revenue laws under a single Commissioner would, unquestionably, attend the consular service under a single superintendent. As far as this part of the principle is concerned, in order to secure a consolidation of the service under one head, subordinate only to the Secretary, it would almost matter little in which Department the bureau were established. Although as accounting-officers, the work of accounts and invoices—that is, all matters relating to salaries, fees, relief of destitute American seamen, and instructions respecting invoices, which belong to revenue from imports—could, unquestionably, be more satisfactorily transacted in the Treasury Department.

For the same reason, any questions of a diplomatic nature, or any consuls in the exercise of judicial powers, should on such subjects continue to address their communications to the Secretary of State. A proposition so self-asserting in its application scarcely needs as much vindication as I have given it.

CONCERNING A DEPARTMENT OF COMMERCE.

A plan which I should prefer to the one which I have in view would be the creation of a department of commerce, to have charge of all matters relating to our internal and external commerce. To that department I should then recommend the assignment of the consular service, its officers, and their duties.

EXPLANATIONS OF THE PROVISIONS OF CONSULAR BILL.

The first parts of the bill (Sections I to VII) are devoted to some necessary preliminaries, repealing certain laws, continuing others, definition of terms, &c.

BUREAU OF THE CONSULAR SERVICE ESTABLISHED.

The home organization of the consular service is inaugurated by the establishment of a bureau of the consular service, (Section VIII.)

Section IX provides that the said bureau shall have charge of all matters not diplomatic and pertaining to the duties of consular officers.

SUPERINTENDENT OF THE CONSULAR SERVICE TO BE APPOINTED.

Section X designates the principal officer as the superintendent of the consular service of the United States, and defines how he shall be appointed.

Section XI designates the subordinates to be attached to the bureau.

Section XII designates and fixes the salaries of all officers and employés of the bureau.

Sections XIII and XIV prescribe the duties of the superintendent under this act and other acts relevant to the service, and also define his general duties, under the direction of the Secretary of the Treasury, as superintendent of the service.

Section XV relates to the use of the seal.

ORGANIZATION OF THE CONSULAR BUREAU.

For the purposes of organization, classification, and transaction of business, Section XVI further provides for the organization of the bureau of the consular service, and defines the duties of its respective branches under the following divisions:

First. The division of accounts for salaries, rents, hospital dues, and consular fees, and all other accounts not otherwise assigned.

Secondly. The division of consular appointments and property containing names and record of officers, and lists of property of the United States at the different consulates.

Thirdly. The division of seamen, charge of relief accounts, and all other matters relating to seamen presented by the act.

Fourth. The division of invoices to have charge of all instructions and other matters, except accounts for fees relating to invoices.

Fifthly. The division of judicial powers of consuls, so far as relates to the financial business incident to the provisions of this act relating thereto.

Sixthly. The division of consular archives and commercial statistics, &c.

THE SPECIAL DUTIES OF THE SUPERINTENDENT OF THE CONSULAR SERVICE DEFINED.

In order to complete the definition of the duties of the superintendent of the consular service, the bill (Sections XVII, XVIII, XIX, XX, XXI, XXII,) next requires that that officer, under the direction of the Secretary of the Treasury, shall prepare all forms of books, instruments, blanks, and papers, necessary to the business of consulates and the carrying out of the provisions of this act; defines the penalties for forgery of seal and fraudulent alteration of forms, and for not using the forms issued by the Department. It also designates the annual reports to be made by the superintendent of the consular service to the Secretary of the Treasury for transmission to Congress; respecting the home and foreign work of the service; requires the superintendent to prepare a commercial report to be submitted to Congress by the Secretary of the Treasury within thirty days after the commencement of each ordinary session; requires for the purpose of this report that consular officers make returns to the Secretary of the Treasury, under cover to the superintendent of the consular service, at the time and in the manner instructed, of commercial, mercantile, and other information respecting the ports or places at which they reside; requires a record of consular

books, forms, seals, arms, flags, presses, and furniture, of all kinds, the property of the United States at each consulate; explains the superintendence of the transfer of such property from one officer to another, and holds officers accountable for all destruction, waste, or loss of property, unless said destruction, waste, or loss is to be accounted for in a satisfactory manner.

The importance of this section is greater probably than might be imagined. At present there is an intention to assure this accountability, but, as far as I can learn, the practice of it is merely nominal. Consular officers, upon removal, leave their posts and carry with them almost everything of any possible use. There is scarcely a consulate visited by me that has not had some of the books of the office taken away by officers. At one time this was a common practice, insomuch that I do not remember finding a complete set of books from the time of the establishment of the consulate to the present. As far as the furniture is concerned, that is safe, for there is hardly a consulate of the United States, in any part of the globe, that has any furniture worth appropriating. The allowance on this score is usually as follows: a book-case and desk, without chairs on which to sit, or any other convenience for the transaction of necessary business. The rest of the furniture is the property of the consul, generally purchased from his predecessor. According to the present liberal facilities for the transaction of consular business, the consul has no chair belonging to the Government to offer a citizen to sit upon while waiting.

If the same principle of responsibility were applied in the Quartermaster's Department of the Army, it would be difficult to comprehend the situation of the property of the Government.

I can see no reason why there should not be allowed a reasonable supply of furniture other than a book-case, desk, and Patent-Office Reports. Neither is there any reason why there should not be a rigid rule of accountability exercised over such matters.

As one of the results of this state of things I was not surprised to find in Aden, (Arabia,) a consulate which seemed to have been lost to the Government; a Parsee, or fire-worshiper, in possession of flags, books, seals, arms, &c., which had been used at the consulate which had existed there some years before. I was not conscious of the existence of this office, as the Official Register contained no record of it. My astonishment, therefore, while awaiting the coaling of the steamer, was not slight when I discovered the consular arms of the United States over the entrance to one of the buildings, and within found books and other belongings of such an office. I learned that the consulate had been discontinued, and that the consul, on leaving, had turned the books, &c., over to this Parsee. I did not find that any other use had been made of this self-assumed consular rank than to make some display of dignity and show in connection with an unimportant trade in small wares. How much more property of the United States belonging to abandoned consulates might be gathered together, if its whereabouts were known, has often been a subject of speculation in my mind. Taking all these things together into consideration, the wisdom and necessity of some control over consular property, as provided by my bill, must be apparent to all.

GENERAL PROVISIONS.

The remaining provisions (Sections XXIII, XXIV, XXV, XXVI, XXVII) relate to the acceptance in evidence of certificates and documents sealed and signed in a given manner; define the application of

all moneys and fines paid out to the Treasury on account of the consular service; authorize consular and naval officers and certain officers of the customs to see that the provisions of the act are complied with, and prescribe when, and how, and under what restrictions an inspector may be appointed, how much he shall be paid, describe his powers, when and how he shall report, and fix the penalty for obstructing him in the execution of his duty.

This closes that portion of the bill defining the nature and extent of the bureau organization at home, and sufficiently states its powers and duties so as to enable the superintendent of the consular service in charge to carry out everything required of him under the provisions of the bill.

TITLE II.—ON FOREIGN ORGANIZATION.

The next question of importance, after an accountable, compact, and efficient home organization, is the creation of a subordinate and well-adapted foreign establishment. The most serious defect in the consular service has always been its *personnel*. Together with the efficient and in every way creditable officers, a set of doubtful characters have slipped in, and, as a rule, the service has not organization sufficient to find out the delinquents, or to fill their places with better material. In the first part of this report, in speaking of unsuitable persons as consuls, I have given a few instances in point, and have shown how much the service has suffered from its own officers. To overcome this objection, I have incorporated into my bill a simple classification to take the place of the present questionable method; have proposed a scale of pay upon which officers can live without the necessity of a petty system of speculation or imposition in order to keep out of debt; have made allowance for rents and clerical services which will free officers from unnecessary pecuniary burdens, and have made other provisions for the transaction of office business, and for the detection, trial, and punishment of unfaithful officers.

I think what I have to propose will prove a simple and feasible system to take the place of the present series of conflicting, illy-defined, expensive, and, in a pecuniary point of view, deceptive laws.

CHIEF FEATURES OF THE SECOND PORTION OF THE BILL.

Subordinate to the bureau of the consular service comes the organization of the consular service abroad. This subject constitutes the second chapter of the bill which I propose, and in addition to the naming of consulates and their classification, it makes ample provisions for the appointment of the necessary officers, the payment of salaries, and prescribes the general duties and powers of consular officers, and the penalties for a violation of their trust, and other unofficial conduct.

CONSULAR OFFICERS ASSIGNED TO THE TREASURY.

This important subject was long a matter of thoughtful consideration with me. In my investigations I found that many of the pecuniary irregularities might be traced to the administration of the service by a divided authority. The question which then arose in my mind was, what change could be made to unite this authority under a single head. I found that consular officers were, in every essential particular, accounting-officers. That being the case, it was easy to determine under what

control they should be placed. But I found it necessary to go further. The whole of the general administration of the service was directly in charge of the two Assistant Secretaries of State and a number of clerks. I could not learn that their duties were more than the receiving and acknowledging of dispatches and giving instructions. If I felt at liberty I might present some curious facts respecting the nature and effect of this arrangement. In the Treasury Department the accounts were heaped in with a number of others, and no strictly responsible officer had the control of these. The proposition as to which of the two Departments the duties of the consul most largely tend was soon settled in my mind. With the necessary bureau organization, and the transaction of the business by experienced accountants, I feel confident of greater accountability and economy. For these reasons, in Section XXXIII, I make consular officers, in the matters stated, officers of the Treasury.

ORGANIZATION OF THE PERSONNEL.

The next defect to be considered was a simple organization of the consular establishment of the Government to take the place of the present complex and ill-defined system. Under the present laws we find agents and consuls-general, vice-consuls-general, deputy consuls-general, consuls, vice-consuls, deputy consuls, consular agents, commercial agents, vice-commercial agents, consular clerks, and office clerks. Here we find ten varieties of consular officers, and two varieties of clerks. The first will be understood to mean a *quasi*-diplomatic officer. Of the rest, I have found in the cases of deputy and vice a distinction without a difference, and commercial agents are a class of officers known only to our consular service. These being a sort of supernumerary class, their creation at first, and appointment since, have been, as I can see, of no advantage to the service. The class of officers which should be abolished as unnecessary or disadvantageous to the service, are deputies consuls-general, deputy consuls, commercial agents, and vice-commercial agents. In the consular service proper there should be allowed the following grades of officers: Consuls-general, vice-consuls-general, consuls, vice-consuls, and consular agents.

In regard to clerks I will speak hereafter.

Next to this division of consular offices, I find an equally curious system of pay—a system which has been found admirably suited to a variety of constructions, all of which, as may be supposed, are not to the advantage of the Government. Of the salaried consuls and commercial agents there are two classes of each, known as schedules B and C. Schedule B, it is proposed, shall mean officers not permitted to trade, and the other to mean officers permitted to trade. Of each of these classes and schedules we find the following number:

11 consulates-general.....	schedule B
119 consulates.....	schedule B
34 consulates.....	schedule C
4 commercial agents	schedule B
9 commercial agents	schedule C

177

The annual salaries of these officers range from \$7,500 down to \$500, and the total amount allowed by law to \$346,500 a year. The average pay per officer is \$2,000 a year. Out of the whole number, ninety-four consuls, or over one-half, receive \$1,500 or less a year. I have men-

tioned too often, in my former report, the incongruities of consular pay to repeat them here. It would seem, in a time of unbounded liberality, a newly created consulate would receive an amount of salary all out of proportion when compared with older and largely more important ones. In France, Havre, the least important of five consulates, including the consulate-general, over twice as much salary as at Marseilles, Lyons, or Bordeaux is paid, while the fees at Havre are less than \$3,500 a year, against \$2,300 at the other places; and the fees of the consulate-general for the past fiscal year have been nearly twenty times greater than Havre. I might mention numerous instances of this nature to prove that the present system of pay is not only unjust, but is no ratio to the importance of the office. This question, reduced to a single proposition, might be stated as follows: that, as a rule, the consulates of the United States receiving the most pay have the least responsibility. As I have frequently stated in my communications respecting the service, if a consulate is worth paying for at all, it is worth paying for sufficiently to enable its officer to live. The system of paying consuls salaries, and allowing them to trade besides, is demoralizing to the service. There are many advantages to be gained by a merchant in having in his establishment a consulate of the United States. It brings him increased trade, and gives him facilities which it would be well enough he did not possess in that way. If a consular office of this kind be necessary, it should be established in the shape of a vice-consulate or consular agency, subordinate to a full and principal officer, to keep the Government advised of the condition of the work.

PROPOSED CLASSIFICATION OF CONSULAR OFFICERS.

In order to classify consulates with a view to the salary of their officers, I have considered three principal points: first, the extent of pecuniary responsibility in fees; secondly, the extent of responsibility in transactions relating to ships and seamen; and thirdly, the extent of their importance in a political aspect. From the present list I have culled the useless offices. By "useless" I mean consulates which have had their day, but which have lost their importance during the mutations of trade and the springing up of new interests elsewhere.

The organization which I propose for the *personnel* of the consular service of the United States may be summed up as follows, (Sections XXXVI and XXXVII:)

CONSULS-GENERAL.

1. Liverpool, England.....	\$7,500
2. Paris, France.....	7,500
3. Vienna, Austria.....	6,000
4. Rio de Janeiro, Brazil.....	6,000
5. Calcutta, British India.....	6,000
6. Montreal, British America.....	6,000
7. Shanghai, China.....	6,000
8. Cairo, Egypt.....	6,600
9. Berlin, Germany.....	6,000
10. Kanagawa, (Yokohama,) Japan.....	6,000
11. Panama, United States of Colombia.....	6,000
12. Havana, West Indies.....	6,000
	75,000

VICE-CONSULATES-GENERAL.

1. Shanghai, China.....	\$3,000
2. Kanagawa, (Yokohama,) Japan.....	3,000
	6,000

CONSULATES OF THE FIRST CLASS.

1. London, England.....	\$4,000
2. Manchester, England.....	4,000
3. Melbourne, Australia.....	4,000
4. Sheffield, England.....	4,000
	16,000

CONSULATES OF THE SECOND CLASS.

1. Belfast, Ireland.....	\$3,000
2. Birmingham, England.....	3,000
3. Bradford, England.....	3,000
4. Glasgow, Scotland.....	3,000
5. Hong-Kong, China, (British).....	3,000
6. Singapore, Farther India, (British).....	3,000
7. Tunstall, England.....	3,000
8. St. Petersburg, Russia.....	3,000
9. Hamburg, Germany.....	3,000
10. Havre, France.....	3,000
11. Lyons, France.....	3,000
12. Honolulu, Hawaiian Islands.....	3,000
13. Callao, Peru.....	3,000
14. Amoy, China.....	3,000
15. Canton, China.....	3,000
16. Chin-kiang, China.....	3,000
17. Han-kow, China.....	3,000
18. Foo-chow, China.....	3,000
19. Swatow, China.....	3,000
20. Tien-tsin, China.....	3,000
21. Nagasaki, Japan.....	3,000
22. Osaka and Hiogo, Japan.....	3,000
23. Bangkok, Siam.....	3,000
24. Tangiers, Barbary States.....	3,000
25. Tripoli, Barbary States.....	3,000
26. Tunis, Barbary States.....	3,000
	78,000

CONSULATES OF THE THIRD CLASS.

1. Bombay, India, (British).....	\$2,500
2. Cardiff, Wales.....	2,500
3. Coaticook, Dominion of Canada, (British).....	2,500
4. Dundee, Scotland.....	2,500
5. Fort Erie, Dominion of Canada, (British).....	2,500
6. Hamilton, Dominion of Canada, (British).....	2,500
7. Huddersfield, England.....	2,500
8. Leith and Edinburgh, Scotland.....	2,500
9. St. John, New Brunswick, (British).....	2,500
10. Toronto, Dominion of Canada.....	2,500
11. Aix-la-Chapelle, Germany.....	2,500
12. Crefeld, Germany.....	2,500
13. Bremen, Germany.....	2,500
14. Carlsruhe, Germany.....	2,500
15. Chemnitz, Germany.....	2,500
16. Dresden, Germany.....	2,500
17. Frankfort-on-the-Main, Germany.....	2,500
18. Leipzig, Germany.....	2,500
19. Nuremburg, Germany.....	2,500
20. Sonneburg, Germany.....	2,500
21. Bordeaux, France.....	2,500
22. Marseilles, France.....	2,500
23. Matanzas, Spanish.....	2,500
24. Batavia, Java, (Netherlands Indies).....	2,500
25. Antwerp, Belgium.....	2,500
26. Brussels, Belgium.....	2,500
27. Basle, Switzerland.....	2,500

28. Zurich, Switzerland.....	\$2,500
29. Constantinople, Turkey.....	2,500
30. Buenos Ayres, Argentine Republic.....	2,500
31. Valparaiso, Chili.....	2,500
	77,500

CONSULATES OF THE FOURTH CLASS.

1. Bay of Islands, (British).....	\$2,000
2. Cape Town, Africa, (British).....	2,000
3. Ceylon, India, (British).....	2,000
4. Charlottetown, Prince Edward Island, (British).....	2,000
5. Clifton, Dominion of Canada, (British).....	2,000
6. Cork and Queenstown, Ireland.....	2,000
7. Demerara, Guiana, (British).....	2,000
8. Dublin, Ireland.....	2,000
9. Gibraltar, Spain, (British).....	2,000
10. Goderich, Dominion of Canada, (British).....	2,000
11. Halifax, Nova Scotia, (British).....	2,000
12. Kingston, Jamaica, (British).....	2,000
13. Kingston, Dominion of Canada, (British).....	2,000
14. Malta, Mediterranean, (British).....	2,000
15. Nassau, Bahama Islands, (British).....	2,000
16. Newcastle-on-Tyne, England.....	2,000
17. Picton, Dominion of Canada, (British).....	2,000
18. Port Louis, Mauritius, (British).....	2,000
19. Port Sarnia, Dominion of Canada, (British).....	2,000
20. Saint Helena, Atlantic, (British).....	2,000
21. Saint John's, Quebec, (British).....	2,000
22. Seychelles, Indian Ocean, (British).....	2,000
23. Sydney, Australia, (British).....	2,000
24. Turk's Island, West Indies.....	2,000
25. Victoria, (British).....	2,000
26. Windsor, (British).....	2,000
27. Winnipeg, British North America.....	2,000
28. Mayence, Germany.....	2,000
29. Munich, Germany.....	2,000
30. Stettin, Germany.....	2,000
31. Stuttgart, Germany.....	2,000
32. Odessa, Russia.....	2,000
33. Algiers, Africa, (French).....	2,000
34. Calais, France.....	2,000
35. Cognac, France.....	2,000
36. Nice, France.....	2,000
37. Florence, Italy.....	2,000
38. Genoa, Italy.....	2,000
39. Leghorn, Italy.....	2,000
40. Messina, Italy.....	2,000
41. Naples, Italy.....	2,000
42. Palermo, Italy.....	2,000
43. Rome, Italy.....	2,000
44. Barcelona, Spain.....	2,000
45. Cadiz, Spain.....	2,000
46. Malaga, Spain.....	2,000
47. San Juan, Porto Rico, (Spanish).....	2,000
48. Santiago de Cuba, Cuba, (Spanish).....	2,000
49. Trinidad de Cuba, Cuba, (Spanish).....	2,000
50. Amsterdam, Holland.....	2,000
51. Curaçoa, West Indies, (the Netherlands).....	2,000
52. Rotterdam, Holland.....	2,000
53. Prague, Austria.....	2,000
54. Trieste, Austria.....	2,000
55. Copenhagen, Denmark.....	2,000
56. Saint Thomas, West Indies, (Danish).....	2,000
57. Geneva, Switzerland.....	2,000
58. Stockholm, Sweden.....	2,000
59. Jerusalem, Turkey.....	2,000
60. Smyrna, Turkey.....	2,000
1. Piræus, Greece.....	2,000

62. Fayal, Portugal.....	\$2,000
63. Lisbon, Portugal.....	2,000
64. Acapulco, Mexico.....	2,000
65. Guayamas, Mexico.....	2,000
66. Matamoras, Mexico.....	2,000
67. Mazatlan, Mexico.....	2,000
68. Vera Cruz, Mexico.....	2,000
69. Aspinwall, United States of Colombia.....	2,000
70. Bahia, Brazil.....	2,000
71. Para, Brazil.....	2,000
72. Pernambuco, Brazil.....	2,000
73. Cape Haytien, Hayti.....	2,000
74. Laguayra, Venezuela.....	2,000
75. Montevideo, Uruguay.....	2,000
76. San Domingo, West Indies.....	2,000
77. San Juan del Norte and San Juan del Sur, Nicaragua.....	2,000
78. Talcahuano, Chili.....	2,000
79. Zanzibar, Africa.....	2,000
80. Apia, Friendly and Navigator's Islands.....	2,000
81. Lanthala, Feejee Islands.....	2,000
82. Tamatav, Madagascar.....	2,000
83. Tahiti, Society Islands.....	2,000
	166,000

RECAPITULATION OF COST OF PROPOSED SALARIES.

12 consuls-general.....	\$75,000
2 vice-consuls-general, (salaried).....	6,000
4 consuls, Class I.....	16,000
26 consuls, Class II.....	78,000
31 consuls, Class III.....	77,500
83 consuls, Class IV.....	166,000
	418,500

COMPARISON OF APPARENT COST OF PRESENT AND PROPOSED SERVICES.

Apparently, we have the following results in a comparison of the costs of the present and the proposed salaries :

Amount of salaries of proposed service.....	\$418,500
Amount of salaries of existing service.....	346,500
In favor of present service.....	72,000

By this classification of the offices, a number not essential to the efficiency of the service, and certainly not necessary to its economy, are proposed for abolition as follows :

CONSULATES-GENERAL.

1. Alexandria, transferred to Cairo, Egypt.....	\$3,500
2. Beirut, Turkish dominions.....	2,000
3. Tampico, Mexico.....	1,500

CONSULATES.

Schedule B.

4. Barmen, transferred to Crefeld, Germany.....	1,500
5. Bologna, transferred to Calais, France.....	1,500
6. Brindisi, Italy.....	1,500
7. Elsinore, Denmark.....	1,500
8. Funchal, Madeira Islands, (Portuguese).....	1,500

9. Hakodadi, Japan	\$2,500
10. La Rochelle, France	1,500
11. Leeds, transferred to Huddersfield, England	2,000
12. Nantes, France	1,500
13. Oporto, Spain	1,500
14. Port Mahon, Minorca, (Spanish)	1,500
15. Port Said, Egypt	2,000
16. Prescott, Dominion of Canada	1,500
17. Quebec, Dominion of Canada	1,500
18. San Juan del Sur, Nicaragua	2,000
19. Southampton, England	2,000
20. Spezia, Italy	1,500
21. Santa Cruz, West Indies, (Danish)	1,500
22. Valencia, Spain	1,500
23. Windsor, Nova Scotia, (British)	1,000

Schedule C.

24. Aux Cayes, Hayti	500
25. Canea, Crete, (Turkish)	1,000
26. Carthagena, Venezuela	500
27. Cobija, Bolivia	500
28. Cyprus, Turkey	1,000
29. Guayaquil, Ecuador	750
30. Maranhão, Brazil	1,000
31. Mexico, Mexico	1,000
32. Omoa, Honduras	1,000
33. Payta, Peru	500
34. Paso del Norte, Mexico	500
35. Rio Grande, Brazil	1,000
36. Saint Catharine, Brazil	1,500
37. Tobasco, Mexico	500
38. Santiago, Cape de Verde	750
39. Tumbez, Peru	500
40. Venice, Italy	750

COMMERCIAL AGENCIES.

Schedule B.

41. Auckland, (British)	1,000
-------------------------------	-------

Schedule C.

42. Amoor River, Russia	1,000
43. Gaboon, Africa	1,000
44. Saint Paul de Loando	1,000
45. Sabanilla, United States of Colombia	500

57,250

The following is a list of consulates transferred :

CONSULATES-GENERAL.

1. Alexandria, \$3,500, to Cairo, Egypt	\$6,000
---	---------

CONSULATES.

Schedule B.

2. Barmen, \$1,500, to Crefeld, Germany	2,500
3. Bologna, 1,500, to Calais, France	2,000
4. Leeds, 2,000, to Huddersfield	2,500
8,500	13,000

CONSULATES CREATED.

The following is a list of new consulates, not including changes of classification, or pay of consulates already receiving salaries, proposed to be created into salaried offices:

1. Berlin, Germany, consulate-general.....	\$6,000
2. Bombay, India, (British,) consulate.....	2,500
3. Bradford, England, consulate.....	3,000
4. Brussels, Belgium, consulate.....	2,500
5. Cairo, Egypt, consulate-general.....	6,000
6. Calais, France, consulate.....	2,000
7. Cardiff, Wales, consulate.....	2,500
8. Carlsruhe, Germany, consulate.....	2,500
9. Cognac, France, consulate.....	2,000
10. Copenhagen, Denmark, consulate.....	2,000
11. Crefeld, Germany, consulate.....	2,500
12. Curaçoa, West Indies, (Dutch,) consulate.....	2,000
13. Dresden, Germany, consulate.....	2,500
14. Dublin, Ireland, consulate.....	2,000
15. Florence, Italy, consulate.....	2,000
16. Hamilton, Dominion of Canada, consulate.....	2,500
17. Leith and Edinburgh, Scotland, consulate.....	2,500
18. Mayence, Germany, consulate.....	2,000
19. Mazatlan, Mexico, consulate.....	2,000
20. Nuremburg, Germany, consulate.....	2,500
21. Prague, Germany, consulate.....	2,000
22. Sheffield, England, consulate.....	4,000
23. Sonneberg, Germany, consulate.....	2,500
24. Saint John, New Brunswick, (British,) consulate.....	2,000
25. Sydney, Australia, (British,) consulate.....	2,000
26. Victoria, Columbia, (British,) consulate.....	2,000

At most of the consulates above created, the fees are greatly in excess of salaries, and in addition to this, considerable trade has grown up in the adjacent districts. For instance, at Bradford, England, a feed commercial agency, not only unsalaried, but not even a consulate, the fees in 1871 amounted to \$16,706. At Bombay, Cairo, Copenhagen, and Sydney, the reasons for the change are commercial and political, and have little or no reference to fees.

ON CONSULAR SALARIES.

Before entering into a comparative exhibit of the present and proposed consular system, I wish to make a few preliminary remarks respecting the present schedules and manner of compensation of consular officers of the United States.

The laws of the United States relating to the salaries of consular officers prescribe as follows:

1. Salaried consuls are restricted to the amount of their salaries.
2. Exception: Salaried consuls receiving \$1,500 a year, and from whose consulates, without the agencies, fees are paid into the Treasury to the amount of \$3,000 a year, receive \$500 a year additional, or, in the aggregate, \$2,000 a year.
3. Feed consuls are limited to \$2,500 out of the fees, if the fees reach or exceed that sum.
4. Consular agents—maximum allowance out of fees, \$1,000 a year.
5. Salaried consular officers are allowed to retain \$1,000 in the aggregate out of the fees from the agencies in their consulates.

In brief, this is the system now in practice in the payment of the salaries of consuls. I have shown that the fixed compensation amounts to \$346,500 a year, but with the \$500 a year extra to salaried consuls out of the excess above \$3,000 fees at their own consulates, and the

\$1,000 a year out of the aggregate of fees received at consular agencies, the actual cost is largely more than is really shown by the published reports. In addition to this we must also include \$2,500 a year to feed consuls out of their fees, and \$1,000 to consular agents out of fees.

By reflecting a moment, it will be readily seen that the consular service, in addition to its average inefficiency, is extravagantly expensive. This serious matter is what prompted me in previous communications and reports to speak of the consular laws in some respects as deceptive, and calculated to cover up the actual expenses of the consular service of the United States.

In a general way I will show, by statement from official sources, the practical working of the present system of consular pay.

I have found, I may say, that official statistics, especially printed, are not always rigidly correct, but for my purposes the figures which I shall use are at least an approximation, and as such will answer. The fees employed in the annexed table are those reported under the law which requires annually a statement of the aggregate of fees received in each consular district to be sent to the Department of State. These fees, returned to December 31, 1871, I find printed in the Register of the State Department, corrected to September 25, 1872. I presume the returns to be correct as far as they go, though in many instances there are no reports; but the material at hand will enable me to illustrate my point. Where there are no returns, their omission is so much taken away from the aggregate of the increased expense of the consular service over the sums reported.

The following statement gives the aggregate by countries. A detailed view of each consular district would unnecessarily increase the length of my report.

Name of country and consulate.	Salaries, consuls.	Unsal'd consuls.	Consular agencies.	Pay of consuls fixed by law.	Fees received at consulates for year ended Dec. 31, 1871.	Allowance to consuls out of fees.	Aggregate of fees received at consular agencies.	Allowance to consular agents out of fees.	Allowance to consuls out of agents' fees.	Balance of agents' fees to Government.	Total salary to consuls.
Argentine Republic.....	1	3		\$2,500 00	\$4,333 59						\$2,500 00
Austria.....	2	1	3	3,500 00	10,388 75		\$554 83				6,500 00

Total.....	172	125	245	346,500 00	563,132 73	76,437 37	86,718 11	51,975 47	19,337 18	15,405 46	442,274 55

In the above table will be seen an approximation of the cost of the present consular service, including the fixed salaries of full and principal consulates, the allowance to consuls out of fees of consulates and agencies, and the amount retained by consular agents. In this statement I accept the letter of the law, as already given in an abridged form, and make my calculations thereupon.

We have the following results:

Amount of salaries paid and fees retained by consuls, and commercial and consular agents	\$494,250 02
Amount of fixed salary allowed by law	346,500 00
Total amount expended upon unsalaried consular officers and agents in fees retained by salaried officers	147,750 02
Total amount retained by consular agents or subordinate officers	51,975 47
Total amount paid to consuls in excess of fixed salaries prescribed by law ..	95,774 55

These figures in a synoptical form show the workings of the present system of paying consular officers. The law fixes salaries of certain consulates, which in the aggregate amount to \$346,500. Additional provisions are made which run this amount up to \$442,274.55, or \$95,774.55 more.

Now, let me compare the amounts allowed by the present system with that which I propose. The deception of the laws regulating the pay of consular officers I have alluded to.

Total pay of salaried and feed consuls-general and consuls	\$442,274 55
Total cost of pay of consuls-general and consuls by proposed system	418,500 00
Total amount in favor of the proposed system	23,774 55

With this should also be considered the important fact that under the present rate of pay nine-tenths of the salaried consular officers are unable to live either decently or respectably. By the proposed system the pay is adapted to the cost of living and the requirements of the consular office in a social or political point of view.

By the figures which I have used we find the following results in a comparison of the amount of fees received and salaries proposed:

Fees received and accounted for to December 31, 1871	\$563,132 73
Salaries proposed	418,500 00
Total amount of fees in excess of proposed salaries	144,632 73

It will be here seen that the Government, after paying living salaries, will still have a revenue of \$144,632.73 a year from the consular service.

ON CONSULAR SALARIES IN GENERAL.

Section XXXVIII to Section XLII relates to the terms on which salaries shall be paid; leaves of absence granted; declares salaries to be in lieu of salaries and fees formerly paid; that salaried consular officers shall not transact business, and that compensation shall be in full.

UNOFFICIAL FEES.

In addition to the present complex mode of fixed compensation, and the retention of a certain amount of the fees, there exists a class of fees known as "unofficial fees." I have found much irregularity in fees to have been caused by this corrupting exception to the requirement of consular officers to account for all fees received. In the appended bill I make the compensation in full for salary. It is possible for a consular officer to construe many fees into unofficial, and in this way may, with

apparent honesty, deprive the Government of its lawful returns for his official services. I consider that every service performed by a consular officer, in his official capacity, should be paid for, and the fee should be accounted for to the Government.

For personal services which he is called upon to perform, only on account of his office, he should not charge, as any such personal services accorded should be gratuitous, and be left to his own discretion or humanity. By law a full consular officer is not allowed to trade, neither would he be allowed to engage in any profession, not even to correspond for newspapers. The object of these restrictions, it is apparent, is to keep him constant in his duties to the Government.

For the same reason he should not be allowed to spend the time of the Government, and that includes all his time, in other matters for which he may receive an unofficial fee. As I have said, if a consular officer received a fee, it should be an official fee, and be credited to the Government. By making his salary the pay in full, the loop-hole opened for his escape in case of illegal charges would be closed up, and a speedier and more certain way to discovery and punishment would be opened.

OFFICE EXPENSES AND RENTS.

In no respect is the consular service more deficient, and in some places more humiliating, than in the matter of office expenses and rents. The allowance of 10 per centum of the salary in addition is in no way adequate to the object in view, even when applied to the few consulates sufficiently paid. This sum, therefore, estimated upon the pittance paid for salaries at a majority of the consulates, assumes rather ludicrous proportion.

Section XLIII of the proposed bill makes the additional allowance to be thus applied 20 per centum of the salary, and this is made to cover office-rent, fuel, lights, cleaning, repairs, &c., &c. As the result of a very careful personal investigation of the subject, I will state that rents in most places have advanced from 50 to 75 per cent. I suggest the increase to the figure mentioned to cover all office expenses, so that each officer may have a proportionally equal recognition. I regret to state, as my opinion, that great partiality has been shown in the allowances for these purposes. Some consuls have almost every request gratified, whereas others are scarcely treated with common humanity, and out of a small salary the officer must live and pay nearly all his office expenses. I have carefully considered the subject, and find that 20 per cent. will not more than cover the items mentioned in the section of the bill. The additional cost of this arrangement, as compared with the present, would not be material. For instance :

Ten per cent. allowance on amount of salaries to paid and feed consuls.....	\$44,227 45
Five per cent. extra, say, for office expenses.....	22,113 72
Total cost of rents and office expenses at present	<u>66,341 17</u>
Twenty per cent. on proposed salaries for rents and office expenses.....	\$83,700 09
Total amount paid at present for same	<u>66,341 17</u>
Additional cost of proposed allowance to meet increased cost of rents, &c.....	<u>17,358 83</u>

ALLOWANCE FOR CLERK-HIRE.

The employment of clerical assistance for consular officers at the more important offices has evidently been a matter of considerable difficulty. The legislation on this subject exhibits curious uncertainty and vacilla

tion. After the repeal of a bill authorizing consular clerks, and the creation in their place of a grade known as consular pupils, with duties and requirements which, if ever enforced, would require youths of supernatural powers of intellect and endurance, the latter was abolished, and a return was made to the consular clerks. Under the present law, section 2 of the consular diplomatic appropriation act, approved June 20, 1864, the appointment of not to exceed thirteen consular clerks is authorized, the said clerks to be citizens of the United States, to be over eighteen years of age, and to receive \$1,000 salary per annum.

The application of this law has been an expense, without any practical benefit to the service. From the latest official sources I find the distribution of the clerks appointed as follows:

Place and country.	Number.	Salary.	Amount of fees to Dec. 31, 1871.
Paris, France.....	3	\$3,000	\$35,309 75
Shanghai, China.....	2	2,000	9,839 85
Havana, Cuba.....	2	2,000	19,512 41
Leipsic, Germany.....	1	1,000	7,882 25
Liverpool, England.....	1	1,000	40,646 00
Alexandria, Egypt.....	1	1,000	67 97
	10	10,000*	

If we take the above table, and compare the number of clerks at each of the consulates named, we find that Alexandria, Egypt, with \$67.97 fees received during the fiscal year ended June 30, 1871, has the same clerical force allowed it as Liverpool, England, where the fees were \$41,218.43 for the same period. But this is not the only peculiarity. Paris, with a return of fees for the same year amounting to \$20,776, or say \$50,000 during a year of peace, has three consular clerks, whereas London, with \$51,240.73 fees, has no clerks at all paid by the Government. Leaving out Paris and Liverpool, and we find either London, Manchester, or Sheffield, in England, more important in the matter of fees than Havana; yet the latter city has two consular clerks and the former three none. Leaving out Paris, London, and Havana, and we find any one of the following consular offices, Belfast, Bordeaux, Bradford, Berlin, Barmen, Chemnitz, Birmingham, Glasgow, Hong-Kong, London, Lyons, Manchester, Matanzas, Montreal, Saint John, (New Brunswick,) San Juan, (Porto Rico,) Sheffield, Tunstall, or Zurich, in receipt of fees greatly in excess of Shanghai; yet the latter has two consular clerks. In all of the above-named offices there is not a single clerk paid by the Government. One of the above consulates alone returns seven times the amount of fees received at Shanghai. There are nineteen consulates more important than Leipsic, and one hundred and sixty more lucrative than Alexandria; yet Leipsic and Alexandria have each a consular clerk, while the number of consulates above stated are entirely without clerks paid by the Government.

I mention these facts in order to show the practical working of the present arrangements for clerical assistance at consulates.

Until recently there was a consular clerk at the consulate-general at Beirut. I perceive that this appointment has been canceled, and that a new one has been assigned to Alexandria, Egypt. For the fiscal year of 1871 the fees at the former office amounted to \$109.12, and at the latter to \$67.97.

* To June 30, 1871.

I do not think it at all wise or economical to fix the number and pay of consular clerks. This branch of the service, in my opinion, should be regulated by the importance of the business of the consulate.

If consular clerks were considered prospectively consuls, it might be well to create a grade of *quasi* officers, to be assigned to the most important consular officers until promoted to vacancies in the lowest grade of consuls; but as there is no prospect, at least immediate, of so radical an improvement in the tenure of appointment and term of office, by commissioning officers during good behavior, I do not see that there is any advantage to be gained from the payment of \$1,000 a year, which is about half what an American can live on decently in a foreign land, to a consular clerk, who must be a citizen of the United States.

The plan which I bring out in the appended bill is capable of expansion or contraction, according to the requirements of the service.

In this branch of the service, I think, it would be more economical and fully as advantageous to the service to permit the employment of natives at the ruling rates of salary paid in first-class mercantile houses at the place for the same character of work. On this plan, two or three equally efficient clerks could be secured for the present allowance for a single clerk. It would certainly be desirable to employ American citizens, provided they were sufficiently well paid. In the absence of suitable provisions in this respect, I consider the next best course that proposed.

The plan, therefore, which I suggest is an allowance of 15 per cent. of the fees in excess of \$4,000 received at any consulate, exclusive of the fees from agencies, in any one year, to be used for clerk hire, but in no case should the said allowance be less than \$250, nor more than \$3,500 at any one consulate in any one year. This would allow Paris, London, Liverpool, and Manchester the maximum amount, and thirty-three other consulates of less receipts of fees smaller amounts in proportion to the amount of business, down to the minimum allowance of \$250. In order to prevent any abuse of this allowance, the bill requires the consular officer to make application through the proper channels for authority to appoint clerks. Before any amounts are paid, the appointment for the time being must be sanctioned by the Secretary of the Treasury.

I consider that a consul can personally attend to the business involved in \$4,000 a year of fees. This amount in full, however, would require close attention to duty. As I have stated, I suggest the allowance of a minimum of \$250 a year, which would be 15 per cent. on an excess of \$16.70 a year, and as the business increases above that sum, the force could be increased as the necessities of the service would require until the maximum of allowance, \$3,500, be reached. Under this plan, the following consulates would be entitled to an allowance for clerk hire, and to the sums for the year below stated:

List of consulates or consular agencies of the United States returning fees for the year ended December 31, 1871, in excess of \$4,000.

Name of place.	Total fees.	Excess.	Allowance.
1. Berlin.....	\$8,872 00	\$4,872 00	\$730 80
2. Bordeaux.....	6,645 64	2,645 64	396 84
3. Brussels.....	6,425 00	2,425 00	363 75
4. Buenos Ayres.....	4,333 59	333 59	250 00
5. Calcutta.....	4,104 25	104 25	250 00

7. Clifton.....	4,161 50	161 50	250 00
8. Coaticook.....	6,122 00	2,122 00	318 30
9. Crefeld.....	4,075 00	75 00	250 00
10. Dresden.....	6,522 00	2,522 00	378 30
11. Dundee.....	7,052 89	3,052 89	457 93

List of consulates or consular agencies returning fees, &c.—Continued.

Name of place.	Total fees.	Excess.	Allowance.
12. Glasgow.....	\$12,410 75	\$8,410 75	\$1,261 51
13. Hamburg.....	8,028 29	4,028 29	604 24
14. Hamilton.....	4,790 50	790 50	250 00
15. Havre.....	4,162 12	162 12	250 00
16. Hong-Kong.....	6,172 82	2,172 82	325 92
17. Honolulu.....	4,925 15	925 15	250 00
18. Huddersfield.....	4,297 50	297 50	250 00
19. Kanagawa.....	6,128 38	2,128 38	319 45
20. Leipsic.....	7,882 25	3,882 25	582 23
21. Leith.....	4,077 31	77 31	250 00
22. Liverpool.....	40,646 00	36,646 00	3,500 00
23. London.....	56,850 56	52,850 56	3,500 00
24. Lyons.....	8,446 50	4,446 50	666 97
25. Manchester.....	31,484 50	27,484 50	3,500 00
26. Montreal.....	6,614 07	2,614 07	392 11
27. Nottingham.....	5,554 75	1,554 75	250 00
28. Paris.....	35,309 75	31,309 75	3,500 00
29. Rio de Janeiro.....	5,031 73	1,031 73	250 00
30. Shanghai.....	9,839 85	5,839 85	875 97
31. Sheffield.....	9,252 75	5,252 75	787 91
32. St. John, (New Brunswick).....	6,477 58	2,477 88	371 68
33. St. John's, (Quebec).....	4,008 00	8 00	250 00
34. Toronto.....	4,788 50	788 50	250 00
35. Tunstall.....	8,912 58	4,912 58	736 88
36. Vienna.....	6,556 25	2,556 25	384 43
37. Zurich.....	4,979 70	979 50	250 00
Total.....			28,375 00

Minimum rate \$250 a year for all excesses of fees up to \$1,670. Maximum rate \$3,500 a year from \$23,333.50 and upward.

As will be perceived by the above statement, the cost of, say, eighty-one clerks at thirty-seven consulates, with fees ranging from \$4,000 to \$56,000, is but \$28,375 under the proposed system, against ten clerks at six consulates, at a cost of \$10,000 under the present. By the proposed system the average rate of compensation per clerk would be about \$350 a year instead of an average of \$1,000 a year. Thus, for three times the present expenditure, the Government secures eight times the number of clerks.

The bill further provides for the discontinuance of allowances when the fees fall below the minimum.

The following table gives a comparative view of the consular service of the United States with several of the European nations, as represented at five foreign ports:

Place and country.	Rank.	Staff.	Salaries.	Allowances.
Hamburg:				
United States of America..	Consul.....	Vice-consul.....	\$2,000 00	\$200, rent.
Great Britain.....	do.....	do.....	3,872 00	\$1,616.56, rent and office expenses.
France.....	Consul-general..	Chancellor and two clerks.	7,937 60	Actual expenses.
Brazil.....	do.....		2,178 00	\$290 and fees.
Havre:				
United States of America..	Consul.....	Vice-consul.....	6,000 00	\$600, rent.
Great Britain.....	do.....	Vice-consul and cl'k.	4,128 68	\$1,452.
Honolulu:				
United States of America..	do.....	Vice-consul.....	4,000 00	\$400, rent.
Great Britain.....	Consul-general..		5,324 00	\$1,936.
Paris:				
United States of America..	do.....	Vice-consul-general and three clerks.	8,000 00	\$1,200, about.
Great Britain.....	Consul.....		484 00	\$968.
Italy.....	Consul-general..	Vice-consul.....	5,517 66	Certain part of fees.
Rio de Janeiro:				
United States of America..	Consul.....	do.....	6,000 00	\$600, rent.
France.....	do.....		6,060 00	\$1,539.12, rent and other expenses.
Italy.....	do.....	Vice-consul.....	6,853 44	\$2,323.20.
Great Britain.....	do.....		4,840 00	\$3,872.

The same proportion exists very generally in European and South American countries. In Asiatic countries the United States consular officers do not compare so advantageously with respect to salaries, and are emphatically worse off as regards allowances. My communications from Japan and China alluded to the dire extremities of our consular officers at times from insufficiency of allowances for rent and office expenses, and the consequent drain upon their salaries.

FEED CONSULS.

The appended bill also contemplates the abolition of that class of consuls paid out of the fees, and for two reasons. The first is, that at a place where the business is important, there should be a full and principal officer; and where it is not, there should be an officer subordinate to some principal. Where the fees are important, the consuls are usually citizens of the United States; but where they are inadequate to support an officer sent out, the consuls are subjects of a foreign state, independent of the supervision of an American officer in the country, and at liberty to use their office as they may see fit.

By referring to the official register of consular officers, it will be seen that consulates have been established at places where there is not the slightest apparent reason for their presence. I regret to feel compelled to state that these officers, though personally highly creditable to their own nationality, are not always equally so with respect to their assumed official character. I will mention one instance to suffice for all. At a certain city in Europe there resided a merchant of wealth who found difficulty in gratifying his aspirations for more consideration than was paid him in his private capacity. Through the assistance of an American official he secured the appointment of American consul at his city. There were no American interests there, but the object of the merchant was accomplished. He was no longer simply *monsieur*, but *monsieur le consul Américain*. He could wear the American arms over his office, and emblazon the national escutcheon on the panels of his coach.

Taking everything into consideration, it will be admitted this is cheap notoriety. I regret to state that the cheapest part of the whole transaction was certainly the commission which he could so easily secure.

I may add that I was informed that the official subsequently received periodical and acceptable donations of wines from the bounty of the grateful recipient of consular honors.

Again, this grade of officer is abused by the appointment of naturalized citizens of the United States as consuls to the countries from which they emigrated. As is well known, many have sought refuge on our shores who, in the cause of freedom at the places of their birth, have found a land of adoption more agreeable than the land of their nativity. It is not necessary for me to single out instances of this nature; I merely wish to call attention to the fact that consulates have been created for this class of persons, and the greater portion of their duty seems to have been a degree of disgusting arrogance, offensive to the government tolerating their official presence, and not creditable to the government which sent them.

In order that I may not be misunderstood, I will add that some of the most distinguished consuls in our service are citizens by adoption. My remarks refer not to these, but to those not in the class of paid, and hence full and principal consuls.

I might adduce other instances of the same nature. I merely state these that it may be understood why, in my opinion, all consular officers should be salaried, and those receiving fees should be subordinates.

TEMPORARY CONSULS.

Under the present consular system I find a class of officers termed commercial agents. These are only known to the consular service of the United States. I look upon this grade or class of officers as a sort of unnecessary appendage, and which could well be dispensed with. Indeed I look upon it as a positive disadvantage to the service. Section XLV of the annexed bill provides for the appointment of temporary consuls at places where there is a demand for consular officers, and regulates how the same shall be disposed of when there is no longer any need of their services. This arrangement will bring all consular officers under one general classification.

One great need of the present service is a convenient method of establishing new consulates when necessary, and of abolition when there exist no longer any sufficient reasons for the continuance of those already created.

APPOINTMENTS, EXAMINATIONS, AND PROMOTIONS.

One of the leading causes of the questionable average standard of the consular service of the United States, I have found to be the general lack of ordinary scholarly attainments among its officers. To prevent such persons from securing appointments in the future, the bill provides not only for the examination of candidates, but makes this examination a necessary antecedent to an appointment into the service, prescribes how these examinations shall be conducted, designates the age and qualifications of candidates, defines how promotions shall be made, designates the course to be pursued in the commencement of the act, in order to secure a fair distribution of consular officers among the States of the Union, &c.

By the plan of promotions proposed the service will always have in it a certain proportion of experienced officers. This system I consider next best to a permanent service with the tenure of office during good behavior. (See Sections XLVI, XLVII, XLVIII, XLIX, and L.)

EXPENSE OF REMOVALS.

In addition to the disadvantages of the existing mode of appointment to the consular office by filling it frequently with unsuitable persons, I have found that frequent removals greatly increase the expense of the service. Officers, though not allowed transportation or living *en route* to their posts of duty, receive thirty days' salary while receiving instructions and salary in transit; meanwhile the consul in office receives pay until his successor arrives and takes possession. These frequent removals and appointments have, ever since the payment of salaries to consular officers, been a source of unnecessary expense to the Government. This amount, if added to the present rate of pay, would almost be sufficient to meet the extra outlay necessary to suitable pay and allowances. I will take the fiscal years of 1870 and 1871 in order to illustrate this statement. This amount, proportionately, is a fair average, and, in my opinion, matters will grow worse if provision be not made to relieve the Government from the importunities of persons desirous of appointments in the consular service, making merit, and not politics, the gauge of preferment.

Approximation of annual cost of removals and new appointments to the consular service of the United States, 1870.

Cost of fixed salaries	\$346,500 00
Cost of full salaries (\$2,500) feed to consuls	21,000 00
Cost of ten consular clerks	10,000 00
Cost of marshals, &c	10,000 00
Total	<u>387,500 00</u>
Total amount allowed for salaries during the fiscal year ended June 30, 1870	\$451,030 38
Total amount expended as above	<u>387,500 00</u>
Approximate cost of removals for 1870	<u>63,530 38</u>

Taking the same estimate for 1872, (salaries \$475,861.95,) I find the cost \$88,361.95. I think it would not be too much to estimate the yearly loss hitherto sustained from this cause at \$50,000, and this in addition to the demoralizing tendency of these frequent changes.

CONSULAR SUPERVISORY JURISDICTIONS.

In order to have a responsible superior officer in the country, the following bill contemplates the creation of defined supervisory jurisdictions under the direction of consuls-general. These officers will stand between the Government at home and the consuls abroad.

They are also made the channels of communication with the home Bureau.

By thus having all accounts and communications pass under the inspection of a superior officer, the Government will find itself constantly in possession of trustworthy and authenticated intelligence of the working of the service. It will also be observed by reference to the bill that these supervisory officers have no authority to interfere in the business of consulates other than their own. Their privilege is merely the right to receive and inspect accounts and reports sent to them, and their duty to address the Secretary of the Treasury respecting their views relative to such accounts and reports, and upon the character of the service and its officers within their respective jurisdictions, and for which they will be held responsible. Many of the discreditable acts of consuls have long gone without notice for want of some intermediate officer to execute promptly the orders of the Government. (Sections LXII, LXIII, and LXIV.)

CONSULAR FEES.

My communications relative to the condition of the accounts of consular officers must have suggested to you the negligence which has characterized the service in this respect. At every consulate I found, since its establishment, more or less disorder in the accounts of fees. At some places I found wide gaps which I took to be evidence that the consul kept no account at all, and in all probability appropriated the fees. Occasionally these important accounts were kept in lead pencil. I do not believe at all the consulates examined by me I found a half dozen, indeed I might say a single complete set of fee-books or fee-accounts, beginning at 1856. The causes which might lead to such an extraordinary state of affairs may easily be imagined. Besides fees accounted for, I heard complaints of overcharge of fees, past and present. Nor did I find a half dozen consular offices in which a table of consular fees was posted in a convenient place for the benefit of persons

having business with the consulate. On this subject I have been careful to embrace in the following bill provisions to meet all the requirements of this branch of the consular business, at least so far as I have been able to judge them. (Sections LXVI, LXVII, LXVIII, LXIX, LXX, LXXI, LXXII, and LXXIII.)

REMAINING FEATURES OF CHAPTER THE SECOND.

The remaining sections of this portion (chapter the second) of the appended bill, relate to the compensation of unclassified consular officers, &c., to the general powers, duties, responsibilities, and accountability of officers, settlement of consular jurisdictions, incidental duties of officers with respect to documents and ships, the enforcement of the laws of the United States, especially in the use of the American flag to cover illicit trade in certain countries, the custody, conveyance home, and punishment of offenders, and for the punishment of consular officers guilty of unofficial conduct. (Section LI to LXI and LXV and LXXV to CI.)

HOSPITAL DUES.

I should perhaps make a particular statement with regard to the subject of hospital dues. By act of Congress a certain amount monthly is deducted from the pay of each seaman, a citizen of the United States, for the benefit of the fund for the relief of sick and disabled American seamen, (act approved June 29, 1870.) These dues, however, are payable in the United States upon the return of the vessel to the United States. The framer of the bill was probably not aware that American ships frequently remain abroad for some years. It so happens, as a rule, that the papers of these ships are lost, or for some other reason they are not produced when wanted, and the Government falls short of its legal dues, except, perhaps, on the last crew, which amount could not very easily be evaded.

In my communications at different times, I have explained this by giving cases in which the same has occurred. I will mention but one instance here. The ship *Leucothea* was sold at Amsterdam, in June, 1872. When called upon for shipping-articles and other necessary papers, could only produce from March 12, 1871. Twenty-one sailors, at 40 cents a month, made \$126; this the consul collected, and, approximating the balance for five or six years, the time which had elapsed since the ship's departure from the United States, collected the whole. This was the case of a vessel sold abroad. In all other instances, the collections are made in the United States. On the west coast of South America, I learned of vessels which had been engaged in trade between foreign ports for fifteen years without returning to the United States. The appended bill corrects this by an amendment to the section of the act authorizing the collection of these dues. (See Section LXXIX of the appended bill.)

I have no doubt the Government loses large sums in this manner. Under the proposed system, it will be seen that collections will be made yearly by collectors or consuls wherever the vessel may first arrive after the 1st day of January of each year.

THE PROTECTION AND RELIEF OF AMERICAN SEAMEN ABROAD.

The third chapter of the appended bill takes up the important subject of the reciprocal duties of consular officers of the United States and

masters of American ships, and the relief of destitute American seamen at foreign ports or places.

Perhaps no portion of the consular duties has been more faithlessly performed than the granting of relief to destitute American seamen, at foreign ports, out of the fund for that purpose. My communications on that subject gave ample details. For these I would refer to my report of May 22, 1872, page 142 to 157, especially concerning the relief accounts on the west coast of South America.

It is not necessary to repeat these facts here. In the beginning of this report I have given a synopsis of information under this head sufficient to answer my present purposes. I am convinced that this same conduct, to a greater or less degree, according to circumstances, will continue unless some change be made to insure more thorough accountability. It is true the amounts expended are less now than ever before. In 1860 they were over three times as much. Notwithstanding this, the Government is still taxed over \$30,000 during the fiscal year of 1871 to make up the excess of disbursements over receipts. The Government would certainly not desire to have a revenue from this source, but there is no reason why the receipts and disbursements should not be nearer equal. I have not the least doubt, if the laws were rigidly enforced, and honestly and economically, that is judiciously administered, that there would be a smaller annual deficit to be made up. When it is borne in mind, however, that in 1860 the excess of disbursements over receipts was \$175,062.34, and in 1871 \$31,583.02, it must be admitted that there has been considerable improvement since. I do not consider the collection of extra wages, even if the Government and seamen in every case received the full benefit, as an equitable plan of meeting the necessities of the relief measures provided by law. I am of the opinion that it is an unjust tax upon American shipping. It is the cause, directly or indirectly, of a majority of the difficulties between the master and seamen, and it is most certainly a fruitful source of speculation for dishonest consular officers.

The difficulty of reaching seamen in order to verify accounts, renders it practically impossible to ascertain their regularity or irregularity. I experienced this inconvenience during my own investigations. I was frequently astonished at the evidence of the utmost temerity of consular officers in their transactions connected with the relief fund. It is not necessary for me to repeat what I have already narrated in my communications and reports, as to the means resorted to to this end. I also feel convinced that out of the sums accounted for, considerable amounts have been obtained through fraudulent vouchers. It would be almost impossible to learn the truth, yet I am of the opinion that not insignificant sums are collected and not accounted for at all. For instance, the three months' extra wages, fifty to sixty dollars, and the seaman's wages are collected, and relief given in a meager way, or not at all, or at the expense of the Government. The seaman is then shipped. The Government's one month's extra wages and the seaman's two months' extra wages, and hard-earned wages, are wholly or mostly consumed in collusion with the boarding and shipping masters. These are the transactions of which the Government knows nothing, and has no means of learning. Perhaps a small account of relief is submitted for appearances. Where there is little or no shipping, and hence no extra wages, they resort to the practice of returning large relief bills, which they collect by means of fraudulent vouchers. This I believe to have been a common practice on the west coast of South America for the last twenty-five years.

Before stating the plan which I have to propose to remedy these evils, I wish to give from official sources the number of American ships cleared for foreign countries, and the disbursements for relief and receipts of extra wages for the same period. I may state that the year here employed is the most favorable of any since 1860, and I might say since the establishment of the present service.

Statement exhibiting the number of American vessels, with their tonnage and crews, cleared from the United States for foreign countries, and the amount of disbursements for relief, and receipts of extra wages, for the year ended June 30, 1871. (Compiled from the annual report of the Chief of the Bureau of Statistics for 1871, and from the report of the Fifth Auditor of the Treasury.)

Total	10,573	3,741,945	105,605	61,429 29	30,729 58	

Without comment I desire to call your attention to the disbursements and receipts on account of relief of destitute American seamen in the several countries or portions of the globe above mentioned. A comparison indicates a marked disproportion in several cases. For instance, let me compare Peru and Chili with England :

	Vessels.	Tons.	Seamen.	Disbursed.	Received.
Peru	30	33,655	600	\$8,298 26	\$2,948 59
Chili	30	9,328	194	7,313 19	1,930 83
England and Wales	451	482,644	8,841	3,224 16	4,354 10

In the detail of this expenditure we find the following :

Peru.—Callao, \$3,864.12 disbursed; \$2,408.59 received. Payta,

\$4,229.89 disbursed; \$440 received. Tumbez, \$204.25 disbursed; \$100 received. For 1870, the year before my visit to the consulate at Tumbez, and before an officer of intemperate habits, and consequent inability to keep the accounts, had arrived, Tumbez returned \$3,646.12 disbursed, \$481 received, and the second quarter not received. This would seem to be one instance, at least, in which intemperance might be construed as an advantage. Such a sudden and astonishing difference certainly does not speak well for previous accounts.

Chili.—Talcahuano, \$5,829.72 disbursed; \$1,439 received. Valparaiso, \$1,483.57 disbursed; \$491.83 received.

England and Wales.—Liverpool, \$2,116.03 disbursed; \$3,973.55 received; and the balance, \$1,108.13 disbursed, and \$380.50 received, at Bradford, Bristol, Cardiff, Falmouth, London, Manchester, Newcastle-on-Tyne, Sheffield, and Southampton.

I would also call your attention to line number 36, Spain, in the above table. Of the amounts for that country, \$2,919.21 disbursed, and \$135 received, stand against Malaga. Line number 42, under Azores, &c.; the amount of \$2,486.06 was disbursed and \$602.09 received at Fayal. This I find to be a sudden decline. During the preceding year (1870) the amounts at the same place were \$8,353.63 disbursed and \$1,368 received. The extraordinary and disproportionate sums expended at the above places, as compared with our commerce, has frequently been a subject of considerable though idle complaint from the officers of your Department. Nor have I been backward in expressing my opinion. It is gratifying to say that there has been some improvement of late.

CAUSE OF THE IRREGULARITIES IN RELIEF ACCOUNTS.

The principal defect in the mode of transacting this branch of the consular duties is the want of a perfected system of accountability. I consider the solitary sending of an account in such a form with vouchers in such a form is the least reliable evidence the Government could have of an expenditure, if an officer were disposed to be dishonest. This, however, will be found to constitute the main stay and support of the Government in its management and control of disbursements from the relief fund. In addition to this, the laws are inexplicit, and in my opinion too much discretion is allowed, or at least assumed by consular officers. I can easily comprehend the consequences of a reliance upon the discretion of some persons who have secured places in the consular service. The imbecility of the existing plan of relief, and the unjust, unequal, and, in most cases, extortionate tax put upon American commerce to meet in whole or in part the demands upon the relief fund, was one of the first features of the service which attracted my attention. The more I investigated, the stronger were my convictions of the utter irresponsibility and expense of the system. I found that the authority given to consular officers to collect extra wages was not only an unusually harsh measure, but it did not even in a satisfactory way carry out the humane spirit and intentions of the law. It gives an officer a weapon against masters of American ships which could be, and has, I am aware, been seriously misused. It gives the seaman a field for profitable mutinous or disorderly conduct. All sorts of complaints have been made by seamen against masters, and the ships have been mulcted to the amount of the seamen's wages and extra wages, to the profit of the seamen.

There is a class of unprincipled men known as "sea-lawyers," whose

chief vocation is to excite and encourage seamen to disorder, so as to bring on a conflict with the master, and then demand a discharge and extra wages. Not inconsiderable sums have thus been extracted from the money-chest of the ship.

But it is unnecessary for me to consume more of your time with these matters. The present law was unquestionably passed in the right spirit. Its object was to protect seamen thrown upon a foreign shore helpless and destitute.

This may occur in several ways. By shipwreck, by the conduct of the master, or by voluntary or forced desertion. In order to correct these abuses, I propose, as the first measure of reform, the repeal of all existing laws authorizing the collection of extra wages and disbursements on account of relief of destitute American seamen. In their place I present a system of relief dues on the tonnage of vessels to meet the wants of a fund for the purpose. The conditions of the disbursement of this fund are also stated.

With this object in view the appended bill (Sections CII to CXXXIV included) provides for the repeal of all acts inconsistent with the present act. The superintendent of the consular service and consular officers are specially charged with the duty of carrying out all acts relating to seamen. Seamen's wages are required to be paid when an American ship is sold abroad, and further provisions are made for the proper use of a portion of these wages for the benefit of the seaman; thus putting an end to the squandering of all his money. It constantly happens that a seaman, after getting hold of his wages, indulges in a round of riot and debauchery. After a short time, robbed and beaten, he becomes destitute and falls upon the Government for relief. I am not of the opinion that the laws contemplate any such a use of seamen's wages, and I consider that it is neither just nor desirable that the Government or the ship should make up deficiencies brought about by such wanton extravagance. The section, therefore, relating to this particular subject requires that the seaman, when able, shall share in the expense of relief.

PROPOSED PLAN FOR A RELIEF FUND.

The bill next provides that relief dues to the amount of one-half of a cent per ton of registered tonnage shall be charged and collected by consular officers of the United States upon all American ships entering the ports of their respective consular districts. These dues are made to take the place of extra wages.

The advantages of the proposed plan, in my mind, are clear. We have first a record of the entry of the ship. This the Government can know from other sources independent of the consulate, that is, through the customs at home upon clearance, or from the ship's papers deposited with the collector upon her return. In the case of extra wages, there were exceptions to the portion of the law which required them to be collected. As I have shown in my communications there have undoubtedly been officers who, for a consideration, hardly from good will, have released the ship from the payment of extra wages, noting desertion or some other plausible reason for their abatement, on the agreement and ship's papers. Ultimately, notwithstanding this, the Government is charged with the relief of these same seamen. By the plan proposed there is no opportunity for such irregularity, for every vessel, without exception, is required to pay these dues, and, if not collected or accounted for, the amount is required to be deducted from the consular officer's pay, and the officer himself dismissed the service.

In addition to this means of becoming cognizant of the conduct of consular officers, independent of any action he might wish to take in order to cover his conduct, the Government has also the consul's returns of arrivals and departures of American ships at the ports in his district, which must correspond, as far as consistent, with the returns from other consulates, if the ship touched at other ports, or with the records of the collector of customs at the home-port.

We also have the consul's returns of ships' fees, which must bear a certain proportion to his account for relief dues. There are also other checks which can be enforced under the direction of a vigilant superintendent of the consular service.

I think, without doubt, that the Government, by the proposed plan, would secure a larger per cent. if not the entire amount of the relief dues.

After a careful computation of the disbursements of the past, and considering the possibility of a certain degree of irregularity at times, until the unfaithful officer is discovered, and also taking into mind the extent and growing importance of American commerce, I have fixed the amount of tax, to be known as "relief dues," at one-half of a cent per ton of registered tonnage. I am confident that this rate will meet the demands of our destitute seamen under an efficient administration of the law.

THE EFFECT OF THE PROPOSED PLAN.

By a little comparison of amounts it will be found that the tax on our shipping will be less for the fact of bearing proportionately upon all vessels. For instance, a ship of one thousand tons entering a foreign port on an average twice a year, would pay \$10 in relief dues. Those making longer or shorter voyages would pay less or more. If either of these ships would discharge one seaman in the course of the year, and were the wages (extra) collected according to law, the ship would be obliged to pay from \$45 to \$60 in addition to wages, (ordinary,) or \$15 to \$20 a month. That is a sum equal to four and a half to six or nine to twelve years, respectively, of relief dues. As a result an average discharge, in a foreign port, of one seaman a year would involve the ship in an expense, in extra wages, to the amount of time and money stated.

On the contrary, if the wages were not collected for any reason whatever, right or wrong, the Government would be at an expense without any income at all. We know that all American ships, either from favoritism, the exceptions of the law, or from some other cause, do not pay extra wages when a seaman is discharged. I am not aware, however, that the same exceptions are made in extending relief to the seamen of these ships. In brief, all ships do not pay into the relief fund; but all American seamen are entitled to relief. It will be seen that the proposed system bears upon all vessels according to their tonnage. They are also relieved of the petty annoyances of seamen on the one hand and the exactions of the Government on the other.

I have also always thought it very severe upon our shipping to require extra wages, in addition to earned wages, to be paid to each and every seaman on board an American vessel sold abroad. There are also other cases in which it would be unjust to require the Government to bear the expense of relief where the ship should be responsible for the relief and sending home of the men. These special cases and others are provided for in the portion of the appended bill now under consideration.

COMPARISON OF DISBURSEMENTS AND TONNAGE.

I will insert here several statistical lists, which will show the receipts and disbursements on account of the relief of destitute American seamen, and the number of American vessels, tonnage, and crews cleared and entered from the American seaports and lake-ports for the correspondng years.

The following table will show the aggregate of disbursements and receipts from 1860 to 1870 on account of relief of destitute American seamen:

Receipts and disbursements on account of relief of destitute American seamen.

For the fiscal year ended June 30—	Disbursed.	Loss in exchange.	Total.	Receipts of extra wages and other moneys on account of destitute seamen.	Amounts refunded citizens, seamen, or their represent- atives directly from the Treasury, the amounts having been previously received at the consulates.	Excess of disbursements over receipts.	Excess of receipts over dis- bursements.

Allowances out of funds of seamen as balance of extra wages or arrears due estates of deceased seamen, \$502.42, to June 30, 1862.

Allowed seamen picked up at sea, \$11,896.36, to June 30, 1862.

The amount of \$2,039.51 was also disbursed during the year 1863 for relief of seamen by others than consular officers.

* For the year 1861 an additional amount of \$7,788.75 was expended for the relief of destitute American seamen, by authority of a special act.

† Net.

A statement exhibiting the number of American vessels, with their tonnage and crews, cleared from and entered into the ports of the United States, engaged in the foreign trade, from 1860 to 1870, compiled from the monthly report (April, 1872) of the Chief of the Bureau of Statistics of the Treasury Department.

STATEMENT OF AVERAGES.

From the statistical tables above given I have been able to compute the averages for a series of years relating to the number of seamen per ton or tons, per vessel, and average cost of relief tax upon vessels, &c., and also the results of the proposed plan.

AVERAGE OF SEAMEN TO TONS.

1851 to 1860, (10 years.)	Annual average....	{ Entered, 1 seaman to every 29+tons. Cleared, 1 seaman to every 29+tons.
1861 to 1870, (10 years.)	Annual average....	{ Entered, 1 seaman to every 32+tons. Cleared, 1 seaman to every 33+tons.
1870 to 1871, (1 year.)	Annual average....	{ Entered, 1 seaman to every 34+tons. Cleared, 1 seaman to every 35+tons.

AVERAGE OF SEAMEN TO VESSELS.

1851 to 1860, (10 years.)	Average of seamen to each vessel...	{ Entered, 14—seamen. Cleared, 14—seamen.
1861 to 1870, (10 years.)	Average of seamen to each vessel...	{ Entered, 12+seamen. Cleared, 12+seamen.
1870 to 1871, (1 year.)	Average of seamen to each vessel	{ Entered, 10+seamen. Cleared, 10—seamen.

1861.—Total cleared, sea-ports and lake-ports: vessels, 12,682; tons, 6,165,924; crews, 180,745.

Total disbursed for relief of seamen, as per accounts.....	\$220,982 69
Average cost of relief per seaman.....	1 22½
Average cost of relief per vessel	17 42½+
Average cost of relief per ton	3½—
Total received for extra wages, &c	45,920 35
Proportion of receipts compared with disbursements, 20 per cent.	
Average receipts per vessel.....	3 62
Excess of disbursements and moneys refunded.....	175,062 34

Proposed plan.—Relief dues one-half of a cent per ton on 5,921,281 registered tonnage, average two entries a year at a foreign port, \$59,212.81.

1865.—Total cleared, sea-ports and lake-ports: vessels, 8,434; tons, 3,025,134; crews, 100,867.

Total disbursed for relief of seamen, as per account.....	\$153,060 88
Average cost of relief per seaman.....	1 51½+
Average cost of relief per vessel	18 11 +
Average cost of relief per ton.....	5½—
Total received from extra wages, &c	83,446 91
Proportion of receipts compared with disbursements, 55 per cent.	
Average receipts per vessel	9 89+
Excess of disbursements and moneys refunded.....	69,613 97

Proposed plan.—Relief dues of one-half of a cent per ton on 3,025,134 registered tonnage, average two entries per year at foreign ports, \$30,251.34.

1870.—Total cleared, sea-ports and lake-ports: vessels, 10,489; tons, 3,503,929; crews, 102,229.

Total disbursed for relief of seamen, as per accounts	\$31,503 61
Average cost of relief per seaman	79 $\frac{3}{4}$ —
Average cost of relief per vessel	7 77 +
Average cost of relief per ton	2 +
Total received from extra wages, &c.	39,038 33
Proportion of receipts compared with disbursements, 90 per cent.	
Average receipts per vessel	3 72 +
Excess of disbursements and moneys refunded	42,470 28

Proposed plan.—Relief dues of one-half of a cent per ton on 3,503,929 registered tonnage, average two entries per year at foreign ports, \$35,069.29.

1871.—Total cleared, sea-ports and lake-ports: vessels, 10,573; tons, 3,746,945; crews, 105,605.

Total disbursed for relief of seamen, as per accounts	\$32,312 60
Average cost of relief per seaman	59 +
Average cost of relief per vessel	5 89 +
Average cost of relief per ton	1 $\frac{3}{4}$ +
Total received for extra wages, &c.	30,729 58
Proportion of receipts compared with disbursements, 50 per cent.	
Average receipts per vessel	2 90 +
Excess of disbursements and moneys refunded	31,583 02

Proposed plan.—Relief dues of one-half of a cent per ton on 3,746,945 registered tonnage, average two entries per year at foreign ports, \$37,469.45.

These figures, from official sources, need no comment. The inefficiency of the service was probably at its height in 1860. For 1865 there was considerable expenditure in proportion to the number of vessels, tonnage, and crews. This may be accounted for as the results of depredations of privateers. In 1870 and 1871 these figures take a more flattering turn, and indicate a more accountable administration of the laws. Appended to these exhibits is an estimate of return of relief dues according to tonnage and an average of two entries a year at a foreign port. With the special cases hereinafter enumerated, in which the ship is required to bear part or all of the expense of relief and passage home, I am of the opinion that the relief dues can even be reduced to a lower rate than that proposed.

ON THE GRANTING OF RELIEF.

The succeeding sections designate how, when, and to what extent relief shall be granted to destitute American seamen. In a general way the bill authorizes consular officers to extend relief to all seamen, citizens of the United States, who may be found in a destitute condition in their consulates or consular districts.

This relief, with certain modifications, is also allowed to seamen, citizens of the United States, arriving on vessels other than American. In order to prevent abuses, or, at least, to discover the same, the Secretary of the Treasury is authorized to require information from collectors of customs in the United States, and may appoint a secret agent to act within the United States, under the especial direction of the superintendent of the consular service, for the purpose of investigating ships' papers in custom-houses, or visiting the shipping and seamen, with a view to hearing or investigating complaints. Consular officers are required to see that agreements are complied with. Returns are required to be made in case a ship is lost or sold abroad. No seamen can be legally discharged abroad, nor be left behind, without the sanction

of the consul, and a violation of this is punished with a penalty. If any of the crew of any American ship be left behind, the proof of sanction or authority is put upon the master, and failing to produce satisfactory proof, the whole expense of relief must be charged against the ship, and collected from the owner. On the discharge of seamen abroad by sale of ships or otherwise, certificates of discharge must be given, and the seamen sent home. In the case of sale, the master must pay the seamen's wages in full, and provide them with passage home, or deposit with the consul a sum per man equal to the Government rate of allowance for that purpose. Forcing a seaman on shore, a common occurrence at present, to avoid extra wages, and accomplished in collusion with the consular officer, who certifies the men as deserters, is made a misdemeanor.

The vessel pays the same dues under any and all circumstances. The amount in this case of relief is chargeable against the ship. There would be little or no inducement to the consul to violate his trust. There would be no forty to sixty dollars a man extra wages to be charged or abated, according to circumstances. The consul would hardly find it now worth the risk. But allowing, for a smaller consideration, the expense of relief, in this instance, was charged to the Government instead of the ship, a vigilant use of the secret agent at home would sooner or later discover sufficient evidence to warrant the dismissal of the officer. Extra wages, like high customs or internal duties, instead of increasing the revenue, act in the opposite extreme, and often become a corrupting fund.

The bill further provides that seamen, when allowed to be left behind, must be paid their wages, and prescribes how the said wages shall be disposed of. Such wages must be treated as money due to seamen. The bill next explains in relation to the discharge of seamen at foreign ports; that destitute seamen are to be sent home, and how; that reasonable compensation may be paid where there is no consular officer; the Government may sue for the amount advanced for the relief of seamen left abroad; masters are required to seek the services of consular officers; it is the duty of a master, upon arriving in a foreign port, to deposit his papers with the consular officer of the United States, and the same with respect to the agreement abroad, and at home with the collector of customs; seamen engaged in a foreign port must be shipped with the sanction and in the presence of the consul; proceedings in the shipment of seamen are defined; consuls are empowered to require the production of agreement, muster-rolls, &c.; seamen must be allowed to go ashore to make complaints to a consular officer; forfeiture for frivolous complaint; masters and seamen can make complaints to consuls, and providing for the appointment of inspectors; consular officers are required to enforce the laws of the United States relating to discipline on American ships; consular officers required to reclaim deserters and to inquire into the cause of desertions. The bill further explains the course to be pursued respecting desertions, and prescribes the penalty for neglect of duty.

For details concerning the above provisions, I would respectfully call your attention to Sections CII to CXXXIV, inclusive.

RELATING TO INVOICES.

The fourth chapter of the appended bill is devoted exclusively to the important subject of the verification and authentication of invoices and the duties of consular officers of the United States therein. This por-

tion of the bill begins by repealing the acts inconsistent with this, the terms used are defined, and persons declaring to the invoice are required to be the persons named therein.

VERIFICATION OF INVOICES.

The verification of invoices by the present laws requires an oath before a consular officer. Like the collection of extra wages, this oath is at some consulates a medium of unjust exactions. I now allude to the additional charge for administering the oath of verification by a person known as a commissioner. This applies to the verification of invoices in the British Isles. I am informed that English laws do not permit a consular officer to administer an oath, and, in the absence of any consular convention to authorize these officers to perform this duty, a person having an invoice to be verified must first take oath before a commissioner, who inflicts a charge of from 60 cents to \$1.50. In addition to this, the fee of \$2.50 is also charged and collected by the consul and accounted for to the Government.

STATEMENT OF COMMISSIONERS' FEES.

Before going further, I will here give an approximation of the amount of these commissioners' fees:

Commissioners' fees collected in the British Isles for the fiscal year ended June 30, 1872.

Consulate.	Number of invoices.	Commissioners' fees.		Total of commissioners' fees.	Total Government fees.	Remarks.
		s.	d.			
1. Belfast	4,775	2	6	\$0 60	\$2,865 00	\$11,937 50 1871.
2. Birmingham	4,847	2	6	60	2,908 20	12,117 50
3. Bradford	7,795	2	6	60	4,677 00	19,487 50

8. Dundee	2,883	2	6	60	1,729 80	7,207 50
9. Falmouth	50	2	6	60	30 00	125 00 Approximation.
10. Glasgow	4,671	2	6	60	2,802 60	11,677 50
11. Leeds	1,000	6	0	1 45	1,450 00	2,500 00 Approximation.
12. Leith	1,100	2	6	60	660 00	2,750 00 Approximation.
13. Liverpool	10,768	2	4	56	6,030 08	26,920 00 1871.
14. London	19,845	2	6	60	11,907 00	49,612 50
15. Londonderry	100	2	6	60	60 00	250 00 1871. Approximation.
16. Manchester	13,297	3	0	72	9,573 84	33,242 50
17. Newcastle-on-Tyne	75	2	6	60	45 00	187 50
18. Plymouth						
19. Sheffield	3,550	2	6	60	2,130 00	8,875 00 1871. Approximation.
20. Southampton	100	2	6	60	60 00	250 00 1871. Approximation.
21. Tunstall	3,550	2	6	60	2,130 00	8,875 00 1871. Approximation.
Total	80,859				50,654 29	202,147 50

By the above table it will be seen that the large sum of \$50,654.29 is paid, by the parties shipping goods to the United States, to a class of men not even citizens of the United States. This sum is ultimately paid by the American consumer.

At the principal consulates it will be seen that these fees aggregate as high as \$11,907. I am aware of the fact that in most cases the commissioner is the vice-consul, or a special commissioner is employed to administer these oaths. At London, Manchester, and Bradford, these

fees largely exceed the salaries of the officers, and at Liverpool they amount to nearly that sum. I must admit that I am not sufficiently credulous to believe that these large amounts go exclusively to the commissioners, and that the consul has no benefit or profit directly or indirectly therein. Presuming, however, that this view be incorrect, we would have the following figures:

London, consul's salary, \$7,500; commissioner's fees, \$11,907.

Manchester, consul's salary, \$3,000; commissioner's fees, \$9,573.84.

Bradford, commercial agent's salary, \$2,500; commissioner's fees, \$4,677.

Liverpool, consul's salary, \$7,500; commissioner's fees, \$6,030.08.

Allowing that 50 per cent. of these fees go to the commissioner, which would be a larger salary than the majority of our consular officers receive, we find a large sum unaccounted for. Under any and all circumstances I consider these commissioners' fees demoralizing in tendency, and a useless and unnecessary tax.

I am informed that several incipient efforts have been made looking to a consular convention between the United States and Great Britain, but that the negotiations culminated in no definite arrangement between the two countries.

There is an inconsistency also in this matter of oaths, which I have failed to have explained. In some cases I found that the consul administered the oath; for instance, in case of extended protest, or the oath of master to desertion, or to an American seaman for use in the United States, &c. This being the fact, I cannot see why officers should not administer the oath, if such were necessary to declaration.

Again, in the case of invoices, the document is entirely for use in the United States. If the document were for use in a British court the case might be different.

In order to put an end to this unnecessary expense, I propose, in the appended bill, the requirement of a simple declaration before a consular officer of the United States instead of an oath. In my opinion, any one who would make a false declaration with a view to defrauding the revenue would not stop short at an oath. The declaration, however, for the purposes of the act is stated to have the force and effect of the oath hitherto required. Nor does the oath put any more of a check upon the consular officer, for if he accedes to an undervaluation, it matters not to him whether verification is by oath or declaration alone.

A practice with some parties is to make out one set of invoices to pass through the consulate and custom-house, and another set, with the actual prices paid, to be sent to the persons receiving the goods in the United States. I am not aware that a simple oath administered by a commissioner, or any one else, will have any effect in correcting this evil.

In my opinion, there is a better plan to protect the revenue than the requirement of invoices, but invoices are good enough as far as they go, and they bring in a revenue to help defray the expense of the consular service. By doing away with the verification of invoices before a consular officer of the United States, at least three-fifths of the consulates could be dispensed with. The remainder, however, with the consular fees for services rendered to ships and authentication of signatures, &c., would pay but a share of the expense of those remaining.

As an offset to the oath required at the consulates on the British Isles, on the continent I find that a formal oath is not always asked for, but merely the signature of the party. I have not learned that the attempts to defraud the revenue are more frequent or more successful in the one case than the other.

In the appended bill I have embraced considerable detail, which I am of the opinion is necessary to insure greater accountability and efficiency in this branch of the consular business.

In order to enable you to form some idea of the confusion existing on the British Isles on this subject, I will take the liberty of quoting from some official correspondence. The proposition in this case is the proper place of invoice.

OFFICIAL CORRESPONDENCE IN REGARD TO THE PROPER PLACE OF INVOICE.

The first letter is from Consul-General Badeau, dated at London, December 2, 1870, and addressed to Mr. Reid, the deputy consul at Dundee, Scotland. He says:

In the case of a shipper doing business in Dundee, buying goods in Glasgow, and shipping them thence to New York, the invoice should be verified at Glasgow, if the shipper purchased them there in person. If he bought or ordered by letter from Dundee, then Dundee would be the place of shipment.

Mr. Jenkinson, consul at Glasgow, in a communication dated February 29, 1872, states the following case:

The facts are briefly as follows: An invoice was produced to me, by a gentleman residing in Glasgow, of goods made and shipped from Liverpool to the United States. I declined to certify it, because the regulations require that it should be done by the consul at Liverpool, who was the consul nearest to the place of shipment. The consul-general instructed me to grant my certificate in this and all like cases, at the same time referring to and indorsing a decision of the former Assistant Solicitor of the Treasury, whose interpretation of the law was that the place of shipment meant the place where the shipper resided, and from which he gave his order. The decision was contrary to the instructions from the State Department, and, as I thought, contrary to law, and would change my practice entirely.

The question was finally submitted to the State Department, and referred by that Department to the Treasury Department. The answer finally communicated to me by the consul-general was as follows, under date of March 15, 1871: That paragraph 463, in Consular Regulations, shall stand as it now reads. In regard to this last, the honorable Secretary of the Treasury remarks that it seems especially appropriate that the invoice should be certified by the consul, who has opportunities of seeing the goods and knowing their value. * * * I think that in your case there can be no doubt that the Department intends you to revert to your former practice.

In another communication from the consul-general at London, dated March 7, 1872, addressed to Mr. Robinson, consul at Leith, in answer to one received, I find the following on the subject of verification of invoices:

I have to say that this whole matter was referred by me to the State Department some months since, together with communications from various consuls and merchants on the subject, in addition to which various shippers addressed the Government direct. The State Department referred all these papers to the Treasury, and after long waiting the Treasury Department, in an elaborate document, a copy of which was forwarded to me for my governance, decided to sanction the verification of invoices under circumstances similar to those which you describe, on the ground, in certain cases, that the same house being, say, at Manchester, and branch houses elsewhere, trade would be facilitated by allowing the invoices to be certified at the place where the main establishment was situated, and adopting the rule laid down by the Assistant Solicitor of the Treasury in a formal opinion delivered by him to the State Department, September 17, 1866, in which he states that the place of shipment may mean the place where the goods are ordered. This decision of the Treasury was first made (since I have held my present office) in July last, and was a partial reversal of a previous one; but it was twice received in October, 1871, and may therefore be considered as a definite determination of the Department. I have, of course, acted in conformity with it, and sanctioned expressly the course pursued at Manchester. * * *

The rule itself is declared, and the examples of its application have been furnished with great exactness, it being expressly declared that the consular regulation on the subject is not to be inflexibly applied according to its most obvious meaning, but to be construed in accordance with the opinion of the Solicitor of the Treasury alluded to.

These communications convey several important facts which I have often found cause great embarrassment.

First. The difficulty of obtaining prompt instructions from the Government.

Secondly. The circumlocution necessary to secure proper instructions from the proper Department.

Thirdly. Unsatisfactory decisions by officers not specially charged with the administration of consular affairs, and hence not familiar with its peculiar wants. I will take the liberty of saying that I consider the decision alluded to as indefinite and calculated to disturb the mode of verifying invoices.

I will add as my opinion that exceptions to laws, consular, for the purpose of facilitating trade, are measures of doubtful wisdom, and are generally concessions under misapprehension, misstatement, or an exaggeration of circumstances. To permit goods to be invoiced where ordered, is equivalent to a nulification of all regulations on the subject under consideration. It is like setting law aside, and putting the consular service under the direction of agents of mercantile houses residing abroad.

There are other suggestive features of this correspondence which will suggest themselves upon perusal. These have appeared in my former report in connection with a practical application of my own experience. I presume it will be appreciated that a consular bureau as proposed would remedy much of the inconvenience alluded to.

PROPOSED RULES FOR VERIFICATION, ETC.

The appended bill defines in precise terms by whom invoices shall be verified, namely, by the manufacturer, the real owner, the seller, or the purchaser, and only by the agent of any of the above persons under certain limitations. This does away with the evasion of the laws by having outside parties swear to declaration. The place where the declaration to the invoice shall be made is also clearly defined.

First. At the place or in the consular district of manufacture.

Secondly. At the place or in the consular district of general store, if the market be actually supplied, or if the actual sale be made therefrom.

Thirdly. In countries lying adjacent to the United States, at the place or in the consular district nearest to the port or place of clearance for the latter.

Next follows a section explanatory of verifications in certain cases.

First. Goods manufactured or bought in one consular district, and ordered by an agent or other person residing in another district, must be invoiced in the district of manufacture.

Secondly. Goods manufactured in one consular district and shipped to another for sale, must be invoiced in the consular district where sold, but in no case must the law be construed to mean that goods manufactured in one district, and bought by an agent residing in another, must be invoiced in the district in which the agent resides, unless the goods shall have actually been at the place of invoice, in the said district, and bought there within the terms of the act.

Thirdly. No single invoice can cover goods other than those manufactured or bought at the same place or in the same consular district.

Fourthly. No single invoice can cover goods shipped by two or more vessels.

The remaining sections of this portion of the bill (Sections CXLIII, CXLIV, CXLV, CXLVI, and CXLVII) state the general rules to be

observed in all invoices, require declarations to give the market value at the time, define the currency in which invoices shall be made, prescribe rules for samples, and require consular officers to inform themselves respecting currencies, measures, weights, prices, and all other matters to insure accuracy in invoices.

I have found that parties have attempted to undervalue goods on the plea of prices for cash, or that the goods had been bought at that price some months before. The bill requires the market value at the time and place of invoice.

In regard to samples I will say that the present plan imposes a considerable labor and expense upon the importer to the United States without a corresponding return of benefit to the service. During my investigations at Lyons, France, I was informed that a thousand pounds of silk in samples had accumulated in the consulate. At Basle, in Switzerland, at least five thousand samples of silk had accumulated. I presume it would be safe to say that none of these samples have ever been called upon to verify the quality of silk, and, with the limited allowance for the care of consular property and archives, these samples are an actual incumbrance.

MISCELLANEOUS RELATING TO INVOICES.

Some important memoranda from my official journal I will here note, that they may be preserved in connection with the foregoing suggestions concerning the invoice business of consuls.

The shipper of goods, as such, should not be allowed to invoice goods under any circumstances. If he come under the head of any of the persons allowed to do so by the bill, it should be in that capacity alone.

Goods sent from the place or district of manufacture or sale, to an agent residing at a sea-port, to be invoiced by him as shipper, should not be allowed.

Invoices should be made out in the currency actually paid for the goods. For instance, a merchant of Liverpool buys goods in Germany, and pays in pounds sterling; the invoice should be made in the same. Invoices should not be received for goods already shipped, unless having bonds given.

Merchants should be required to come to the consulate in person, if practicable, and not by representative. Invoices should be at the full market value at the time of invoice, and no allowance to be made for cash or purchases some time before when prices were lower. Goods manufactured in one country, and sold in another for shipment to the United States, should be invoiced at the market value in the country and at the time of sale when invoiced for the United States.

Invoices should only be at the places specified in the laws.

Illustration: An American firm sends over its agents, who purchase goods at different places and send invoices to their financial agent in another district, who declares to the invoices in his district. Another case: One hundred and thirteen bales of jute were invoiced at £3,845 4s. 11d. at Glasgow, while one hundred and seventeen bales of the same about the same time were invoiced at Liverpool at £633 7s. 10d.

It is apparent that the difference above could not occur were the invoice laws better defined. The above case has been reported.

ATTEMPTS TO DEFRAUD THE REVENUE.

On this subject I gathered considerable information. Its use, however, I have confined to a practical application of measures to prevent the continuance of such attempts, as far as invoices are concerned.

JUDICIAL POWERS OF CONSULS.

The fifth chapter of the appended bill relates to the judicial functions of consular officers of the United States, exercised in certain countries. Although this is a portion of the consular business of great importance, my report of May 22, 1872, page 159 to 166, and page 249 to 305, treats on the subject so fully that I have nothing more to say. I discovered numerous imperfections in the practice of the powers authorized by the act of June 22, 1860. The bill appeared to me as possessing many good features, but lacked a few details to give it a proper subordination and responsibility to the Government. The act approved July 1, 1870, instead of accomplishing this, destroyed much of the force of the old law and introduced a new feature which, in the excess of precaution, appears more like a parody on justice than a serious proposition granting the right of appeal in certain cases.

In the judicial chapter of the appended bill the best features of the act of 1860 are retained, but the largest portions are new.

In the new sections or amended old ones the consular judicial powers are specially defined, and the extent of their authority is stated; the responsibility of officers is clearly set forth; the appointment and duties of consular interpreters, marshals, and constables, are placed upon a new basis, and the places of their residence fixed in accordance with the present needs of the service; the mode of preparing general regulations for the government of the consular courts of the United States is prescribed; consular judicial fees are required to be accounted for to the Government; consular courts are declared courts of record; a register of citizens is required to be kept; the application of the act to divers countries is plainly stated; the superior authority over consular courts is vested in the Secretary of State; consuls-general, or consuls of the highest class in the country, are given supervisory powers; the powers of vice-consuls are defined; the mode of procedure in arrests and trials, in all cases, is stated; provisions are made for appeals and arbitrations in certain cases; the rules for the government of cases of a criminal nature, and how criminals shall be executed, are provided; power is given to send persons charged with crime to the United States; ministers are to have original jurisdiction in cases in which consuls are interested; appeals may be made from ministers in criminal cases; a police report is required to be kept at consulates; citizens sent out of the country are to be reported; returns of civil suits must be made; prisons are only to be opened with the sanction of the President; consuls are authorized to call upon the local governments for assistance; the powers of consuls in marriages are stated, and reports upon the means of executing sentences must be made at certain times.

COMMENCEMENT OF THE ACT.

The commencement of the act in my opinion should be at the earliest moment. The appended bill contemplates the immediate going into operation of the parts organizing the bureau of the consular service, and the remaining portions as soon as practicable thereafter.

CONCLUSION.

In conclusion, I would respectfully state that it is my sincere hope that my labors in these consular investigations may be the means of leading to some action in the very important matter of a re-organization

of the consular service of the United States, so that it may be worthy of us as a great commercial nation. I presume I have, in some instances, spoken plainly. I have purposely endeavored to do so, that my meaning might not be misinterpreted or misunderstood. I hope, however, I have not gone beyond the bounds of official dignity.

My investigations have included a long list of consulates, illustrating every phase of the consul's duty, and every grade of consulate.

THE APPENDED CONSULAR BILL.

In addition to my communications addressed to you from the countries and cities visited by me, I kept notes of every point which might have more or less bearing upon the preparation of a bill to establish a suitable consular service.

In my report of May 22, 1872, I presented a draught of a bill with a view to the same end. That bill embodied the practical information I had obtained up to that time. I also embraced in it some provisions for the protection of American seamen at home and abroad. In the present bill, revised and enlarged in its consular features, I have omitted those parts relating to seamen, except they relate to the duties of consuls therein.

The new portions of the present bill, as compared with that in my previous report, are the classification of consular officers, the allowance for rents and office-expenses, the mode of appointing and paying for clerks, the relief of destitute seamen, and the verification of invoices. I presume some of these provisions will meet with opposition, for it may be considered that the measures are too radical a change. This I admit. With such a service as we have, it must be a radical re-organization to make anything worthy of the name "consular service."

In connection with the general observations I have made upon the defects of the present service, and the explanatory comments which I have made upon my own propositions, I would herewith respectfully submit, as embodying all my recommendations for consular re-organization, the inclosed bill "to establish a consular service for the United States of America, and to amend and to consolidate sundry acts of Congress relating to the powers and duties of consular-officers."

I have the honor to be, sir, your obedient servant,

DE B. RANDOLPH KEIM,

Agent of the United States, &c.

Hon. GEO. S. BOUTWELL,

Secretary of the Treasury, Washington, D. C.

A BILL

TO ESTABLISH A CONSULAR SERVICE FOR THE UNITED STATES OF AMERICA,
AND TO AMEND AND TO CONSOLIDATE SUNDRY ACTS OF CON-
GRESS RELATING TO THE POWERS AND DUTIES
OF CONSULAR OFFICERS.

PREPARED TO ACCOMPANY THE REPORT OF

DE B. RANDOLPH KEIM,

AGENT OF THE UNITED STATES FOR CONSULAR AFFAIRS, ETC.,

UPON THE CONDITION OF THE CONSULAR SERVICE OF THE
UNITED STATES OF AMERICA.

DECEMBER 31, 1872.

REPORT OF THE COMMISSIONER OF THE LAND OFFICE

CHAPTER I

SECTION 1. The land office was established by the act of the General Assembly of the State of New York, passed on the 1st day of January, 1814, and continued by subsequent acts of the Legislature. It was originally organized by the appointment of a Commissioner, who was to hold office for three years, and was to be elected by the Senate and Assembly, in joint session, on the 1st day of January, in each year.

SECTION 2. The Commissioner of the Land Office is to be elected by the Senate and Assembly, in joint session, on the 1st day of January, in each year, for a term of three years, and may be re-elected.

SECTION 3. The Commissioner of the Land Office is to be the chief officer of the Land Office, and is to have the management and control of the same.

SECTION 4. The Commissioner of the Land Office is to be the keeper of the records and documents of the Land Office, and is to have the custody of the same. He is also to be the keeper of the books and accounts of the Land Office, and is to have the custody of the same. He is also to be the keeper of the maps and charts of the Land Office, and is to have the custody of the same.

ARRANGEMENT OF THE SECTIONS OF THE BILL.

PRELIMINARY.

- Section I. Repealing certain laws, but said repeal not to affect matters pending under the present laws.
Section II. Acts, in whole or in part, relating to the duties of consuls, not to be repealed.
Section III. Short title of the act.
Section IV. Interpretation of terms used in this act.
Section V. The powers and duties expressed in this act not to exclude others incident to the appointment or treaty, &c.
Section VI. Exemption of ships belonging to the United States.
Section VII. Penalties for forgery of seal and fraudulent alteration of forms, and for not using forms issued by the Treasury Department.
Section VIII. Division of the act.

CHAPTER THE FIRST.

BUREAU OF THE CONSULAR SERVICE ESTABLISHED; ITS ORGANIZATION, DUTIES, AND POWERS.

- Section IX. Bureau of the Consular Service established.
Section X. The Bureau of the Consular Service to have charge of all matters, not diplomatic, and pertaining to the duties of consular officers.
Section XI. The principal officer of the Bureau of the Consular Service.
Section XII. Subordinates of the Bureau of the Consular Service.
Section XIII. Salaries.
Section XIV. Duties of the Superintendent of the Consular Service in regard to this and other acts.
Section XV. General duties of the Superintendent of the Consular Service.
Section XVI. Seal.
Section XVII. The organization of the Bureau of the Consular Service and duties of its respective branches.
Section XVIII. The Superintendent of the Consular Service to prepare and issue forms under the direction of the Secretary of the Treasury.
Section XIX. The Superintendent of the Consular Service to furnish lists of consular officers to collectors, &c.
Section XX. Reports to be made by the Superintendent of the Consular Service.
Section XXI. The Superintendent of the Consular Service to prepare commercial reports to be submitted to the Secretary of the Treasury for transmission to Congress.
Section XXII. Consular officers to make commercial returns to the Secretary of the Treasury.
Section XXIII. The Superintendent of the Consular Service to keep a record of books, furniture, &c., in possession of each consular officer.
Section XXIV. Certificates and documents purporting to be sealed or signed in a given manner to be received in evidence.
Section XXV. Application of moneys and fines paid into the Treasury.
Section XXVI. Consular and naval officers and officers of the customs may inspect documents and crews.
Section XXVII. The President may appoint an inspector.
Section XXVIII. Title and powers of inspector.
Section XXIX. Compensation, &c., of inspector.
Section XXX. Reports of inspector to be submitted to Congress.
Section XXXI. Penalty for obstructing inspector in the execution of his duty.

CHAPTER THE SECOND.

CONSULAR SERVICE ORGANIZED, AND PROVISIONS GOVERNING THE PAYMENT OF SALARIES, RETURNS OF FEES, ETC., AND PRESCRIBING THE GENERAL DUTIES AND POWERS OF CONSULAR OFFICERS.

- Section XXXII. Construction of terms of this act as applied to consular officers.
 Section XXXIII. Consular officers to be taken as officers of the Treasury.
 Section XXXIV. Principal officers of the consular service.
 Section XXXV. Two salaried vice-consuls-general to be appointed.
 Section XXXVI. Salaries of consular officers.
 Section XXXVII. Schedule of consulates.
 Section XXXVIII. Terms on which salaries shall be paid.
 Section XXXIX. Leaves of absence and salaries.
 Section XL. Salaries to be paid in lieu of salaries and fees formerly paid.
 Section XLI. Salaried consular officers not to transact business.
 Section XLII. Compensation to be in full.
 Section XLIII. Allowance to be made for rent of consular offices and office expenses.
 Section XLIV. Allowance for clerk hire.
 Section XLV. The President may appoint temporary consuls.
 Section XLVI. Certain consular officers, &c., to be examined.
 Section XLVII. Personal qualifications and age of candidates.
 Section XLVIII. Consular officers to be promoted.
 Section XLIX. Rule to be adopted for appointments in the commencement of the act.
 Section L. Any member of Congress may present candidates for examination.
 Section LI. Consular officers not allowed to hold two offices.
 Section LII. Superiors responsible for subordinates.
 Section LIII. Salaried consular officers must be citizens of the United States.
 Section LIV. Fees to go to unclassified consular officers.
 Section LV. Compensation of subordinate consular officers.
 Section LVI. No change of rank or compensation except by act of Congress.
 Section LVII. Commencement of duties.
 Section LVIII. Consular officers temporarily performing diplomatic duties.
 Section LIX. Consular officers not to exercise diplomatic functions unless expressly authorized.
 Section LX. Certain consular officers to give bonds.
 Section LXI. Subordinate unsalaried consular officers may be appointed.
 Section LXII. Jurisdiction of consuls-general.
 Section LXIII. Jurisdiction of consuls-general continued; list of consulates-general.
 Section LXIV. Extent of supervisory powers.
 Section LXV. How consular jurisdictions to be settled.
 Section LXVI. Certain fees allowed to be taken; how prescribed.
 Section LXVII. Penalty on consular officers demanding more fees than specified in the schedule, or specified in any order.
 Section LXVIII. Tables of fees to be exhibited at custom-houses in the United States.
 Section LXIX. Tables of fees to be exhibited in all consular offices of the United States in foreign countries.
 Section LXX. Fees to be accounted for.
 Section LXXI. Fees taken by unclassified consular officers to be accounted for.
 Section LXXII. Reducing consular fees on certain vessels.
 Section LXXIII. Fees, how to be collected.
 Section LXXIV. List of returns and accounts to be sent to the Secretary of the Treasury.
 Section LXXV. List of seamen to be kept.
 Section LXXVI. Consular books of record, and invoice, and accounts, to be opened to public inspection by persons interested.
 Section LXXVII. Blanks, &c., to be furnished.
 Section LXXVIII. Prices-current, &c., to be furnished to the Secretary of the Treasury.
 Section LXXIX. Collection of hospital dues.
 Section LXXX. Oaths may be administered by consuls.
 Section LXXXI. Consular officers may receive protests, declarations, &c.
 Section LXXXII. Penalty of false certificate to invoices and other papers.
 Section LXXXIII. Penalty of false certificate of ownership.
 Section LXXXIV. Penalty for illegally issuing passport, &c.
 Section LXXXV. Relating to powers of attorney.
 Section LXXXVI. Neglect of duty.
 Section LXXXVII. Penalty for neglect to render accounts.
 Section LXXXVIII. Consular courts of inquiry.

- Section LXXXIX. Penalty for using the American flag except according to law.
 Section XC. Revision of section 4 of the act prohibiting the cooly trade.
 Section XCI. Unpaid letters for the United States at foreign ports to be forwarded to the Superintendent of the Consular Service.
 Section XCII. Consular officers not to correspond for newspapers, &c.
 Section XCIII. The agent and consul-general in Egypt.
 Section XCIV. Consular officers to take possession of estates of American citizens other than seamen dying abroad, if the laws permit.
 Section XCV. Duties of consular officers in estates of citizens of the United States in certain countries dying abroad.
 Section XCVI. Consular officers to execute the laws of the United States relating to crimes of citizens of the United States on the high seas, &c.
 Section XCVII. For the safe custody and conveyance of prisoners to the United States.
 Section XCVIII. As to the conveyance of offenders and witnesses to the United States.
 Section XCIX. Duties of consular officers in cases of stranded vessels.
 Section C. Admission of certain documents, &c., under the consular seal in evidence.
 Section CI. Naval officers of the United States in certain cases may exercise the powers of consuls.

CHAPTER THE THIRD.

THE RECIPROCAL DUTIES OF CONSULAR OFFICERS OF THE UNITED STATES AND MASTERS OF AMERICAN SHIPS, AND FOR THE PROTECTION AND RELIEF OF DESTITUTE AMERICAN SEAMEN AT FOREIGN PORTS OR PLACES.

- Section CII. Repealing acts inconsistent with this act.
 Section CIII. The Superintendent of the Consular Service and consular officers to carry out acts relating to seamen.
 Section CIV. Seamen's wages to be paid when an American ship is sold abroad.
 Section CV. Relief dues to be paid in lieu of extra wages.
 Section CVI. Consular officers of the United States to extend relief to destitute American seamen.
 Section CVII. Relief of American seamen arriving on other than American vessels.
 Section CVIII. The Secretary of the Treasury to require information from collectors of customs, and may appoint a secret agent.
 Section CIX. Consular officers to see that agreements are complied with.
 Section CX. Return to be made in case of ship lost or sold abroad.
 Section CXI. No seaman to be discharged abroad, nor to be abandoned or left behind, without the sanction of the consul.
 Section CXII. If any of the crew are left behind, the proof of sanction or authority to be upon the master.
 Section CXIII. On discharge of seamen abroad by sale of ship, or otherwise, certificates of discharge to be given and seamen to be sent home.
 Section CXIV. Forcing seamen on shore, &c., a misdemeanor.
 Section CXV. Seamen when allowed to be left behind to be paid their wages.
 Section CXVI. Such wages to be treated as money due to seamen.
 Section CXVII. Discharge of seamen.
 Section CXVIII. Destitute seamen to be sent home.
 Section CXIX. Reasonable compensation to be paid where no consular officer.
 Section CXX. Power of the Government to sue for the amount advanced for the relief of seamen left abroad.
 Section CXXI. Masters to seek services of consular officers.
 Section CXXII. Duty of a master upon arriving in port to deposit papers with consular officer.
 Section CXXIII. Ship's agreement on arrival at a foreign port to be deposited with the consul, and at a home port with the collector of customs.
 Section CXXIV. Seamen engaged in a foreign port to be shipped with the sanction and in the presence of the consul.
 Section CXXV. Proceedings in the shipment of a seaman.
 Section CXXVI. Consuls empowered to require the production of the agreement, muster-roll, &c.
 Section CXXVII. Seamen to be allowed to go ashore to make complaint to a consular officer.
 Section CXXVIII. Forfeiture for frivolous complaint.
 Section CXXIX. Masters and seamen can make complaints to consuls; and appointment of inspectors.
 Section CXXX. Consular officers shall enforce laws relating to discipline on American ships.
 Section CXXXI. Consular officers to reclaim deserters.
 Section CXXXII. Consular officers to inquire into the cause of desertion.
 Section CXXXIII. Desertions.
 Section CXXXIV. Penalty for neglect of duty.

CHAPTER THE FOURTH.

RESPECTING THE VERIFICATION AND AUTHENTICATION OF INVOICES, AND THE DUTIES OF CONSULAR OFFICERS OF THE UNITED STATES THEREIN.

- Section CXXXV. Repeal of acts inconsistent with this portion of this act.
 Section CXXXVI. Definition of terms used in this portion of this act.
 Section CXXXVII. Persons declaring to the invoice must be the persons named therein.
 Section CXXXVIII. Verification to be by declaration before a consular officer, &c.
 Section CXXXIX. Verification to be by declaration and not by oath, and penalty for violation of act.
 Section CXL. By whom invoices shall be verified.
 Section CXLI. Where declaration to invoice shall be made.
 Section CXLII. Explanatory of how, when, and where invoices shall be verified in certain cases.
 Section CXLIII. General rules to be observed in all invoices.
 Section CXLIV. Declarations to give the market value at the time, and no discounts for cash, &c., to be allowed.
 Section CXLV. The currency in which invoices shall be made.
 Section CXLVI. Respecting samples.
 Section CXLVII. Consular officers to keep themselves informed respecting currencies, &c.

CHAPTER THE FIFTH.

IN RELATION TO THE EXERCISE OF JUDICIAL FUNCTIONS BY CONSULAR OFFICERS OF THE UNITED STATES OF AMERICA IN CERTAIN COUNTRIES.

- Section CXLVIII. The power acquired by the United States for its consular officers to exercise judicial powers.
 Section CXLIX. Acts done in pursuance of such power to be of the same effect as if done under local laws.
 Section CL. Definition of terms.
 Section CLI. The consul-general to have the powers in certain cases conferred in this act upon ministers.
 Section CLII. Consular officers to exercise judicial powers.
 Section CLIII. No jurisdiction to be exercised beyond the powers of the act.
 Section CLIV. Powers of consular officers in the premises.
 Section CLV. How proceedings in consular courts shall be held.
 Section CLVI. Consular judicial officers responsible as such.
 Section CLVII. Consular officers solely responsible.
 Section CLVIII. Courts authorized to procure evidence of power by application to the Secretary of State.
 Section CLIX. Consular interpreters to be appointed.
 Section CLX. Marshals to be appointed.
 Section CLXI. Constables of consular courts to be appointed.
 Section CLXII. Places at which consular interpreters, marshals, and constables shall be appointed.
 Section CLXIII. The term of appointment of consular interpreters, marshals, and constables.
 Section CLXIV. Removal of interpreters, marshals, &c.
 Section CLXV. Duties of marshals and constables of consular courts.
 Section CLXVI. May appoint messengers, &c.
 Section CLXVII. Regulations for the government of consular courts to be established.
 Section CLXVIII. Consular officers to make suggestions.
 Section CLXIX. All fines and fees incident to consular courts to be accounted for and remitted to the Secretary of the Treasury.
 Section CLXX. Consular courts to be courts of record.
 Section CLXXI. A register of citizens of the United States to be kept.
 Section CLXXII. No fee to be charged for enrollment.
 Section CLXXIII. The act as applied to the Turkish dominions.
 Section CLXXIV. Application to Egypt.
 Section CLXXV. Application of judicial powers to the Barbary States.
 Section CLXXVI. The act as applied to Persia.
 Section CLXXVII. Judicial powers in uncivilized countries.
 Section CLXXVIII. Application of judicial powers to other uncivilized countries.
 Section CLXXIX. Superior authority over consular courts.
 Section CLXXX. Consul-general or consul of the highest class to have supervisory powers over consuls in judicial matters.

- Section CLXXXI. Powers of vice-consuls-general and vice-consuls in the award of punishments.
- Section CLXXXII. Persons acting temporarily as consuls to have power.
- Section CLXXXIII. Consuls to co-operate with ministers of the United States.
- Section CLXXXIV. May issue warrants for arrest of citizens of the United States, &c.
- Section CLXXXV. Civil rights.
- Section CLXXXVI. How such jurisdiction shall be exercised.
- Section CLXXXVII. What cases may be decided by consuls alone.
- Section CLXXXVIII. Certain cases decided by consuls sitting alone may be appealed.
- Section CLXXXIX. Assessors to be appointed in cases where legal questions involved.
- Section CXC. Assessors to be appointed in certain civil cases.
- Section CXCI. Evidence to be taken in writing.
- Section CXCI. Ministers may hear appeals.
- Section CXCI. Punishment to be according to the magnitude of the case.
- Section CXCI. Punishment of murder and insurrection.
- Section CXCI. How criminals shall be executed.
- Section CXCI. Arbitration recommended in certain criminal cases.
- Section CXCI. Settlements by mutual agreement recommended in civil cases.
- Section CXCI. Power to send persons charged with crimes for trial to the United States.
- Section CXCI. Power to send convicts for execution or imprisonment to the United States.
- Section CC. Limitations of actions.
- Section CCI. Ministers to have original jurisdiction in cases where consuls interested.
- Section CCII. Appeal from the minister in criminal cases, &c.
- Section CCIII. Appeals from the consuls.

- Section CCXIII. Marriages in the presence of consular officers in foreign countries valid.

CONCLUSION.

- Section CCXIV. Commencement of this act.

APPENDIX.

- Schedule A. Copies of forms to be used by consular officers of the United States, for the prevention of abuses in the transportation of Chinese passengers in American vessels.
- Schedule B. Returns of civil suits.
- Schedule C. Acts and parts of acts repealed by consular act of 187—.
- Schedule D. Acts or parts of acts not to be repealed.

A BILL

TO ESTABLISH A CONSULAR SERVICE FOR THE UNITED STATES OF AMERICA, AND TO AMEND AND CONSOLIDATE SUNDRY ACTS OF CONGRESS RELATING TO THE POWERS AND DUTIES OF CONSULAR OFFICERS.

PRELIMINARY.

Repealing certain laws, but said repeal not to affect matters pending under the present laws.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the acts and parts of acts hereinafter mentioned shall be, and the same are hereby, repealed, but such repeal shall not be construed to affect or extend to any crimes or offenses heretofore committed, and which are punishable under any law hereby repealed; but all such crimes and offenses shall be prosecuted, determined, and punished according to the said laws, the same as if this act had not passed; nor shall such repeal be construed to affect the appointment of any consular officer or officers connected with the consular service unless the consulate or office be abolished by the provisions of this act, until a successor shall have been appointed in the place of such officer, and shall have arrived at his post and commenced the performance of his official duties; nor shall such repeal be construed to affect any debts or demands under or by virtue of the said laws, but all such debts and demands shall have full force and effect; but no debts or demands incurred after the date of the going into effect of this act shall have any force or effect whatever, except in accordance with the provisions of this act, the repeal as aforesaid to apply to the following acts, or parts of acts, that is to say: Sections two, three, six, and nine of the act entitled "An act concerning consuls and vice-consuls," approved April fourteenth, seventeen hundred and ninety-two; the first, second, third, fourth, seventh, eighth, and ninth sections of the act entitled "An act supplementary to the act concerning consuls and vice-consuls, and for the further protection of American seamen," approved February twenty-eighth, eighteen hundred and three; all of the act entitled "An act in addition to the act entitled 'An act supplementary to the act concerning consuls and vice-consuls, and for the further protection of American seamen,'" approved February twenty-eighth, eighteen hundred and eleven; all of the act entitled "An act to prescribe the punishments of consuls, commercial agents, and others in certain cases," approved March third, eighteen hundred and thirty-five; all of the act entitled "An act in addition to the several acts regulating the shipment and discharge of seamen, and the duties of consuls," approved July twentieth, eighteen hundred and forty, excepting the fifth, sixth, and seventh sections already repealed; all of the act entitled "An act requiring foreign regulations of commerce to be laid annually before Congress," approved August sixteenth, eighteen hundred and forty-two; the second section of the act entitled "An act to amend an act entitled 'An act to provide for the enlistment of boys for the naval service, and to extend the term of enlistment of seamen,'" approved February twentieth, eighteen hundred and forty-five; so much of the sixth section of the act entitled "An act to provide for the transportation of the mail between the United States and foreign countries, and for other purposes," approved March third, eighteen hundred and forty-five, as relates to the payment of certain postages by consular officers; the sixth section of the act entitled "An act to provide for recording the conveyance of vessels, and for other purposes," approved July twenty-ninth, eighteen hundred and fifty; all of the act entitled "An act to amend an act entitled 'An act requiring foreign regulations of commerce to be laid annually before Congress,' approved August sixteenth, eighteen hundred and forty-two, and for other purposes," approved August eighteenth, eighteen hundred and fifty-six; the third, fourth, fifth, sixth, seventh, eighth, and eleventh, and all other sections, excepting the thirty-third, which follow thereafter, of the act entitled "An act to regulate the diplomatic and consular systems of the United States," approved August eighteenth, eighteen hundred and fifty-six, and relate to consular officers; the second and third sections of the act entitled "An act making appropriation for the consular and diplomatic expenses of the Government for the year ending the thirtieth of June,

eighteen hundred and sixty," approved March third, eighteen hundred and fifty-nine; all portions of the act entitled "An act to carry into effect the provisions of the treaties between the United States, China, Japan, Siam, Persia, and other countries, giving certain judicial powers to ministers and consuls, or other functionaries of the United States, in those countries, and for other purposes," approved June twenty-second, eighteen hundred and sixty, as relate to consular officers, courts, marshals, and jails; all of the act entitled "An act to reduce consular fees for vessels running to or between foreign ports," approved August fifth, eighteen hundred and sixty-one; so much of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending thirtieth of June, eighteen hundred and sixty-three, and additional appropriations for the year ending thirtieth of June, eighteen hundred and sixty-two," approved February fourth, eighteen hundred and sixty-two, as relates to the compensation to be allowed to certain consulates therein named; such portion of the act entitled "An act to prohibit the cooly trade by American citizens in American vessels," approved February nineteenth, eighteen hundred and sixty-two, as relates to the duties of consuls, that is to say, portion of section fourth; such portion of the act entitled "An act to authorize the President of the United States to appoint diplomatic representatives to the republics of Hayti and Liberia," approved June fifth, eighteen hundred and sixty-two, as accredits the commissioner of the United States to Hayti, also as consul-general, and as relates to the compensation allowed to the commissioner and consul-general of the United States to Liberia; so much of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June thirtieth, eighteen hundred and sixty-four," approved February fourth, eighteen hundred and sixty-three, as relates to the salary of the consul at Guaymas; so much of the twenty-fourth section of the act entitled "An act making appropriations for sundry civil expenses of the Government for the year ending June thirtieth, eighteen hundred and sixty-four, and for the year ending June thirtieth, eighteen hundred and sixty-three, and for other purposes," approved March third, eighteen hundred and sixty-three, as authorizes the President of the United States to discontinue the consulate of the United States at Trinidad de Cuba, and authorizes the appointment of a consul at Cienfuegos; all of the act entitled "An act to provide for the collection of hospital dues from vessels of the United States sold or transferred in foreign ports or waters," approved April twenty-ninth, eighteen hundred and sixty-four; so much of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending the thirtieth of June, eighteen hundred and sixty-five, and for other purposes," approved June twentieth, eighteen hundred and sixty-four, as fixes the salaries to be paid to certain consulates therein named, and also sections two and four of the said act, and so much of the same act as says, "And the consul-general at Alexandria shall have the name and title of agent and consul-general;" so much of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June thirtieth, eighteen hundred and sixty-seven, and for other purposes," approved July twenty-fifth, eighteen hundred and sixty-six, as fixes the salaries to be paid to certain consulates therein named, also such portions of the third section as relates to the application of consular fees in certain cases; so much of the eleventh section of the act entitled "An act making appropriations for sundry civil expenses of the Government for the year ending June thirtieth, eighteen hundred and sixty-seven, and for other purposes," approved July twenty-eighth, eighteen hundred and sixty-six, as applies to the consulate-general of the United States in Egypt, and to the powers of the agent and consul-general in the said country; so much of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June thirtieth, eighteen hundred and sixty-eight, and for other purposes," approved February twenty-eighth, eighteen hundred and sixty-seven, as fixes the salaries to be paid to certain consulates therein named; so much of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June thirtieth, eighteen hundred and sixty-nine, and for other purposes," approved March thirtieth, eighteen hundred and sixty-eight, as fixes the salaries to be paid to certain consulates named therein, and sections two and three; all of the act entitled "An act authorizing the admission in evidence of

copies of certain papers, documents, and entries," approved January eighth, eighteen hundred and sixty-nine; the second, third, fifth, and sixth sections of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June thirtieth, eighteen hundred and seventy, and for other purposes," approved March third, eighteen hundred and sixty-nine; the whole of the act entitled "An act to amend an act entitled 'An act to carry into effect provisions of the treaties between the United States, China, Japan, Siam, Persia, and other countries, giving certain judicial powers to ministers and consuls, or other functionaries of the United States in those countries, and for other purposes,' approved June twenty-second, eighteen hundred and sixty," approved July first, eighteen hundred and seventy; and so much of the act entitled "An act making appropriations for sundry civil expenses of the Government for the year ending June thirtieth, eighteen hundred and seventy-one, and for other purposes," approved July fifteenth, eighteen hundred and seventy, as fixes the salary of the consul at Port Said, in Egypt; and in every case the repeal herein provided shall be to the extent to which such acts or parts of acts are therein expressed to be repealed, and all such provisions of any other acts of date prior to, during the existence of, or subsequent to, the acts enumerated in this section, and all such laws, customs, instructions, and rules as are inconsistent with the provisions of this act, shall be null and void, and of no effect in changing, altering, or modifying anything hereinafter provided.

Acts in whole or in part relating to the duties of consuls not to be repealed.

SEC. 2. That the following acts or parts of acts, in whole or in part as specified herein, shall remain in full force and effect for the time being; that is to say, the seventh and eighth sections of the act entitled "An act supplementary to and to amend an act to regulate the collection of duties on imports and tonnage, passed second March, seventeen hundred and ninety-nine, and for other purposes," approved March first, eighteen hundred and twenty-three, as subsequently modified or superseded by the first section of the act of March third, eighteen hundred and sixty-three, and the act of March second, eighteen hundred and sixty-seven; the sixteenth section of the act entitled "An act to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other purposes," approved August thirtieth, eighteen hundred and forty-two; the first, second, ninth, and tenth sections, and all other parts of the act entitled "An act to regulate the diplomatic and consular systems of the United States," approved August eighteenth, eighteen hundred and fifty-six, as relates to diplomatic representatives of the United States; such portions of the act entitled "An act to carry into effect provisions of the treaties between the United States, China, Japan, Siam, Persia, and other countries, giving certain judicial powers to ministers and consuls, or other functionaries of the United States in those countries, and for other purposes," approved June twenty-second, eighteen hundred and sixty, as relates to diplomatic representatives of the United States, their powers, duties, and privileges, and ministerial courts, except as may be inconsistent with the provisions of this act; the seventeenth, eighteenth, and nineteenth sections of the act entitled "An act increasing temporarily the duties on imports, and for other purposes," approved July fourteenth, eighteen hundred and sixty-two; the act entitled "An act to prevent and punish frauds upon the revenue, to provide for the more certain and speedy collection of claims in favor of the United States, and for other purposes," approved March third, eighteen hundred and sixty-three; the third section of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending the thirtieth of June, eighteen hundred and sixty-five, and for other purposes," approved June twentieth, eighteen hundred and sixty-four, so far as relates to the fee for certifying invoices in certain cases in the British North American provinces; so much of the twenty-seventh section of the act entitled "An act to increase duties on imports, and for other purposes," approved June thirtieth, eighteen hundred and sixty-four, as relates to invoices; the act entitled "An act further to provide for the verification of invoices," approved March third, eighteen hundred and sixty-five; and the act entitled "An act to amend section one of an act to prevent and punish frauds upon the revenue, and for other purposes, approved March third, eighteen hundred and sixty-three," approved July twenty-seventh, eighteen hundred and sixty-eight; and the act entitled "An act to re-organize the marine-hospital service, and to provide for the relief of sick and disabled seamen," approved June twenty-ninth, eighteen hundred and seventy.

SEC. 3. That this act may be cited for all purposes as the "consular act of eighteen hundred and seventy-three." Short title of the act.

SEC. 4. That in the construction and for the purposes of this act, if not inconsistent with the context or subject-matter, the following terms shall have the respective meanings herein assigned to them; that is to say: Interpretation of terms used in this act.

"Consular officer" shall include consul-general, vice-consul-general, consul, and vice-consul, and any person for the time being discharging the duties of consul-general, vice-consul-general, consul, or vice-consul.

"Master" shall include every person, except a pilot, having command or charge of any ship belonging to a citizen of the United States.

"Seaman" shall include every person, except masters and pilots, employed or engaged in any capacity on board any ship.

"Ship" shall include every description of vessel used in navigation, whether propelled by steam or sail, and not propelled by oars.

"American ship" shall be taken to mean any ship carrying the flag and under the jurisdiction of the United States of America.

SEC. 5. That the specification of certain powers and duties in this act, to be exercised or performed by consular officers of the United States of America, shall not be construed to the exclusion of others resulting from the nature of their appointments, or any treaty or convention under which they may act. The powers and duties expressed in this act not to exclude others incident to the appointment or treaty, &c.

SEC. 6. That this act shall not, except as may be hereinafter specially provided, apply to ships belonging to the Government of the United States. Exemption of ships belonging to the U. S.

SEC. 7. That every person who forges or assists in forging, or procures to be forged, such seal or other distinguishing mark as may be adopted and required by the Treasury Department, or who fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any form issued by the Treasury Department, with the view of evading any of the provisions of this act, or any condition contained in such form, shall, for each offense, be deemed guilty of a misdemeanor; and every person who, in any case in which a form sanctioned by the Secretary of the Treasury is by any part of this act required to be used, uses, without reasonable excuse, any form not purporting to be so sanctioned, or who prints, sells, or uses any document purporting to be a form so sanctioned, knowing the same not to be so sanctioned, for the time being, or not to have been prepared and issued by the Secretary of the Treasury, shall, for each such offense, incur a penalty not exceeding fifty dollars. Penalties for forgery of seal and fraudulent alteration of forms, and for not using forms issued by the Treasury Department.

SEC. 8. That this act, for the convenience of the subject-matter treated upon, shall be divided into chapters, as follows: Provisions of this act.

Chapter the first.—Bureau of the Consular Service established: its organization, duties, and powers.

Chapter the second.—Consular service organized, and provisions governing consular salaries, fees, and so forth, and prescribing the general powers and duties of consular officers.

Chapter the third.—The reciprocal duties of consular officers and masters of ships, and for the protection of American seamen from imposition abroad.

Chapter the fourth.—Respecting the verification and authentication of invoices, and the duties of consular officers of the United States therein.

Chapter the fifth.—In relation to the exercise of judicial functions by consular officers of the United States in certain countries.

CHAPTER THE FIRST.

BUREAU OF THE CONSULAR SERVICE ESTABLISHED: ITS ORGANIZATION, DUTIES, AND POWERS.

SEC. 9. That there shall be established in the Treasury Department, at the seat of Government of the United States of America, a bureau, to be known as the Bureau of the Consular Service of the United States of America. Bureau of the Consular Service established.

SEC. 10. That the said Bureau of the Consular Service shall have special jurisdiction, under the supreme direction of the Secretary of the Treasury, over all matters, as hereinafter specified, relating to consular officers and their duties with respect to merchant-ships, masters, and sea- The Bureau of the Consular Service to have charge of all matters not dip.

lomatic, and pertaining to the duties of consular officers.

The principal officer of the Bureau of the Consular Service.

Subordinates of the Bureau of the Consular Service.

Salaries.

Duties of the Superintendent of the Consular Service in regard to this and other acts.

General duties of the Superintendent of the Consular Service.

Seal.

The organization of the Bureau of the Consular Service and duties of its respective branches.

men, and all other duties designated in other acts or growing out of their appointment as commercial representatives of the United States at foreign ports or places.

SEC. 11. That the principal officer of the said Bureau of the Consular Service shall be a person to be known as "the Superintendent of the Consular Service of the United States of America," who shall be appointed by the President, by and with the advice and consent of the Senate, and who may be removed in the same manner.

SEC. 12. That the Superintendent of the Consular Service, for the transaction of the necessary duties of the bureau aforesaid, under his charge, shall be entitled to and may recommend to the Secretary of the Treasury for appointment the following employés, namely: One chief clerk for the Superintendent of the Consular Service; one chief clerk of class four, in charge of the division of consular accounts; one chief clerk of class four, in charge of the division of consular appointments and property; one chief clerk of class four, in charge of the division of seamen; one chief clerk of class four, in charge of the division of invoices; one chief clerk of class four, in charge of the division of judicial powers of consuls, trials and proceedings in consular courts, and the settlement of the estates, in certain cases, of citizens of the United States dying abroad; one chief clerk of class four, in charge of consular archives and commercial statistics; four clerks of class three; one messenger for the Superintendent of the Consular Service, and such a number of temporary clerks and female clerks as may be from time to time required.

SEC. 13. That the annual salaries of the Superintendent of the Consular Service, clerks, and others employed in the Bureau of the Consular Service, shall be as follows:

Of the Superintendent of the Consular Service, five thousand dollars.

Of the chief clerk for the Superintendent of the Consular Service, two thousand dollars.

Of the chief clerks, class four, in charge of divisions of the Bureau of the Consular Service, six in number, each one thousand eight hundred dollars.

Of the clerks of class three, six in number, each one thousand six hundred dollars.

Of the messenger to the Superintendent of the Consular Service, eight hundred and forty dollars.

Of the temporary clerks, according to their class.

SEC. 14. That it shall be the duty of the Superintendent of the Consular Service, and he is hereby authorized, under the direction of the Secretary of the Treasury, to carry into execution the provisions of this act and all other acts in force, for the time being, designating other duties to be performed by consular officers, excepting always such acts or parts of acts investing consular officers, for the time being, with diplomatic functions, and then only shall such exception apply to such portion of their duties as are required by the diplomatic functions so vested in them, but shall in no wise modify, change, or alter their regular duties to the Bureau of the Consular Service in the Treasury Department.

SEC. 15. That the Superintendent of the Consular Service, under the direction and in the name of the Secretary of the Treasury, shall instruct all persons in the consular service of the United States, to the extent necessary, with reference to their duties in all matters pertaining to the provisions of this act, and all other acts or parts of acts imposing duties, excepting diplomatic, for the time being, on consular officers as aforesaid; shall in the same manner prescribe the forms of all official papers; prescribe the manner of keeping and stating accounts; enforce the prompt rendition of returns relative to the said accounts; supervise, according to law, and subject to the settlement of the Auditor and Comptroller, all receipts and expenditures incident to the consular service; prosecute all offenses against the consular laws; order consular courts of inquiry; direct investigations; hear and recommend action on all complaints; and generally superintend the business of the Bureau of the Consular Service, and execute all laws and instructions relative to the consular service.

SEC. 16. That the Superintendent of the Consular Service shall affix the seal of the Treasury Department, in the authentication of all transcripts and copies which may be required from his bureau.

SEC. 17. That in order to facilitate the business which has been generally and shall be, as hereinafter designated, specifically under the supervision of the Bureau of the Consular Service, the said bureau shall be composed of the following divisions, that is to say:

First. The division of accounts, which shall have charge of the

accounts for expenses incident to the consular service, whether defined by law or incidental, in the payment of consular salaries, rent of consular buildings, hospital dues, and consular fees of all kinds, and all other consular accounts not otherwise assigned.

Secondly. The division of consular appointments and property, in which shall be kept a roster, giving the name, place of their official residence, place and date of birth, nationality, if foreign, and every fact or circumstance connected with the personal and official conduct of consular officers, as indicating their fitness, or otherwise, for the position; to have charge of and to keep on file against the name of any officer against whom the same are made, all complaints, from whatever source, to be accessible in case the seriousness of their nature, or for any other sufficient reason, they should demand an investigation; to keep a record of all consular property, seals, flags, arms, presses, books, blanks, stationery, furniture, and so forth, at each consulate of the United States, as hereinafter provided, and to hold the consular officer in whose possession any public property may be, responsible for the same, until relieved by the receipt of his successor for the same, or by satisfactory evidence of destruction by wear or accident.

Thirdly. The division of seamen, to have charge of all disbursements and receipts on account of relief of destitute American seamen, and of all other matters relating to seamen and prescribed by this act.

Fourthly. The division of invoices, to have charge of all instructions and other matters, excepting accounts of fees, relating to invoices.

Fifthly. The division of judicial powers of consuls, trials, and proceedings in consular courts, and the settlement of estates, in certain cases, of citizens of the United States dying abroad, to have charge of all financial business incident to the provisions of this act in the matters above enumerated, and also the accounts growing out of such estates, and the moneys remitted to the Treasury Department, from such sources, to be refunded to the legal heirs or representatives of the parties.

Sixthly. The division of consular archives and commercial statistics to have the custody of all books and papers forming the archives of the Bureau of the Consular Service, and the care, classification, and editing, under the supervision of the Superintendent of the Consular Service, of all commercial returns of American shipping and other interests, and general reports from consular officers of the United States respecting foreign commerce, trade, industry, and other matters of importance at their respective ports; but the duties herein specified shall not operate to preclude any other duties connected with the consular service which it might be necessary from time to time to assign to each or all of the said divisions.

SEC. 18. That the Superintendent of the Consular Service, under the direction and with the sanction of the Secretary of the Treasury, may, from time to time, as the exigencies of the service may require, prepare forms of the various books, instruments, blanks, and papers required by this act or any other acts imposing additional powers or duties upon the Bureau of the Consular Service, and may, in the manner above stated, from time to time, make such alterations therein as he deems requisite; and it shall be the duty of the Secretary of the Treasury, before finally issuing or altering any such form, to give such public notice thereof as he considers necessary in order to prevent inconvenience; and every such book, instrument, blank, and paper, as aforesaid, shall be in the form sanctioned by the Secretary of the Treasury for the time being, and no such book, instrument, blank, or paper as aforesaid, unless made in such form, shall be admissible in evidence in any civil proceeding on the part of any owner or master of any ship, or in any other matters of dispute; and every such book, instrument, blank, or paper, if made in a form purporting to be a proper form, and to be sealed or marked as aforesaid, shall be taken to be made in the form hereby required, unless the contrary is proved.

The Superintendent of the Consular Service to prepare and issue forms under the direction of the Secretary of the Treasury.

SEC. 19. That it shall be the duty of the Superintendent of the Consular Service to furnish to the collectors or other chief officers of customs, at all ports in the United States, an official list, with the place of official residence of all consular officers of the United States, or any other person for the time being authorized to act in their stead; the said list to be used for reference and to prevent fraud, through the signing of invoices or other consular papers, by persons not authorized thereto; and it shall be the duty of the said collectors or other chief officers of

The Superintendent of the Consular Service to furnish list of consular officers to collectors, &c.

customs to report to the Secretary of the Treasury, under cover to the Superintendent of the Consular Service, the names of all persons so improperly signing the papers aforesaid, together with all information necessary to the discovery and identification of the parties, and their speedy punishment.

Reports to be made by the Superintendent of the Consular Service.

SEC. 20. That the superintendent of the consular service shall make, and he is hereby required to make, the following reports to the Secretary of the Treasury for transmission to Congress at each annual session :

First. A report on the condition of the affairs of his Bureau during the year, with respect to its internal workings and the general condition of the consular service abroad, as it appears on the records and in the accounts of the Bureau.

Secondly. A report of all changes, modifications, or improvements during the year, in the Bureau or the consulates abroad, or in the forms and instructions which may have been deemed advisable, stating such changes and the reasons therefor.

Thirdly. A statement of disbursements during the year on account of salaries, rents, incidental expenses, where allowed ; relief of destitute American seamen ; losses by exchange ; consular courts ; the punishment of crimes committed by American citizens on the high seas, or in ports or places where consular officers have sufficient powers to try and punish such crimes and offenses, and of any other disbursement authorized and made under the supervision of the Consular Bureau ; also all receipts from fees of all kinds, relief dues of seamen, hospital dues, amounts remitted as balances due to the legal heirs or representatives of American citizens dying abroad, and of any other moneys, such as fines, &c., received, stating the source ; also giving a summary of the receipts and expenditures incident to the consular service, with a comparative list showing preceding years, not to exceed five.

Fourthly. A list of all officers belonging to the consular service during the year, and in each case the number of days present and the number of days absent from their consulates, whether with or without leave, also giving the aggregate number of years, months, and days of each officer's active duty, since the date of his commission, and, in the case of each officer, the condition and form of accounts made by him ; whether returns are made promptly ; what reports on commercial or other subjects he has made during the year, and any general information as to efficiency or complaints ; but in no case, except in form to be hereafter defined, shall the nature of such complaints be made in such report, but merely the fact to be stated, and the extent of punishment, if any, inflicted, whether by fine, suspension, reprimand, dismissal, or imprisonment.

Fifthly. A financial report of the business for the year in the consular courts of the United States in countries where such courts are permitted, giving a list of such courts, the officers presiding, and the crimes and misdemeanors tried, and the judgments of a pecuniary nature awarded in each case in such court ; also a list of citizens of the United States dying abroad during the year, and officially reported to the Secretary of the Treasury, and all matters relating to the settlement of estates of citizens of the United States by consular officers.

The Superintendent of the Consular Service to prepare commercial reports to be submitted to the Secretary for transmission to Congress.

SEC. 21. That it shall be the duty of the Superintendent of the Consular Service to compile, in a compendious form, to be transmitted by the Secretary of the Treasury annually to Congress within thirty days after the commencement of each ordinary session, all commercial information communicated to the Secretary of the Treasury during the year, by consular officers of the United States abroad, or contained in the official publications of other governments, and deemed of sufficient importance to be republished for information.

Consular officers to make commercial returns to the Secretary of the Treasury.

SEC. 22. That to enable the Superintendent of the Consular Service to make the report of commercial information to the Secretary of the Treasury, as required by the last above-named section, it shall be, and it is hereby declared to be, the duty of all principal consular officers of the United States, or officers acting as such for the time being, in foreign countries, to procure and transmit to the Secretary of the Treasury, under cover to the Superintendent of the Consular Service, authentic commercial, mercantile, or other information respecting the ports or places at which they reside, of a character and form and at such periods as the Secretary of the Treasury may from time to time specially prescribe ; and it shall be the duty of the Superintendent of the Consular Service to specify in the said annual report to the Secretary of the Treasury the names of any of the said officers who may have failed,

without sufficient reason, to comply with the provisions prescribed in this section.

SEC. 23. That there shall be kept in the Bureau of the Consular Service as aforesaid a record of consular books, forms, seals, arms, flags, presses, and furniture of all kinds, the property of the United States, at each consulate and each principal consular officer, and from him to his successor, and his successors shall be held responsible for said books and other property of the United States as aforesaid, including also the consular property of the United States in his consular district; and for the purposes of the commencement of this portion of this act, it shall further be the duty of the Superintendent of the Consular Service to require of all full and principal consular officers of the United States, upon arriving at their posts, respectively, or of those already resident at the consulate, a full and complete inventory of all property of the United States at their consulate and in their consular district; and in case at any time, including the provisions of the present act, any consulate of the United States shall be abolished, for any reason whatsoever, the said superintendent shall require the full consular officer of the United States nearest to the port or place of the consulate abolished, to take possession of all such property of the United States in whose hands soever he may find it, and in all respects comply with, and he shall be subject to, the rules prescribed for the transfer of consular property of the United States. And it shall be the duty of the Superintendent of the Consular Service, under the direction of the Secretary of the Treasury, to prepare and issue the necessary forms, to be used in accounting for and transferring as aforesaid, as occasion may require, all property of the United States in the consulate, from one principal consular officer to his successor, and any deficiencies not explained in a satisfactory manner shall be charged to the principal officer of the consulate at the time said deficiency was discovered, and the amount of loss thereby sustained by the United States shall be deducted out of the compensation of the said consul, or be collected by force of law as a debt due to the United States.

The Superintendent of the Consular Service to keep a record of books, furniture, &c., in possession of each consular officer.

SEC. 24. That all documents whatever, written by or under the direction of the Superintendent of the Consular Service, and issued by the Secretary of the Treasury, and purporting to be sealed with the seal of the Treasury Department, and signed by the Secretary of the Treasury, or any one authorized to act in the premises in his stead, shall be received in evidence, and shall be deemed to be issued or written by or under the direction of the Secretary of the Treasury, without further proof, unless the contrary be shown; and all documents, purporting to be certificates issued by the Secretary of the Treasury, in pursuance of this act, and to be sealed with the seal of the Treasury Department, or to be signed by the Superintendent of the Consular Service when so authorized, shall be deemed to be such certificates without further proof, unless the contrary be shown.

Certificates and documents purporting to be sealed or signed in a given manner to be received in evidence.

SEC. 25. That, subject to the provisions hereinafter contained, the following application shall be made of all moneys remitted by consular officers to the Treasury Department on account of any services or penalties under the provisions of this act:

Application of moneys and fines paid into the Treasury.

First. All consular fees received, or accounted for, to be carried to the account "for the compensation of consuls."

Secondly. All moneys received, or accounted for, as dues on account of relief of destitute American seamen at foreign ports to be carried to the account "for the relief of destitute American seamen."

Thirdly. All moneys received as fees for judicial services performed by consular officers, or as incident to any consular court, to be carried to an account to be known as "the fund for the maintenance of consular courts and jails," where permitted and required, and for the punishment of crime committed by citizens of the United States.

Fourthly. All moneys received from fines, hereinafter specified, to be carried to a fund to be known as the "fund for the payment of expenses of consular courts of inquiry, general examinations and investigations into the condition of the accounts and affairs of the consular service in foreign countries."

Fifthly. All moneys received from hospital dues collected under the provisions of this act shall be, as hereinafter provided, carried to the credit of the "fund for the relief of sick and disabled American seamen."

And the said accounts shall be kept in the Bureau of the Consular

Service and be under the direct supervision of the Superintendent of the Consular Service.

Consular and naval officers and officers of the customs may inspect documents and crews.

SEC. 26. That every consular officer, and every chief officer of customs of the United States, and every commissioned officer of any of the ships of the Navy of the United States, may, in cases where he has reason to suspect that the provisions of this act, or the laws for the time being relating to merchant seamen and to navigation, are not complied with, exercise the following powers, that is to say :

First. He may require the owner, master, or any of the crew of any American ship to produce any official log-books, or other documents, relating to such crew, or any member thereof, in their respective possession or control.

Secondly. He may require any such master to produce a list of all persons on board his ship, and take copies of such official log-books, or documents, or of any part thereof.

Thirdly. He may muster the crew of any such ship.

Fourthly. He may summon the master to appear and give any explanation concerning such ship or crew, or the said official log-books or documents. And if, upon requisition duly made by any person so authorized in that behalf as aforesaid, any person refuses or neglects to produce any such official log-book or document, as he is hereinbefore required to produce, or to allow the same to be inspected or copied as aforesaid, or impedes any such muster of a crew as aforesaid, or refuses or neglects to give any explanation which he is hereinafter required to give, or knowingly misleads or deceives any person hereinbefore authorized to demand any such explanation, he shall for each such offense incur a penalty not exceeding one hundred dollars.

The President may appoint an inspector.

SEC. 27. That the President of the United States, upon the recommendation of the Secretary of the Treasury, may, from time to time, whenever it may seem expedient so to do, appoint any person, who by previous experience may be suitable, an inspector, whose duty it shall be to report to the Secretary of the Treasury, under cover to the Superintendent of the Consular Service, upon the following matters; that is to say: Whether the provisions of this act, or any regulations made under or by virtue of this act, have been complied with, and upon any other matters relating to ships, seamen, consular and commercial affairs of the United States, not involving diplomatic questions, as may be designated in written instructions to such inspector.

Title and powers of inspector.

SEC. 28. That the inspector, as aforesaid, shall, during the time that he holds his appointment, be considered as an officer of the Bureau of the Consular Service, and shall be known as "the inspector of consulates of the United States." And for the purpose of carrying out the objects of his appointment, and to see that the provisions of this and other acts prescribing certain duties to be performed by consular officers are carried out, he shall have the following powers; that is to say:

First. He may administer oaths to American citizens, if not in conflict with local laws, or may, in lieu of requiring or administering an oath, require every person examined by him to make and subscribe a declaration of the truth of the statements made by him in his examination.

Secondly. He may require and enforce the production of all books, papers, or documents which he considers important for such purpose.

Thirdly. He may make examination into the accounts of such consular officers of the United States as may be designated in his instructions, and into all matters connected with the business of their said offices, and for the purpose of making said examinations shall have authority to administer oaths and take testimony, and shall have access to all the books and papers of all consular offices.

Compensation, &c., of inspector.

SEC. 29. That the inspector appointed as aforesaid shall be paid for his services the same compensation as is hereinafter allowed to consuls of the first class; that is to say: four thousand dollars per annum in addition to his actual necessary expenses, the same to be paid out of the sum appropriated for the compensation of consuls.

Reports of inspector to be submitted to Congress.

SEC. 30. That the President shall communicate to Congress, at the commencement of every December session, the name of the inspector appointed as aforesaid, and the amount paid to him, together with the reports of such inspector.

Penalty for obstructing inspector in the execution of his duty.

SEC. 31. That every person who willfully impedes such inspector, appointed as aforesaid, in the execution of his duty, whether on board any ship or elsewhere, shall incur a penalty not exceeding fifty dollars, the same to be recoverable before any justice of the peace in the United States or consular officer of the United States abroad.

CHAPTER THE SECOND.

CONSULAR SERVICE ORGANIZED, AND PROVISIONS GOVERNING THE PAYMENT OF SALARIES, RETURNS OF FEES, AND SO FORTH, AND PRESCRIBING THE GENERAL DUTIES AND POWERS OF CONSULAR OFFICERS.

SEC. 32. That in the construction of this act, and for the purposes of all other acts and parts of acts which shall remain in force after this act shall take effect, defining any of the powers, declaring any of the rights, prescribing any of the duties, or imposing penalty or punishment for any act of omission or commission of any consul-general, consul, vice-consul-general, or vice-consul, or allowing or enjoining the performance of any act, matter, or thing with or before any such officer, all such acts and parts of acts shall in all these several respects, so far as may be consistent with the subject-matter and context of the same, and with this act and the treaties of the United States, be deemed and taken to include and apply to all consular officers, as though all such officers were specially named therein; and the said official designations in contemplation of all such acts and parts of acts, and of this act, shall be deemed and taken to have the respective meanings hereinafter assigned to them, that is to say:

Construction of terms of this act as applied to consular officers.

First. "Consul-general" and "consul" shall be deemed and taken to denote full, principal, and permanent "consular officers" as distinguished from subordinates and substitutes.

Secondly. "Vice-consuls" and "consular agent" shall be deemed and taken to denote "consular officers" subordinate to such principals, exercising the powers and performing the duties within the limits of their consulates respectively, the former at the same ports or places, and the latter at ports or places different from those at which such principals are located respectively.

Thirdly. "Vice-consuls-general" and "vice-consuls" shall be deemed and taken to denote "consular officers," who shall be substituted temporarily to fill the places of "consuls-general" or "consuls" when they shall be temporarily absent or relieved from duty, and the term "consular officer," as used in this act, shall be deemed and taken to include all such officers as are mentioned in this section, and none others.

SEC. 33. That in the execution of the provisions of this act, and all other acts or parts of acts relating to commerce, revenue from imports, and other matters, in which certain duties, not political nor diplomatic in their nature, are prescribed, and in all matters of accounts, all consular officers and others employed in the consular service of the United States shall be taken to be officers of the Treasury Department of the United States, and under the jurisdiction and authority of the Secretary of the Treasury; but this shall not be construed to release any consular officer from performing any duties which may be required of him by the Secretary of State, and not inconsistent with the provisions of this act.

Consular officers to be taken as officers of the Treasury.

SEC. 34. That the principal officers of the consular service of the United States of America shall, for the time being, and until otherwise provided by act of Congress, consist of twelve consuls-general, four consuls of the first class, twenty-six consuls of the second class, thirty-one consuls of the third class, and eighty-three consuls of the fourth class, who shall be appointed by the President of the United States, by and with the advice and consent of the Senate, and who may be removed in the same manner; and the term of office of the said consuls-general and consuls shall be for and during the term of the President by whom they are appointed, and for as long thereafter as may be necessary to carry out the provisions of this act relating to appointments and to promotions in the consular service, unless sooner removed in the manner hereinbefore provided, but such limitation of the term of office shall not be construed to preclude any person then holding such office from re-appointment, but that the said officers, on the contrary, shall have the preference; and it shall be the general duty of such consuls-general and consuls to execute all the provisions of this act, and all rules or instructions which may, from time to time, be required of them by the Secretary of the Treasury.

Principal officers of the consular service.

General duty of such principal consular officers.

SEC. 35. That the President of the United States, in the same manner as hereinafter provided for the appointment of principal consular officers, may appoint two vice-consuls-general, one to reside at the port or place of official residence of the consul-general of the United States in Japan, and one to reside at the port or place of official residence of the consul-

Two salaried vice-consuls-general to be appointed.

general of the United States in China; and the term of office of the said vice-consuls-general shall be the same as provided for principal consular officers; but at any time, should the judicial powers exercised by the consuls-general aforesaid be taken from one or both of them, then the office of vice-consul-general, at such consulates-general as provided by this section, shall cease forthwith; and it shall be the duty of the said vice-consuls-general to perform such duties as may be assigned to them in the transaction of official business, and in all respects be under the same rules and restrictions as applied to full and principal consular officers.

Salaries of consular officers.

SEC. 36. That the annual salaries of the principal officers, vice-consuls-general, interpreters, marshals, constables, and others of the consular service, shall be as follows:

Two consuls-general, each seven thousand five hundred dollars.

Ten consuls-general, each six thousand dollars.

Four consuls of class one, each four thousand dollars.

Twenty-six consuls of class two, each three thousand dollars.

Thirty-one consuls of class three, each two thousand five hundred dollars.

Eighty-three consuls of class four, each two thousand dollars.

Two vice-consuls-general, each three thousand dollars.

Not to exceed sixteen interpreters, as follows:

Amoy, (China,) Bangkok, (Siam,) Canton, (China,) Chin-Kiang, (China,) Constantinople, (Turkey,) Foo-Chow, (China,) Hiogo and Osaka, (Japan, one,) each five hundred dollars.

Kanagawa, (Japan,) or at the official residence of the consul-general of Japan, one thousand five hundred dollars.

Muscat, (Africa,) and Nagasaki, (Japan,) each five hundred dollars.

Shanghai, (China,) two thousand dollars.

Swatow and Tien-Tsin, (China,) Tripoli, Tangier, and Tunis, (Barbary States,) each five hundred dollars.

Two marshals of consular courts, as follows:

Kanagawa, (Japan,) or the residence of the consul-general in the said country, and Shanghai, (China,) each one thousand dollars.

Constables of consular courts at Amoy, Canton, Chin-Kiang, Foo-Chow, Han-Kow, Swatow, and Tien-Tsin, in China; Hiogo and Osaka, (one,) and Nagasaki, Japan; and Constantinople, Turkey, ten in number, each three hundred dollars.

Jailers and other menials, when allowed, according to the rates usually paid for similar persons in the country in which they reside.

Schedule of consulates.

SEC. 37. That consuls-general, consuls, and vice-consuls-general, be appointed to the ports and places hereinafter specified, and shall be entitled to compensation for their services respectively at the rates per annum attached to the name of the consulate-general, or, if consulates, at the rate per annum allowed to each consulate of the class specified, that is to say:

CONSULATES-GENERAL.

Eighty-three in number.

And all consulates-general and consulates not herein specially continued shall be, and the same are hereby, abolished, to take effect at the date of the commencement of this portion of this act; and all consular officers at consulates so abolished are hereby required forthwith to turn over all property of the United States in their possession to the full and principal consular officer of the United States at the nearest consulate hereby continued, and take receipt therefor, and all such consular officers will receive the same, and in all matters pertaining thereto do and perform all that is or may be required for the security and protection of consular property of the United States; and all full and principal consular officers of the United States, at the time of the commencement of this act, receiving a stated salary and residing at any one of the consulates herein discontinued, shall be, provided they have complied with the provisions of this act respecting consular property, allowed their salary for sixty days after the commencement of this act, and thereafter all such consular officers, without further act or provision, shall cease to be consular officers of the United States, unless previously transferred to consulates continued by this act; and all other consular officers will continue in the performance of their duties until notified to the contrary by the Secretary of the Treasury.

SEC. 38. That such salaries shall be paid to such consuls-general, consuls, and vice-consuls-general, without fee or deduction, except for reasons to be clearly stated by the proper accounting officers of the Treasury of the United States, and shall be held and enjoyed by such consuls-general, consuls, and vice-consuls-general, as aforesaid, so long only as they shall be actually resident at the places at which they may be so appointed to reside, and discharging the duties of such their offices: *Provided, nevertheless,* That the President of the United States, by his approval for that purpose, to be issued through the Secretary of the Treasury, may grant to any such consul-general, consul, or vice-consul-general, as aforesaid, leave of absence from the place to which he may be so appointed as aforesaid, and such consul-general, consul, or vice-consul-general shall be entitled to receive such part only of the whole amount of his salary as hereinafter provided.

Terms on which salaries shall be granted.

SEC. 39. That no consul-general, consul, vice-consul-general, interpreter, marshal, or constable, receiving a fixed salary from the United States, nor shall any consular agent, be absent from his post or the performance of his duties for a longer period than ten days at any one time in any one quarter without a leave of absence previously obtained from the President of the United States; and no consular officer shall receive salary for the time which he may be absent from his post, by leave or otherwise, beyond the term of sixty days in any one year: *Provided,* That the time equal to that usually occupied in going to and from the United States, in case of the return, on leave, of such consular officer to the United States, may be allowed in addition to the said sixty days.

Leaves of absence and salaries.

SEC. 40. That the salaries granted aforesaid shall be taken and received by the said consuls-general, consuls, and vice-consuls-general, in lieu of and as a compensation for all salaries heretofore granted them, or any of them, by previous acts, and all fees of office, official or otherwise, heretofore demanded, received, or taken by them, of or from the masters or commanders of vessels of the United States, or of or from any other person or persons, for or in respect of any duties or services by such consuls-general or consuls done, performed, or rendered for or to any such masters or commanders, or other person or persons aforesaid; and that no such consuls-general, consuls, or vice-consuls-general as aforesaid shall, from and after the day of , eighteen hundred and seventy-three, be entitled for or by reason of, or on account of, any act, matter, or thing by him done or performed in the execution of such his office, or for or on account of any service by him rendered to any masters or commanders of ships or vessels of the United States, or to any other person or persons, in the execution of such his office, to ask, demand, have, receive, or take any fees, recompense, gratuity, compensation, or reward, or any sum or sums of money, save as hereinafter prescribed.

Salaries to be in lieu of salaries and fees formerly paid.

SEC. 41. That no consul-general, consul, or vice-consul-general herein embraced in the list of consuls-general, vice-consuls-general, and consuls of the first, second, third, and fourth classes, shall, while he holds his office, be interested in or transact any business as a merchant, factor, or other trader, or as a clerk or other agent for any such person, to, from, or within the port, place, or limits of his consulate, directly or indirectly, either in his own name or in the name or through the agency of any other person; and if appointed after this act shall take effect he shall, in his official bond, stipulate, as a condition thereof, not to violate this prohibition; and if appointed before, and retained in office after, this act shall take effect, he shall, within such reasonable time as the President of the United States shall prescribe, enter into a new official bond, with such stipulation as a condition thereof; and if any such consul-general, consul, or vice-consul-general shall violate such prohibition, he shall be liable to a penalty therefor for the use of the United States equal in amount to the annual compensation allowed to him as consul-general, consul, or vice-consul-general, which may be recovered in an action of debt at the suit of the United States, either directly for the penalty as such, against such consul-general, consul, or vice-consul-general, or upon his official bond, as liquidate damages, for the breach of such condition, against such consul-general, consul, or vice-consul-general, and his sureties, or any one or more of them; and in every such case all such actions shall be open to the United States for the collection of such penalty till the same be collected in some one of such actions; and every such penalty, when collected, shall be paid into the Treasury of the United States, and be carried to the fund as hereinbefore designated for fines, and such

Salaried consular officers not to transact business.

prohibition shall be applicable to all consuls-general, consuls, and vice-consuls-general receiving a stipulated salary from the United States, unless otherwise expressly provided by law.

Compensation
to be in full.

SEC. 42. That the compensation provided by this act shall be in full for all the services and personal expenses which shall be rendered or incurred by the officers or persons, respectively, for whom such compensation is provided, of whatever nature or kind such services or personal expenses may be, or by whatever treaty, law, or instructions such services or personal expenses so rendered or incurred are or shall be required; and no allowance, other than such as is provided by this act, shall be made in any case for the outfit or return home of any such officer or person; and no consular officer shall, nor shall any person under any consular officer, make any charge, or receive, directly or indirectly, any compensation, by way of commission or otherwise, for receiving or disbursing the wages to which any seaman of the United States shall be entitled, who shall be discharged in any foreign port or place, or for any money advanced to any such seaman who shall seek relief from any consulate of the United States; nor shall any consular officer, or any person under any consular officer, be interested, directly or indirectly, in any profit derived from clothing, boarding, or otherwise supplying or sending home any such seaman: *Provided*, That such prohibition as to profit shall not be construed to relieve or prevent any such officer, who shall be the owner or otherwise interested in any American vessel, from transporting in such ship any such seaman, or from receiving or being interested in such reasonable allowance as may be made for such transportation under the provisions of this or any other act or acts.

Allowance to be
made for rent of
consular offices
and expenses.

SEC. 43. That, in addition to the salaries hereinbefore granted to consuls-general and consuls, there shall be allowed, and each such consular officer is hereby authorized to receive, the sum of twenty per centum of his annual salary, to be expended by him for rent of a suitable office or offices, and for such office-expenses as may be found necessary, to include fuel, lights, cleaning, incidental assistance, and office-messenger, and all other expenses save necessary consular books, stationery, and postage, and the same must, nevertheless, be accounted for according to forms to be prescribed by the Secretary of the Treasury.

Allowance for
clerk-hire.

SEC. 44. That in the place of consular clerks heretofore allowed in certain cases and abolished by the provisions of this act, consular officers of the United States, respectively, who shall receive at their consulates, exclusive of the agencies within their jurisdictions, consular fees in any one year to exceed in the aggregate four thousand dollars, shall be allowed, out of the excess of such fees, the sum of fifteen per centum of such excess, to be expended in clerk-hire, but in no case shall such allowance be less than two hundred and fifty dollars, nor exceed the sum of three thousand five hundred dollars in any one year, at any one consulate; and no expenditures for clerk-hire shall be allowed except upon the written application of the consul-general or consul authorized to receive the same, as provided by this section, and shall give the name or names, place of residence, nationality, previous occupation, and any other information that may be required of him by the Secretary of the Treasury of and relating to the person or persons whom he desires to appoint, and the said application, if satisfactory, shall be granted by the Secretary of the Treasury, and at any time should the fees as herein prescribed be less than four thousand dollars at any of the said consulates, respectively, then without further act the said allowance shall forthwith cease.

The President
may appoint tem-
porary consuls.

SEC. 45. That the President of the United States may, if he shall think the commercial or other interests of the United States, at any port or ports, place or places, not hereinbefore specified, will be thus subserved, appoint, in the same manner as provided for the appointment of other principal consular officers, temporary consuls, who shall receive the compensation allowed to consuls of the fourth class, and shall be held bound by all the provisions of this act the same as permanent principal officers, and the name or names of such temporary consul or consuls shall be reported, together with the reason for such appointment, to Congress within thirty days after the commencement of each ordinary session, but no such appointments shall at any time be made while Congress is in session without previously requesting its approval, and any temporary consul appointed during the recess, and not authorized by Congress upon its first next session, shall cease to fill that office at the close of the said session.

SEC. 46. That all persons desiring appointments as consuls-general, salaried vice-consuls-general, consuls, and marshals, shall, before receiving an appointment in the consular service of the United States, appear, as hereinafter prescribed, before an examining board, to consist of three persons, namely, the Superintendent of the Consular Service, and one person to be designated by the Secretary of State, and one person to be designated by the Secretary of the Treasury; and it shall be the duty of such persons to assemble together at a convenient place in the city of Washington, as occasion may require, and then and there examine into the qualifications of such persons as may be authorized by the President of the United States to come before them for appointment into the said consular service; but such authority shall not be taken or construed to confer such appointment, nor in any case whatever, whether the appointment be made or otherwise, shall any allowance for expenses or compensation be made to such person or persons during the time of such examination, and after such examination of any candidates it shall be the duty of the Superintendent of the Consular Service to report in writing, for himself and the persons associated with him, the result of such examination, and forward the same to the Secretary of State and the Secretary of the Treasury, to be by them approved or disapproved, and the said report upon the qualifications of such candidate or candidates for the said consular service, with the remarks of the Secretaries of State and the Treasury, shall then be presented to the President of the United States for such action as he may see fit to take upon the application and examination of such candidate or candidates.

Certain consular officers, &c., to be examined.

SEC. 47. That in addition to the necessary qualification of candidates, to be determined by examination as hereinbefore prescribed, no person shall be appointed to any consular office unless he shall present sufficient testimonials of good character from at least three responsible persons of the community in which he lives, and shall present the certificate of his parents and minister, or parents and physician, or parents and friends, cognizant of the fact, that he is at least twenty-five years of age and has never shown any indications of unsound mind or decided predilections which would disqualify him for the proper performance and faithful discharge of such official duties as might be required of him.

Personal qualifications and age of candidates.

SEC. 48. That after the commencement of this portion of this act, as hereinafter prescribed, any candidate for place in the consular service of the United States, having passed the necessary examination and received the approval of the President of the United States, shall be nominated, as hereinbefore prescribed, to the office of consul of the fourth class, and shall be prohibited from holding any of the grades above that of fourth class, unless he shall have some time previously served, with good reputation, at least one year in the consular service, or shall have served at least one year in each of the classes below that to which he is appointed. In all cases of promotions of consular officers from one grade to another, the Superintendent of the Consular Service shall prepare, in a compendious form, a statement of the condition of the said officer's accounts, and every other evidence of efficiency and good conduct or otherwise, which may be in the possession of his Bureau, and submit the same to the Secretaries of State and the Treasury, to be used as prescribed for reports of examinations in cases of original appointment.

Consular officers to be promoted.

SEC. 49. That in the beginning of this act at the earliest practicable moment the consular offices hereinbefore provided, after deducting from the whole number of each class, two consuls-general, one consul of the first class, two of the second class, three of the third class, and four of the fourth class, who shall be appointed as hereinbefore and hereinafter prescribed for appointments by the President at large, shall be apportioned among all the States of the Union in fair proportion, and all the consulates so assigned to States shall be apportioned off by lot, or as the Secretaries of State and the Treasury may determine, and anything contained in this act in regard to promotions from grade to grade in the first appointment to the said consular offices shall have no effect, but after such offices shall all have been first filled, then and thereafter the section of this act relating to promotions in the consular service shall have full force and effect, but in no case shall any person appointed under the provisions of this section be excluded from examination as hereinbefore prescribed, and all present consular officers retained in the service shall receive a provisional appointment, and at the earliest practicable or convenient moment, to be determined by the President of the United States, the said officers or any part of them so retained in the consular

Rules to be followed respecting appointments in the beginning of this act.

service, shall be granted leaves of absence to return to the United States, and shall appear before the examining board aforesaid for examination, and if qualified for re-appointment receive a commission, to be issued the same as for Bureau officers of the Treasury Department; but in no case shall any allowance for expenses be made to such officers, nor any compensation except as hereinbefore provided for consular officers on leaves of absence.

Any member of Congress may present candidates for examination.

SEC. 50. That it shall be in the power of any member of Congress to present to the President of the United States the name of any person whom he shall think qualified, to be ordered before the examining board hereinbefore constituted, and such candidate shall be governed in all respects by the provisions of this act and the rules of the said board.

Consular officers not allowed to hold two offices.

SEC. 51. That no consul-general or consul shall be permitted to hold the office or to exercise the duties of consul-general or consul at any other consulate than that for which he is appointed.

Superiors responsible for subordinates.

SEC. 52. That all principal consular officers shall be held responsible officially and pecuniarily for the conduct of the subordinates whom they have recommended or permitted to remain under them, and any neglect to request, stating the reasons, the prompt removal of any such subordinate officer guilty of any violation of this act shall be taken as evidence of the complicity of such principal in such violation of this act, and he, in conjunction with the subordinate, shall be subject to all the pains and penalties as if he alone had committed the offense.

Salaried consular officers must be citizens of the United States.

SEC. 53. That no fixed compensation allowed under the provisions of this act for any consul-general, consul, vice-consul-general, or marshal, or any appropriation therefor, shall be applicable to the payment of the compensation of any person appointed to, or holding any such office after this act shall take effect, who shall not be a citizen of the United States; nor shall any other compensation be allowed in any such case; the provisions of this section, however, shall not apply to the payment of such portions of the salary of the principal officer to his substitute, as prescribed, during the temporary absence of such principal; and in no case shall a person be appointed to any subordinate office whatever in the consular service of the United States when a citizen of the United States can be found to perform the duties with equal ability and at the same rate of compensation.

Fees to go to unclassified consular officers.

SEC. 54. That consular officers not classified as hereinbefore specified, and who do not reside at the place of a full consulate, shall be entitled, as compensation for their services, to such fees as they may collect in pursuance of the provisions of this act, but such compensation shall not exceed one thousand dollars in any one year, and all fees received in excess of that amount must be paid into the Treasury of the United States, and it shall be the duty of the consul-general or superior consular officer within whose jurisdiction the said consular agency is situated, to report upon the desirability at any time of placing the said consular agency on the classified list of salaried consulates; and in no case shall any such unsalaried and unclassified consular officer, as long as he shall remain such, have the rank, title, or name of consul-general or consul, but he shall be designated and known by the title or name of vice-consul or consular agent of the United States.

Compensation of subordinate consular officers.

SEC. 55. That every vice-consul-general, excepting such two as hereinbefore excepted, and vice-consul, shall be entitled, as compensation for his services as such, to the whole or so much of the compensation of the principal consular officer, in whose place he shall be appointed, as shall be determined by the President of the United States, and the residue, if any, shall be paid to such principal consular officer; and every vice-consul not residing at the place of a full consulate and every consular agent shall be entitled, as compensation for his services, to such fees as he may collect in pursuance of the provisions of this act, to the amount of one thousand dollars, and the balance shall be remitted to the principal consular officer of the consulate within the limits of which such vice-consul or consular agent shall be appointed, to be accounted for and paid in full and without detention of any part thereof by the said principal consular officer, any previous law or rule to the contrary notwithstanding, into the Treasury of the United States; and it shall also be the duty of the said vice-consul or consular agent to send directly to the Secretary of the Treasury and the superior consul-general each a copy of the account of such excess of fees remitted to the principal; and the President shall have the power to subject any vice-consul-general, vice-consul, or consular agent, to the prohibition as to engaging in

trade as hereinbefore provided for principal consular officers, and may require from any of them such bond as is provided for the said principal consular officers, whenever he shall think the public interest will be promoted thereby.

SEC. 56. That there shall be no change of rank or compensation of consular officers, except as may be so authorized by Congress.

No change of rank or compensation except by act of Congress.

SEC. 57. That no person appointed after this act shall take effect, to any such office as is hereinbefore mentioned, shall be entitled to compensation for his services therein, except from the time when he shall reach his post and enter upon his official duties to the time when he shall cease to hold such office, and for such time as he shall be actually and necessarily occupied in receiving his instructions, not to exceed thirty days, and in making the transit between the place of his residence, when appointed, and his post of duty, and vice versa, respectively, at the commencement and termination of the period of his official service, for which he shall, in all cases, be allowed and paid as hereinbefore prescribed; and no person shall be deemed to hold any such office after his successor shall be appointed and actually enter upon the duties of his office at his post of duty nor after his official residence at such post shall have terminated if not so relieved; but no such allowance or payment shall be made to any consular officer not paid a fixed salary for the time so occupied in receiving instructions, or in such transit as aforesaid; nor shall any consular officer receiving a fixed salary be allowed compensation for the time so occupied in such transit at the termination of the period of his official service if he shall have resigned or been recalled therefrom for any malfeasance in office.

Commencement of duties.

SEC. 58. That for such time as any consular officer shall be authorized, pursuant to the provisions of any acts relating to that subject, to perform diplomatic functions, in the absence of the regular diplomatic officer in the country to which he shall be appointed, he shall be entitled, in addition to his compensation as such consular officer, to receive compensation for his services, while so authorized, at the rate allowed for a secretary of legation in such country; and, for the time being so appointed, shall, in all matters of duty, comply with all the laws, rules, and instructions governing diplomatic officers of the United States; but in no case shall the performance of such special duties interfere with, alter, change, or modify any of the duties of such consular officer under the provisions of this act.

Consular officers temporarily performing diplomatic duties.

SEC. 59. That no consular officer shall exercise diplomatic functions or hold any diplomatic correspondence or relation on the part of the United States in, with, or to the government or the country to which he shall be appointed or any other country or government, when there shall be in such country any officer of the United States authorized to perform diplomatic functions therein, nor in any case, unless expressly authorized by the President of the United States so to do.

Consular officers not to exercise diplomatic functions unless expressly authorized.

SEC. 60. That every consul-general and consul appointed before and retained in office after this act shall take effect, shall, without unnecessary delay, and every such officer, including salaried vice-consul-general, appointed after this act shall take effect, shall, before he receives his commission or enters upon the duties of his office, enter into a bond to the United States, with such sureties, who shall be permanent residents of the United States, as the Secretary of the Treasury shall approve, in a penal sum not less than two thousand nor more than ten thousand dollars, and in such form as the President of the United States shall prescribe, conditioned for the true and faithful accounting for, paying over, and delivering up of all fees, moneys, goods, effects, books, records, papers, and other property which shall come to his hands, or to the hands of any other person to his use, as such consul-general, consul, or vice-consul-general, under any law now or hereafter enacted. And for the true and faithful performance of all other duties now or hereafter lawfully imposed upon him as such consul-general, consul, or vice-consul-general, and in the case of certain consuls-general, consuls, and vice-consuls-general, hereinbefore mentioned, such bond shall contain, by way of further condition, the stipulation required by this act in regard to engaging in business; and all such bonds shall be deposited with the Secretary of the Treasury; and in no case shall the penalty of such bond be less than the annual compensation allowed to the officer entering into such bond; and the President shall be authorized to require a new or additional bond from any such consul-general or consul, in like form and in such penalty, within the limits aforesaid.

Certain consular officers to give bonds.

in amount, as he shall prescribe, whenever, in his opinion, the public good shall require it.

Subordinate unsalaried consular officers may be appointed.

SEC. 61. That the President be, and he is hereby, authorized to provide for the appointment of vice-consuls-general, vice-consuls, and consular agents, within each consular district, in such manner and under such regulations as he shall deem proper; but no compensation shall be allowed for the services of any such vice-consul-general or vice-consul beyond, nor except out of, the allowance made by this act for the principal consular officers in whose place such appointment shall be made, excepting the vice-consuls-general hereinbefore otherwise provided for and resident in Japan and China, and no vice-consul-general, except those as aforesaid, vice-consul or consular agent, shall be appointed otherwise than in such manner and under such regulations as the President shall prescribe, pursuant to the provisions of this act.

Jurisdiction of consuls-general.

SEC. 62. That the President be, and he is hereby, authorized from time to time to define the extent of country to be embraced within any consular-general and consulate; and the superior officer of such consulate-general shall have supervisory jurisdiction, as hereinafter provided, over all consulates and principal consular officers, or officers acting in their stead for the time being, residing within the limits so prescribed.

Jurisdiction of consuls-general, continued; list of consulates-general.

SEC. 63. That for the purpose of carrying into effect the provisions of this act granting consuls-general supervisory jurisdiction over consuls residing within their respective consulates-general, the following shall constitute the general limits of the consulates-general of the United States:

First. Consulate-general of the United States for the British Isles:

Official residence of the consul-general, Liverpool, England.

Jurisdiction, all consulates of the United States in England, Ireland, Scotland, and Wales, and islands adjacent thereto, and under the authority of the Crown of Great Britain.

Secondly. Consulate-general of the United States for the German Empire, Northern Russia, Norway and Sweden, and Denmark:

Official residence of the consul-general, Berlin, Prussia.

Jurisdiction over all consulates of the United States in the German Empire, and in the Russian Empire north of the latitude of Berlin, Germany, and in Norway and Sweden, and Denmark, and any islands adjacent to the coast and under the authority of such governments.

Thirdly. Consulate-general of the United States for France, the Netherlands, Belgium, Spain, Portugal, and Switzerland:

Official residence of the consul-general, Paris, France.

Jurisdiction, all consulates of the United States in France, the Netherlands, Belgium, Spain, Portugal, and Switzerland, including the islands of the Atlantic Ocean and in the Mediterranean Sea adjacent thereto, and subject to the dominion of any of the countries above mentioned, and also Algiers, in Africa.

Fourthly. Consulate-general of the United States for Austria, Italy, Greece, and Turkey:

Official residence of the consul-general, Vienna, Austria.

Jurisdiction, all consulates of the United States in Russia not included in the jurisdiction of the consul-general at Berlin, in Austria, Italy, Greece, and the Turkish dominions in Europe and Asia, and the islands adjacent thereto, part of or subject to the dominion of any of the said countries.

Fifthly. Consulate-general of the United States for Egypt:

Official residence of the agent and consul-general, Cairo, Egypt.

Jurisdiction, all consulates of the United States in Egypt and the islands and countries adjacent thereto and subject to the sovereignty of the Khedive, as permitted by the government of the Porte.

Sixthly. Consulate-general of the United States for British India:

Official residence of the consulate-general, Calcutta, Bengal.

Jurisdiction, all consulates of the United States in Hindostan, Ceylon, Burmah, Malay Peninsula, including Singapore and Siam, Sumatra, Java, and Borneo, and islands adjacent thereto and subject to the dominion of Great Britain or the Netherlands, or any other foreign powers or native ruler.

Seventhly. Consulate-general of the United States for China:

Official residence of the consul-general, Shanghai, China.

Jurisdiction, all the consulates of the United States in China, the island of Formosa, and on any other island or islands adjacent to the main-land of China, and under the dominion of the Emperor of China.

Eighthly. Consulate-general of the United States for Japan :

Official residence of the consul-general, Kanagawa, (Yokohama,) Japan.

Jurisdiction, all the consulates of the United States in the Japan Islands, at Hong-Kong, and on the Philippine Isles.

Ninthly. Consulate-general of the United States for British North America :

Official residence of consul-general, Montreal, province of Quebec.

Jurisdiction, all the consulates of the United States in British North America, including the Dominion of Canada and the islands adjacent thereto, and exclusive of British Columbia and Winnipeg.

Tenthly. Consulate-general of the United States for Brazil and the east coast of South America :

Official residence of the consul-general, Rio de Janeiro, Brazil.

Jurisdiction, all consulates of the United States in Brazil, Uruguay, and the Argentine Confederation, or any other power now or hereafter occupying the east coast of South America, and the islands adjacent to and under the jurisdiction of any such present or other governments.

Eleventhly. Consulate-general of the United States for the West Indies :

Official residence of the consul-general, Havana, Cuba.

Jurisdiction, all consulates of the United States on the islands of Cuba, Porto Rico, San Domingo, Jamaica, the Virgin Isles, the islands known as the Windward Group, French, Dutch, and British Guiana, the remaining islands of the Leeward Group, the Spanish Main, and the east coast of Mexico, and other countries or islands bordering on or lying within the Gulf of Mexico and the Caribbean Sea.

Twelfthly. Consulate-general of the United States for the west coast of Mexico, Central and South America :

Official residence of the consul-general, Panama, United States of Colombia.

Jurisdiction, all the consulates of the United States in Lower California, on the west coast of Mexico, Central and South America, and islands adjacent to and under the jurisdiction of any of the countries occupying the said limits.

The same supervisory powers as allowed to consuls-general shall also be exercised by the consul of the United States at Melbourne, Australia, and shall embrace all consulates of the United States in Australia, Tasmania, and New Zealand, and any of the consulates of the United States not included in the general division aforesaid shall be assigned to such consulate-general or consulate, or shall be permitted to communicate directly with the Treasury Department, as the President of the United States shall see fit to order, or the consular officer highest in rank in isolated places may be charged for the time being with supervisory powers over consulates of the United States in his vicinity.

SEC. 64. That the supervisory powers exercised by consuls-general and consuls, in certain cases, shall extend to matters of receiving all accounts, returns, and reports of consular officers within their jurisdictions respectively, to examine the same, and to transmit them with any remarks of their own to the Secretary of the Treasury; to forward all complaints which may come to their knowledge respecting consular officers within their jurisdictions respectively; they shall recommend any changes or improvements in any branch of the consular duties, and may perform any other supervisory or recommendatory acts not in conflict with the treaties or conventions, if any, of the countries within their jurisdictions respectively, with the United States, or any customs, laws, or usages of the said countries; but in no case shall such consuls-general or consuls leave their posts for the purposes above stated unless specially authorized so to do by order or instruction in writing from the President of the United States.

Extent of supervisory powers.

SEC. 65. That it shall be the duty of the consul-general to report in writing to the Secretary of the Treasury the limits which, in his judgment, should constitute the boundaries of the respective consulates under his supervisory jurisdiction; and the boundaries so prescribed, before taking effect, shall be sanctioned by the President of the United States, and shall so remain in force, unless sufficient reason at any future time should be given, in the manner above stated, to warrant any change; in cases of all consulates not under the supervision of a consul-general or ranking principal consular officer, the extent of country to be embraced in such consulates shall be defined by the President upon the recommendation of the Secretary of the Treasury.

How consular jurisdictions to be settled.

Certain fees allowed to be taken.

SEC. 66. That it shall and may be lawful for all consuls-general and consuls appointed by the President of the United States, by and with the advice and consent of the Senate of the United States, or any other consular officer authorized by this act and resident within the dominions of any sovereign or any foreign state or power at peace with the United States, to charge and receive the several fees particularly mentioned in the tables which may be from time to time prescribed for and in respect or on account of the several matters and things and official acts and deeds particularly mentioned, and to be applied as hereinafter mentioned; and it shall and may be lawful for the President of the United States, by any order or orders to be by him made, by and with the advice and consent of the Congress of the United States, from time to time, as occasion may require, to increase or diminish, or wholly to abolish, all or any of the fees aforesaid, and to establish and authorize the payment of any greater or smaller or new and additional fees or fee, for or in respect of the several matters and things mentioned in the said schedules, or any of them, or for and in respect of any other matters or things or matter or thing, to be by any such consuls-general or consuls done or performed in the execution of such their said offices.

Penalty on consular officers demanding more fees than specified in the schedule, or specified in any order.

SEC. 67. That in case any consul-general or consul appointed by the President of the United States as aforesaid, or any other consular officer permitted by the provisions of this act to collect fees, shall, by himself or by any person authorized thereto in his behalf, ask, demand, receive, take, or accept, for or by reason or on account of any matter or thing by him done or performed in the execution of such his office, or for or on account or under pretense, or by reason of any service or duty by him rendered, done, or performed in such his office for any person or persons whomsoever, any other or greater fee than is mentioned and specified in the schedule of fees, or than shall be sanctioned and specified in or by any such order or orders as aforesaid, the person or persons so offending shall forfeit and become liable to pay to the Government any sum not exceeding the amount of the salary of such person for one year, nor less than the twelfth part of such annual salary, at the discretion of the court in which such penalty may be recovered; and shall, moreover, for any such offense forfeit such his office and forever after become incapable of serving in the same or the like capacity. And it shall be the duty of all consular officers to give receipts for all fees which shall be collected for their official services respectively, expressing the particular services for which the same were collected, and, if practicable, in case of unlawful charge as aforesaid, the Secretary of the Treasury is hereby authorized to retain, out of the compensation of such consular officer, the amount of such overcharge and of such penalty, and charge the same to such officer, or recover the balance by due process of law, and thereupon to refund such unlawful charge and pay a moiety of such penalty to the person who shall have given the information.

Tables of fees to be exhibited at custom-houses in the United States.

SEC. 68. That a printed copy of the tables of fees allowed by this act, or which may or shall be sanctioned or allowed by subsequent acts, passed upon the recommendation of the President of the United States, shall be exhibited in a conspicuous manner for the inspection of all persons in all custom-houses in the several ports and harbors under the jurisdiction of the United States; and that printed copies thereof shall, by the collector or other chief officer of customs in all such ports and harbors as aforesaid, be delivered gratuitously, and without fee or reward, to every master or commander of any ship and vessel clearing out of any such port or harbor and demanding a copy thereof.

Tables of fees to be exhibited in all consular offices of the United States in foreign countries.

SEC. 69. That a copy of the said schedule or table of fees, or which may be hereafter established and authorized as aforementioned, shall be hung up and exhibited in a conspicuous place in the public offices of all consuls-general and consuls, or other consular officers appointed as aforesaid, in the foreign ports or places to which they may be so appointed, for the inspection of all persons interested therein; and any consul-general, or consul, or other consular officer omitting or neglecting to exhibit any such copy of the said schedules in such public office, or refusing to permit the same to be inspected by any person or persons interested therein, shall, for every such offense, forfeit and pay a sum of money not exceeding one-half the amount of salary, or income from fees if unsalaried, of such person, for one year, nor less than the twelfth part of such annual salary or income, at the discretion of the President of the United States.

SEC. 70. That all fees collected by consuls-general, consuls, vice-consuls-general, and vice-consuls appointed to perform their duties, or by any other person in their behalf, shall be accounted for to the Secretary of the Treasury, and held subject to his draft or other directions, and all such vice-consuls and consular agents as are allowed for their compensation the whole or any part of the fees which they may collect pursuant to the provisions of this act, shall make returns of all such fees as they or any other persons in their behalf shall so collect, in such manner as the Secretary of the Treasury shall prescribe, and a report of the rates or tariff of fees in use, and all such fees as shall be so collected, accounted for, and reported, shall be reported annually to Congress, giving the same in connection with the name of the consulate at which received, and the name of the consular officer by whom received and accounted for; and if any consul-general, consul, or any vice-consul-general, or vice-consul appointed to perform the duty of any such officer, shall omit to collect any fees which he shall be entitled to charge pursuant to the provisions of this act for any official service, he shall be liable to the United States therefor, as though he had collected the same, unless, upon good cause therefor, the Secretary of the Treasury shall think proper to remit the same; and every consular officer shall number all receipts given by him for fees received for official services in the order of their dates, beginning with number one at the commencement of the period of his service, and on the first day of January in every year thereafter during his term of office; and he shall keep a book in which he shall register all fees so received by him, in the order in which they shall be received, specifying in such register each item of service, and the amount received therefor, from whom, and the dates when received, and if for any service connected with any ship or vessel, the name thereof, and indicating what items and amounts are embraced in each receipt given by him therefor, and numbering the same according to the number of the receipts respectively, so that the receipts and register shall correspond with each other; and he shall, in such register, specify the name of the person for whom and the date when he shall grant, issue, or verify any passport, certify any invoice, or perform any other official service in the entry of the receipt of the fees therefor, and also number each consular act so receipted for with the number of such receipt, and as shown by such register; and it shall be the duty of all owners, agents, consignees, masters, and commanders of ships to whom any receipt for fees shall be given by any consular officer to furnish a copy thereof to the collector or chief officer of customs of the district in which such ships shall first arrive on their return to the United States; and it shall be the duty of every such collector or chief officer of customs to forward to the Secretary of the Treasury, under cover to the Superintendent of the Consular Service, all such copies of receipts as shall have been so furnished to him, and also a statement of all certified invoices which shall come to his office, giving the dates of the certificate, and the names of the persons for whom, and of the consular officers by whom, the same were certified; and every consular officer, in rendering his account or report of fees received, shall furnish a full transcript of the register which he is hereby required to keep, under oath or affirmation that the same is true and correct, and that the same contains a full and accurate statement of all fees received by him, or for his use, for his official services as such consular officer, to the best of his knowledge, during the period for which the same shall purport to be rendered, and that such oath or affirmation may be taken before any person having authority to administer oaths and affirmations at the port or place where such consular officer is located; and if any such consular officer shall willfully and corruptly commit perjury in any such oath or affirmation, within the intent and meaning of this or any act of Congress now or hereafter made, he may be charged, proceeded against, fined, and convicted, and dealt with in the same manner in all respects as if such offense had been committed in the United States; and the consular officer or officers so offending shall forfeit and become liable to pay to the Government any sum not exceeding the amount of the salary of such persons for one year, nor less than a fifth part of such annual salary, and be imprisoned not to exceed three years, at the discretion of the court in which such penalty may be recovered, and any consular officer or person convicted for any such offense shall forfeit such his office, and forever after become incapable of serving in the same or the like capacity.

Fees to be accounted for.

Receipts to be given for fees.

Copies of receipts of fees to be furnished to collectors by masters, &c.

Penalty of perjury.

Fees taken by unclassified consular officers to be accounted for.

SEC. 71. That all fees collected by any consular officers of the United States not classified as hereinbefore specified, or any one appointed to perform the duties of their said offices in their behalf, shall be accounted for to the Secretary of the Treasury in the same mode and manner as hereinbefore provided for principal consular officers, and when the fees so collected by any such consular officer amount to more than one thousand dollars in any one year, over and above the expenses of office-rent and clerk-hire, to be approved by the Secretary of the Treasury, of which return shall be made to the Secretary of the Treasury, the excess for that year shall be paid to the principal under whose jurisdiction such consular officer resides, and the said principal officer shall remit the same to the Secretary of the Treasury in the same mode and manner as provided for principal consular officers.

Reducing consular fees on certain vessels.

SEC. 72. That American vessels running regularly by semi-weekly, weekly, or monthly trips, or otherwise, to or between foreign ports, shall not be required to pay fees to consular officers authorized to receive the same for more than four trips in a year, anything in the provisions of this act or other acts respecting consular fees to the contrary notwithstanding.

Fees; how to be collected.

SEC. 73. That all fees collected for and in behalf of the United States in pursuance of this act shall be collected in the coin of the United States, or at its representative value in exchange.

List of returns and accounts to be sent to the Secretary of the Treasury.

SEC. 74. That the following returns and accounts be, and the same are hereby, required to be sent by consuls-general, consuls, and other consular officers so required to do, subject to the pains and penalties hereinbefore or hereinafter prescribed for any delay, to the Secretary of the Treasury, in the manner as hereinbefore prescribed, that is to say:

First. Returns to be sent quarterly from consulates of the United States:

Register of official letters received.

Register of official letters sent.

Record of Treasury fees, with oath or affirmation.

Fees received on account of vessels.

Fees not so received, stating under what heads.

Arrival and departure of American vessels.

List of seamen shipped, discharged, or deceased at the consulate.

Statement under oath of relief to seamen.

Return of dues received on account of fund for the relief of destitute American seamen aboard.

Hospital dues collected.

List of deceased American citizens.

Secondly. Annual returns to be sent from consulates of the United States:

Of names of persons employed at the consulate.

Nationality and amounts paid.

Of furniture and property at the consulate.

Thirdly. Quarterly accounts to be sent from consulates of the United States:

Account-current, to be accompanied by vouchers and certificates.

Salary account, with certificate of non-absence and vouchers, in case of sale of drafts.

Statement of allowances and expenditures for rents, and miscellaneous expenses, on account of consulates and consular duties, with vouchers, and in accordance with the provisions of this act.

Fourthly. Annual reports to be sent from consulates of the United States:

By the consuls-general, giving the general condition of the consular service within their jurisdictions respectively as required by any of the provisions of this act.

By the consuls-general and consuls of commerce, navigation, and industry at the ports or places of their official residence respectively, and on all other matters, and at times and in the form required by the provisions of this act.

And all the returns, accounts, and reports above required shall be forwarded by all consular officers making the same, except as may be otherwise specially ordered by the Secretary of the Treasury, to the consul-general or superior consular officer in whose jurisdiction they reside, and it shall be the duty of such consuls-general or superior consuls to acknowledge the receipt of the same to the principal consular officer from whom received, and shall forward all such returns, accounts, and

reports, with any comments they may wish to make, forthwith to the Secretary of the Treasury.

SEC. 75. That every consular officer of the United States shall keep a detailed list of all seamen shipped and discharged by him, specifying their names and the names of the vessels on or from which they shall be shipped and discharged, respectively, and the payments, if any, made on account of each so discharged, and also of the number of the vessels arrived and departed, and the amounts of their registered tonnage, and the number of their seamen, and of those who are protected, and whether citizens of the United States or not, and, as nearly as possible, the nature and value of their cargoes, and where produced, and make returns of the same, with their accounts and other returns, to the Secretary of the Treasury, as above prescribed.

List of seamen to be kept.

SEC. 76. That all consular books of record, and invoice-books, and accounts, in any consulate of the United States at any foreign port or place, shall be open to free inspection by all persons having business with the consulate, and any consular officer asking any money, gift, or fee for such facilities shall, upon the complaint of any responsible party, be treated with all the penalties provided for neglect to post list of consular fees in a conspicuous place in the consulate, so that it may be examined by all persons.

Consular books, records, &c., to be open to public inspection by persons interested.

SEC. 77. That the Secretary of the Treasury be, and is hereby, authorized to provide, at the public expense, all such stationery, blanks, record and other books, safes, seals, presses, flags, flag-staffs, arms, and books of instruction, as he shall think necessary for the several consulates of the United States in the transaction of their official business; and shall allow consuls-general and consuls who receive a fixed and stated salary an additional sum of twenty per centum, as hereinbefore prescribed, for rent of office or offices, and for all office expenses, and to prescribe such regulations, and make and issue such orders and instructions, not inconsistent with the Constitution or any law of the United States in relation to the duties of all consular officers, the transaction of their business, the rendering of accounts and returns, the payment of salaries, the safe-keeping of the archives and public property in the hands of all such officers, the communication of information, and the procurement and transmission of the products of the arts, sciences, manufactures, agriculture, and commerce, from time to time, as he may think conducive to the public interests; and it shall be the duty of all such officers to conform to such regulations, orders, and instructions; and it shall be the duty of the Secretary of the Treasury to publish official notifications, from time to time, of such, communicated to him by such consular officers, as he may deem important to the public interests, in such newspapers, not to exceed three in number, as he may select, and report to Congress, as hereinbefore prescribed, at least once a year, such information on all subjects which shall be so communicated to him as he may deem valuable for public information.

Blanks, &c., to be furnished.

SEC. 78. That it shall be the duty of every consular officer of the United States to furnish to the Secretary of the Treasury, as often or at such times as shall be required, the prices-current of all articles of merchandise usually exported to the United States from the port or place in which he shall be located.

Prices-current, &c., to be furnished to the Secretary of the Treasury.

SEC. 79. That in case of the sale or transfer of any vessel of the United States in a foreign port or water, the consul-general, consul, vice-consul general, vice-consul, or consular agent of the United States, within whose consulate, district, or consular agency such sale or transfer shall have been made, or in whose hands the papers of such vessels shall be, be, and he is hereby, authorized and required to collect of the master or agent of such vessel all moneys that shall have become due to the United States, under and by virtue of the act entitled "An act for the relief of sick and disabled seamen," approved July sixteenth, seventeen hundred and ninety-eight, and an act entitled "An act to reorganize the marine hospital service, and to provide for the relief of sick and disabled seamen," approved June twenty-ninth, eighteen hundred and seventy, and shall remain unpaid at the time of such sale or transfer; and that any of the consular officers aforesaid be, and they are hereby, instructed and required to retain possession of the papers of such vessel until such moneys shall have been paid as herein provided, and in default of which such sale or transfer shall be void excepting as against the vender; and it shall also be the duty of the consular officers aforesaid, upon the first arrival after the first day of January in each year of any American vessel in any of the ports at which they reside, to examine the accounts of

Collection of hospital dues.

the seamen of the said vessel, and to collect the amount due to the thirty-first day of December of the year last next preceding of unpaid hospital dues required by the act of July twenty-ninth, eighteen hundred and seventy, aforesaid, by the said vessel, since her departure, if within the year aforesaid, from the United States, or for the whole year if she have not touched during that time at any port within the United States and paid the same; and the said consular officer shall give a receipt in form prescribed by the Secretary of the Treasury to the master of the vessel that the said dues had been paid, and it shall be the duty of the said consular officers to account for and remit quarterly to the Secretary of the Treasury the sums so collected by them respectively under the provisions of the said act of eighteen hundred and seventy, to be carried to "the fund for the relief of sick and disabled seamen," and the said returns shall be accompanied with proper vouchers on forms to be furnished by the Secretary of the Treasury; but the provisions of this section, as far as regards settlements with consular officers, shall not apply to American ships making semi-weekly, weekly, or monthly voyages between a port in the United States and a foreign port, except in case of the sale or transfer of such vessel in a foreign port or water.

Oaths may be administered by consuls.

Penalty of perjury.

SEC. 80. That from and after the passage of this act it shall and may be lawful for any and every consul-general, consul, or other consular officer appointed as aforesaid at any foreign port or place, whenever he shall be thereto required, and whenever he shall see necessary, to administer at such foreign port or place any oath, or take any affidavit or affirmation or deposition from any person or persons whomsoever; and also to do and to perform at such foreign port or place all and every notarial acts and act which any notary public could or might be required and is by law empowered to do within the United States; and every such oath, affidavit, affirmation, or deposition, and every such notarial act administered, sworn, affirmed, had, or done by or before such consul-general, consul, or other consular officers and certified under his hand and seal of office, shall be as good, valid, and effectual, and shall be of like force and effect to all intents and purposes as if any such oath, affidavit, or notarial act respectively had been administered, sworn, affirmed, had, or done before any justice of the peace or notary public in any part of the United States, or before any other legal or competent authority of the like nature; and if any person shall willfully and corruptly commit perjury, or by any means procure any person to commit perjury, in any such oath, affirmation, affidavits, or depositions, within the intent and meaning of any acts of Congress now or hereafter made, such offender may be charged, proceeded against, tried, convicted, and dealt with in the same manner, in all respects, as if such offense had been committed in the United States, before any officer duly authorized therein to administer or take such oath, affirmation, affidavit, or deposition, and shall be subject to the same punishment and disability therefor as are or shall be prescribed by any such act for such offense; and any document purporting to have affixed, impressed, or subscribed thereto or thereon the seal and signature of the officer administering or taking the same in testimony thereof shall be admitted in evidence without proof of any such seal or signature being genuine or of the official character of such person, unless the contrary be proved; and if any person shall forge any such seal or signature, or shall tender in evidence any such document with a false or counterfeit seal or signature thereto, knowing the same to be false or counterfeit, he shall be deemed and taken to be guilty of a misdemeanor, and, on conviction, shall be imprisoned not exceeding three years nor less than one year, and fined a sum not to exceed three thousand dollars, and may be charged, proceeded against, fined, convicted, and dealt with therefor in the district where he may be arrested or in custody.

Consular officers may receive protests, declarations, &c.

Copies to be taken as originals.

SEC. 81. That all consular officers of the United States shall have the right in the ports or places to which they are or may be severally appointed, of receiving the protests or declarations which such captains, masters, crews, passengers, and merchants as are citizens of the United States may respectively choose to make there; and also such as any foreigner may choose to make before them, relative to the personal interest of any citizens of the United States. And the copies of the said acts, duly authenticated by the said consuls or vice-consuls, under the seal of their consulates, respectively, shall receive faith in law, equally as their originals would, in all courts of the United States.

SEC. 82. That if any consular officer shall knowingly and falsely certify to any invoice, or other paper to which his certificate is by law authorized or required, he shall, on conviction thereof, in any court of competent jurisdiction, forfeit and pay a fine not exceeding ten thousand dollars, at the discretion of the court, and be imprisoned for a term not exceeding three years, at the like discretion, to forfeit his office, and be forever after incapacitated from holding that or any similar office.

Penalty of false certificates to invoices and other papers.

SEC. 83. That if any consular officer shall falsely and knowingly certify that property belonging to foreigners is property belonging to citizens of the United States, he shall, on conviction thereof, in any court of competent jurisdiction, forfeit and pay a fine not exceeding ten thousand dollars, at the discretion of the court, and be imprisoned for any term not exceeding three years, and forfeit his office, and be forever after disqualified from holding the same or any similar office.

Penalty of false certificate of ownership.

SEC. 84. That if any consular officer shall grant a passport or other paper certifying that any alien, knowing him or her to be such, is a citizen of the United States, he shall, on conviction thereof in any court of competent jurisdiction, forfeit and pay a fine not exceeding one thousand dollars and forfeit such his office, and forever after become incapable of serving in the same or like capacity. Nor shall any consular officer, subject to like penalty for violation of the same, issue or verify any passport or other instrument in the nature of a passport to or for any citizen of the United States, or to or for any person claiming to be or designated as such in such passport or verification, if a diplomatic representative of the United States resides at the same place, unless such representative be absent from such place; and it shall be the duty of all consular officers to perform and carry out all such instructions which they may from time to time receive from the Secretary of State in regard to the granting, issuing, and verification of the passports.

Penalty for illegally issuing passport, &c.

SEC. 85. That all powers of attorney executed after the passage of this act, in a foreign country, for the transfer of any stock of the United States, or for the receipt of interest thereon, shall be verified by the certificate and seal of a consular officer of the United States, if any there be, at the place where the same shall be executed.

Relating to powers of attorney.

SEC. 86. That if any consular officer shall willfully neglect or omit to perform promptly any duty imposed upon him by this or any other act, or by any order or instruction, made or given in pursuance of this or any other act, or shall be guilty of any willful malfeasance or abuse of power, or any corrupt conduct in his office, he shall be liable to all persons injured by any such neglect, or omission, malfeasance, abuse, or corrupt conduct, for all damages occasioned thereby; and for all such damages by any such officer, he and his sureties upon his official bond shall be responsible thereon to the full amount of the penalty thereof, to be sued in the name of the United States for the use of the person or persons so injured: *Provided*, That such suit shall in no case prejudice, but shall be held in entire subordination to the interests, claims, and demands of the United States as against such officer, under such bond, for every willful act of malfeasance or corrupt conduct in his office; and if any such officer shall refuse to pay any draft, order, or warrant which may be drawn upon him by the proper officer of the Treasury Department for any public moneys of the United States in his hands, or for any amount due from him to the United States, whatever the capacity in which he may have received or may hold the same, or to transfer or disburse any such moneys promptly upon the legal requirement of any authorized officer of the United States, he shall be deemed and taken to be guilty of a misdemeanor, and on conviction thereof shall be punished by imprisonment not to exceed ten years nor less than one year, or be fined not to exceed three thousand dollars, nor less than five hundred dollars, or both, at the discretion of the court; and any such officer so offending may be charged, proceeded against, tried, convicted, and dealt with in any district in which he may be arrested or in custody, and also upon conviction for any of the causes or offenses herein mentioned, the said consular officer shall forfeit his office, and forever after become incapable of serving in the same or the like capacity.

Neglect of duty.

SEC. 87. That any consular officer of the United States who shall willfully neglect to render true and just quarterly accounts and returns of the business of his office, and of moneys received by him for the use of the United States, or who shall neglect to pay over any balance of such

Penalty for neglect to render accounts.

moneys which may be due to the United States at the expiration of any quarter, before the expiration of the next succeeding quarter, shall be deemed guilty of embezzlement of the public moneys, and shall, on conviction thereof before any court of the United States having jurisdiction of like offenses, be punished by imprisonment not exceeding one year, and by a fine not exceeding two thousand dollars, and shall be forever disqualified from holding any office of trust or profit in the United States.

Consular courts
of inquiry.

SEC. 88. That where complaints have been made against any bonded consular officer of the United States, and in the judgment of the Secretary of the Treasury the same are of sufficient importance to warrant an investigation, it shall be the duty of the Secretary of the Treasury to direct the Superintendent of the Consular Service to call a consular court of inquiry, and the said court shall sit at the port or place of residence of the consular officer complained against, and shall be composed of the consul-general in whose jurisdiction the consulate is situated, and two principal consular officers nearest at hand; or should any such officers be disqualified for any cause soever, then the composition of the court shall be designated by the Secretary of the Treasury, but always to be composed of disinterested consular officers of the United States residing nearest to the port or place of residence of the consul to be examined; and for the purposes of carrying out the object of their examinations, the officers composing the court shall take oaths and depositions, and have all the powers of a consular inspector and consular officers, as herein provided, over other citizens of the United States.

Penalty for
using the American
flag except
according to law.

SEC. 89. That any consular officer of the United States permitting, under any circumstances whatever, the use of the American flag on any native-built ship, vessel, or boat, engaged in carrying anything for sale or passengers for hire in any of the countries of Asia or Africa or the Turkish dominions, or on any ship, vessel, or boat running in the rivers, seas, or waters of the said countries, for the purpose of evading any treaty, commercial convention, local law, or custom, shall be deemed amenable to the laws of the United States for the punishment of piracy, and may be prosecuted on the complaint of the government of such countries, the minister of the United States, or any officer of the Navy thereof; and it shall be the duty of all officers of the Navy of the United States to demand of the local authorities of the port, if in port, or the nearest local authority if on a river, the seizure of all such ships, vessels, or boats, and if on the high seas then to seize the said ships, vessels, or boats themselves, and report the same, with all the circumstances, to the minister of the country in which such seizure was made, and to the Secretary of the Navy, for transmission to the Secretary of the Treasury; but the provisions herein prescribed shall not apply to small boats belonging to consulates of the United States or citizens of the United States and registered in the consulates of the United States at the port or place, and used for pleasure, or the convenience of personal use, and not within the intent and spirit of this section.

Revision of sec-
tion 4 of the act
prohibiting the
coolie trade.

SEC. 90. That the fourth section of the act entitled "An act to prohibit the coolie trade by American citizens in American vessels," approved February nineteenth, eighteen hundred and sixty-two, shall be so amended that nothing contained in the said act shall be deemed or construed to apply to or affect any free and voluntary emigration of any Chinese subjects, or to any vessel carrying such persons as passengers on board the same; and it shall be the duty of the consular officer of the United States residing at the port from which the vessel may take departure to go on board the said vessel, or otherwise personally satisfy himself that the emigration from such port or place was voluntary, and shall for that purpose see that a list of such passengers be made in accordance with Form one, Schedule A, hereunto appended, giving the number, name in Chinese characters, and translation of name of each such emigrant, and that the emigration is voluntary, and the same shall be verified by the interpreter in the presence of the consular officer, and be certified by the said consular officer according to Form two, Schedule A, hereunto appended; and the said consular officer shall, in order to secure the faithful performance of the requirements of the said act, require of the agent of the vessel, and the captain of the vessel, a compliance with the requirements of Forms three and four, Schedule A, hereunto appended; the consular officer shall then give to the master of the vessel a certificate in accordance with Form five, Schedule A, hereunto appended; and thereafter permit the vessel to depart.

SEC. 91. That it is and shall be the duty of all consular officers of the United States to pay the foreign postage of such letters, destined to the United States, as may be detained at the ports of foreign countries for the non-payment of postage, and to forward the same inclosed to the Superintendent of the Consular Service for transmission to their destination; and in each and every case the amount of postage paid by such consular officer shall be marked on the letter, and the amount thereof shall be collected in the United States, as other postage, on the delivery of the letters, and be repaid to the said consular officer, or be credited on his account in the Bureau of the Consular Service, Treasury Department, but no such amounts shall be paid or credited as aforesaid unless specified in the said consular officer's quarterly accounts for postage, according to the form prescribed by the Secretary of the Treasury for postage of consular officers.

Unpaid letters for the United States at foreign ports to be forwarded to the Superintendent of the Consular Service.

SEC. 92. That the consular officers, whether principal, temporary, substituted, or subordinate, are hereby, either of themselves or by any other person or persons on their behalf, prohibited from entering into any correspondence or communication in regard to the public affairs of any foreign government with any private person, newspaper, or periodical, or otherwise than with the proper officers of the United States, nor shall they recommend any person at home or abroad for any employment of trust or profit under the government of the country in which they officially reside; nor ask nor accept for themselves, or any other person, any present, emolument, pecuniary favor, office, or title of any kind from any such government.

Consular officers not to correspond for newspapers, &c.

SEC. 93. That so much of the act entitled "An act making appropriations for the consular and diplomatic expenses of the Government for the year ending thirtieth June, eighteen hundred and sixty-five, and for other purposes," approved June twentieth, eighteen hundred and sixty-four, which reads, "And the consul-general at Alexandria shall have the name and title of agent and consul-general," shall be so changed as to give the same name and title to the consul-general for Egypt, whose official residence, by the provisions of this act, has been transferred to Cairo, in the said country.

The agent and consul-general in Egypt.

SEC. 94. That it shall be the duty of consular officers of the United States, where the laws of the country permit, to take possession of the personal estates left by any citizen of the United States, other than seamen belonging to any ship or vessel, who shall die within their consulate, leaving there no legal representative, partner in trade, or trustee by him appointed to take care of his effects: they shall inventory the same, with the assistance of two merchants of the United States, or, for want of them, of any others at their choice; shall collect the debts due to the deceased in the country where he died, and pay the debts due from his estate which he shall have there contracted; shall sell at auction, after reasonable notice, such part of the estate as shall be of a perishable nature, and such further part, if any, as shall be necessary for the payment of his debts, and at the expiration of one year from his decease the residue; and the balance of the estate they shall transmit to the Treasury of the United States, to be holden in trust for the legal claimants. But if at any time before such transmission the legal representative of the deceased shall appear and demand his effects in their hands, they shall deliver them up, being paid their fees, and shall cease their proceedings. For the information of the representative of the deceased, it shall be the duty of the consul-general, consul, or vice-consul authorized to proceed as aforesaid in the settlement of his estate, immediately to notify his death in one of the gazettes published in the consulate, and also to the Secretary of the Treasury, that the same may be notified in the State to which the deceased shall belong; and he shall also, as soon as may be, transmit to the Secretary of the Treasury an inventory of the effects of the deceased taken as before directed.

Consular officers to take possession of estates of American citizens other than seamen dying abroad, if the laws permit.

Notification of death; by whom made and how.

SEC. 95. That if any citizen of the United States who shall die abroad shall, by any lawful testamentary disposition, leave special directions for the custody and management by the consular officer of the United States of the port or place where he shall reside of the personal property of which he shall die possessed in such country, and not in violation of any treaty or convention with the United States, or local law, custom, or usage, it shall be the duty of such officer, so far as the law of such country will permit, strictly to observe such directions; and if any such citizen so dying shall, by any lawful testamentary disposition, have appointed any other person or persons than such officer to take charge of

Duties of consular officers in estates of citizens of the United States in certain cases dying abroad.

and manage such property, it shall be the duty of such officer, whenever required by such person or persons so appointed, to give his official aid in whatever way may be necessary to facilitate the proceedings of such person or persons in the lawful execution of such trust, and, so far as the laws of the country permit, to protect the property of the deceased from any interference of the local authorities of the country where such citizen shall die; and to this end it shall be the duty of such consular officer to place his official seal upon all or any of the personal property or effects of the deceased, and to break and remove such seals as may be required by such person or persons, and not otherwise.

Consular officers to execute the laws of the United States relating to crimes of citizens of the United States on the high seas, &c.

SEC. 96. That it is and shall be the duty of consular officers of the United States to execute all laws of the United States which have been or may be hereafter passed for the punishment of crimes committed by citizens of the United States on the high seas, and where allowed at ports or within the limits of foreign countries, and for that purpose shall have all the powers conferred upon other officers to carry out to the fullest extent the objects of such laws.

For the safe custody and conveyance of prisoners to the United States.

SEC. 97. That whenever any complaint shall be made to any consular officer of the United States, of any such offense, or of any offense having been committed at sea by the master and crew, or any or either of them, belonging to any American ship, subject to any of the provisions of this act, or other acts or parts of acts, it shall be lawful for any such consular officer of the United States to inquire into the case, upon oath, and at his discretion to cause any offender to be placed under all necessary restraints, so far as it may be in his power, so that he may be sent and conveyed in safe custody to the United States as soon as practicable, in any vessel of the United States, or of any citizen thereof, to be there proceeded against according to law; and the costs and charges of imprisoning any such offender, and of conveying any of the witnesses to the United States, if not conveyed in the ship to which they respectively belong, shall be considered and deemed as part of the costs of the prosecution, or be paid as costs incurred on account of seafaring citizens of the United States left in distress in foreign parts; and all depositions taken before any consular officer of the United States abroad, and certified under his official seal and signature to be the depositions, and that they were taken in the presence of the party accused, shall be admitted in evidence in all courts having criminal jurisdiction and otherwise, in like manner as depositions taken before any justice of the peace within the United States now are or may be.

As to the conveyance of offenders and witnesses to the United States.

SEC. 98. That it shall be lawful for any consular officer of the United States to order a passage to the United States for any such offender or offenders under necessary restraint, and also for any witnesses; and the master or other person having charge of any ship belonging to any citizen of the United States, bound for the United States, shall, and he is hereby required to, receive and afford a passage and subsistence during the voyage to any such offender or offenders and witnesses, not exceeding the rate of one offender or two witnesses for every one hundred tons of his ship's burden; and shall receive for such offender or offenders and witness or witnesses, for passage, the same compensation as is or shall be allowed by this or any act for the conveyance to the United States of distressed seamen of the United States, to be paid as prescribed for that purpose; and, on his ship's arrival in the United States, the master of any vessel belonging to a citizen of the United States shall take, or cause to be taken, the offender or offenders before a justice of the peace, who shall deal with the matter as in cases of offenses committed upon the high seas; and in case the master or other person having the charge of any ship belonging to any citizen of the United States, when required by the consular officer of the United States to receive and afford a passage to any offender or witness, shall not receive and afford such passage or shall not take or cause to be taken the offender or offenders before a justice of the peace, as aforesaid, every such master shall be liable to a penalty of two hundred and fifty dollars.

Duties of consular officers in cases of stranded vessels.

SEC. 99. That consular officers in cases where ships of the United States shall be stranded on the coasts of their consulates respectively shall, as far as the laws of the country will permit, take proper measures for the purpose of saving the said ships, their cargoes and appurtenances, as for storing and securing the effects and merchandise saved, and for taking an inventory or inventories thereof; and the merchandise and effects saved, with the inventory or inventories thereof taken as aforesaid, shall, after deducting therefrom the expense, be delivered to the

owner or owners: *Provided*, That no consular officer shall have authority to take possession of any such goods, wares, merchandise, or other property when the master, owner, or consignee thereof is present or capable of taking possession of the same.

SEC. 100. That copies of all official papers and documents belonging to and filed or remaining in the office of any consular officer of the United States, and of all official entries in the books or records of any such office, shall, when certified under the hand and official seal of the proper consular officer, be admissible in evidence in all the courts of the United States.

Admission of certain documents, &c., under the consular seal in evidence.

SEC. 101. That the commanding officer of any vessel, squadron, or fleet of the Navy of the United States when upon the high seas, or in any foreign port where there is no resident consul of the United States, shall be, and is hereby, authorized and empowered to exercise all the powers of a consul of the United States in relation to seamen of the United States.

Naval officers of the United States in certain cases may exercise the power of consuls.

CHAPTER THE THIRD.

THE RECIPROCAL DUTIES OF CONSULAR OFFICERS OF THE UNITED STATES AND MASTERS OF AMERICAN SHIPS, AND FOR THE PROTECTION AND RELIEF OF DESTITUTE AMERICAN SEAMEN IN FOREIGN PORTS OR PLACES.

SEC. 102. That from and after the commencement of this act, all acts or parts of acts inconsistent with the provisions of this act for the protection and relief of destitute American seamen at foreign ports or places be, and the same are hereby, repealed, except so far as such acts repeal the acts thereby repealed: *Provided always*, That all offenses which shall have been committed, and all penalties and forfeitures which shall have been incurred, previously to the commencement of this act, shall be punishable and recoverable, respectively, under such acts as if the same had not been repealed: *Provided also*, that all acts and things made, done, or executed under or by virtue of and in accordance with the provisions of the said acts prior to the commencement of this act shall be good, valid, and effectual to all intents and purposes.

Repealing acts inconsistent with this act.

SEC. 103. That all duties relating to seamen imposed by the provisions of this act, and other acts or parts of acts, upon the Superintendent of the Consular Service and consular officers, shall be, and the same are hereby required to be, performed by the said officers in such manner and in such form as shall be or as is prescribed by such acts or parts of acts.

The Superintendent of the Consular Service and consular officers to carry out acts relating to seamen.

SEC. 104. That whenever a ship or vessel belonging to a citizen of the United States shall be sold in a foreign country, and her company discharged, or when a seaman, a citizen of the United States, shall, with his own consent, be discharged in a foreign country, it shall be the duty of the master to produce to the consular office of the United States the list of his ship's company, properly certified, and to pay to such consular officer for every seaman so discharged, being designated on such list as a citizen of the United States, the wages which may then be due to such seamen, the amount thereof to be paid by such consul to each seaman so discharged upon his engagement on board any vessel to return to the United States, or upon his shipment back to the United States, under the provisions of this act, after deducting from the said wages the amount expended for board and lodging and medical attendance, if required, but in no case including amount paid for passage home; and should the said wages not be sufficient to meet the said expenses, then the additional expense shall be paid out of the fund for the relief of destitute American seamen abroad, and each seaman aforesaid shall be relieved as hereinafter prescribed for the relief of destitute seamen; and it shall be the duty of all consular officers of the United States to render account of wages so required and expended and relief afforded, in such form and manner as may be prescribed by the Secretary of the Treasury.

Seamen's wages to be paid when an American ship is sold abroad

SEC. 105. That in lieu of the amounts known as "extra wages," heretofore required to be paid to each seaman, a citizen of the United States, over and above the wages due him by American vessels sold or transferred in a foreign port, or to each and every American seaman, in certain cases specified, discharged in or at a foreign port, the consular general or other consular officer of the United States within whose consulate or consular district any American vessel may enter, be, and

Relief dues to be paid in lieu of extra wages.

he is hereby, authorized and required to collect from the said vessel the amount of one-half of a cent per ton of registered tonnage, the said sums to be entered in a special account to be known as "the fund for the relief of destitute American seamen at foreign ports or places;" and any of the consular officers aforesaid may, and the same are hereby instructed and required to, retain possession of the papers of such vessels until such relief-dues shall have been paid in full, as herein provided; and it shall also be the duty of the said consular officers to examine the papers of the said vessels, and see that the said relief has been paid, and, in default of which, shall examine into the reasons therefor, and report the same, together with all other facts relating thereto, to the Secretary of the Treasury, and the said consular officers shall, and the same are hereby required to, give a receipt for the said relief-dues to the master or other chief officers of the vessel, in form prescribed by the Secretary of the Treasury, that the said dues were paid; and it shall further be the duty of the said consular officers, respectively, to account quarterly to the Secretary of the Treasury for all the sums so received, and to remit quarterly to the Secretary of the Treasury all amounts after deducting one hundred dollars received in excess of the disbursements made and allowed under the provisions of this act; and the said accounts and returns shall, and the same are hereby required to, be accompanied with proper vouchers, in accordance with forms and instructions to be furnished by the Secretary of the Treasury; and in all matters of neglect of duty or other improper conduct, the said consular officers shall be held subject to all the pains and penalties prescribed for the punishment of offenses in matters relating to consular fees, and the relief-dues herein required to be paid must be in the coin of the United States of America, or its equivalent.

Consular officers of the United States to extend relief to American seamen.

Distressed seamen found abroad may be relieved and sent home at the public expense.

SEC. 106. That out of the relief-dues collected as aforesaid, all consular officers of the United States in foreign countries, and in places where there are no such officers, any two resident American merchants, in such manner and under such rules as may be prescribed by the Secretary of the Treasury, may grant to all seamen, citizens of the United States, who have been shipwrecked, discharged, or left behind at any place abroad, whether from any ship employed in the merchant service or from any ships of the United States, or who have been engaged by any person acting either as principal or agent, to serve any ship belonging to any foreign power, or to the subject of any foreign state, and who are in distress in any place abroad, such relief in board, lodging, clothing, and medical attendance as their several necessities may require, until such time as they are able to provide them with a passage home, and for that purpose shall cause such seamen to be put on board some ship belonging to any citizen of the United States bound to any port of the United States, to which they belong, which is in want of men to take up its complement, and in default of any such ship shall provide them with a passage home as soon as possible, in some ship belonging to a citizen of the United States so bound as aforesaid, and shall indorse on the agreement of any ship on board of which any seaman is so taken or sent, the name of every person so sent on board thereof, with such particulars concerning the case as the Secretary of the Treasury requires; and the amount due in respect of such allowance shall be paid, out of any moneys applicable to the relief of distressed American seamen, on the production of the bills of disbursements, with the proper vouchers. It shall be the duty of the said consular officers or merchants to report quarterly, in connection with the account of each seaman so relieved or sent home, a full description, name, place of birth and residence, length of citizenship, vessel on which arrived, when and where shipped, nature of voyage, and so forth, of each seaman so relieved, together with any other facts by which the said seaman may be identified; and if the said information be unsatisfactory, the account for the relief of such seaman not credited shall be, and the same is hereby, required to be disallowed, and the amount expended shall be deducted from the unpaid balance of salary of the consular officer, or be collected by due process of law; and the said consular officers shall, and the same are hereby, required to send a quarterly statement of the arrangements at the port of their residence for the relief of destitute seamen, and all charges for board, lodging, clothing, and medical attendance; and the said statements, and all accounts for relief and receipts of relief-dues, shall be made under oath or affirmation.

SEC. 107. That consular officers of the United States, under such rules as may be prescribed by the Secretary of the Treasury, may grant passage to the United States, in accordance with the provisions of this act, to seamen, citizens of the United States, who may have arrived at their ports, respectively, on any vessel not American, and the same shall be accounted for, as required for other American seamen. Relief of American seamen arriving on other than American vessels.

SEC. 108. That the Secretary of the Treasury, if he deem it necessary or expedient for the protection of the fund for the relief of destitute American seamen, as aforesaid, shall require from all collectors or other chief officers of the customs within the United States, such information as may be required for the purposes in view, from the papers of any American ship entering any port in the United States; and for the further protection of said fund, a sum not to exceed two thousand five hundred dollars in any one year, to be used within the United States, may be expended out of the said fund, under authority from the Secretary of the Treasury for secret service under the direction of the superintendent of the consular service. The Secretary of the Treasury to require information from collectors of customs, and may appoint a secret agent.

SEC. 109. That when any seaman shall complain that the voyage is continued contrary to his agreement, or that he has fulfilled his contract, the consular officer of the United States, or other person authorized thereto, may examine into the same by an inspection of the articles of agreement; and if on the face of them he finds the complaint to be well founded, he shall discharge the seaman if he desires it, and require of the master the payment in full of all the lawful claims of such seaman; and in case the lawful claims of such seaman are not paid upon his discharge, the arrears shall from that time bear an interest of twenty-five per centum, and may be recovered under any law of the United States for the recovery of seamen's wages. Consular officers to see that agreements are complied with.

SEC. 110. That in case any ship belonging to any citizen of the United States be lost, sold, or transferred, an account containing a similar return as required in the several and respective cases before mentioned, made out up to the period of such loss, sale, or transfer, shall, if practicable, be delivered or transmitted by the master or owner at the time of the loss, sale, or transfer, to the collector of the port to which the ship belongs, with all convenient speed; and in case such loss, sale, or transfer shall take place out of the United States, within twelve calendar months at furthest after the loss, sale, or transfer of the ship. Return to be made in case of ship lost or sold abroad.

SEC. 111. That if any master of a ship belonging to any citizen of the United States shall discharge any person belonging to his ship or crew at any foreign port without the previous sanction in writing, to be indorsed on the agreement and crew-list by the consular officer of the United States there, or in his absence, then of two respectable merchants resident there, such master shall be guilty of a misdemeanor; or if any master of any such ship shall abandon or leave behind at any such place abroad, on shore or at sea, any person belonging to his ship or crew, on the plea or pretense of unfitness or inability to proceed on the voyage, or of desertion or disappearance from the ship, without a previous certificate in writing, to be indorsed on the agreement and crew-list, as aforesaid, by the consular officer of the United States there, or in the absence of any such officer, then of two respectable merchants, if there be any such at or within a reasonable distance from the place where the ship shall then be, such master shall be guilty of a misdemeanor; or if any master of any such ship, in case any person belonging to his ship or crew shall desert from the said ship at any place abroad, shall neglect to notify the same in writing to one of such officers as aforesaid, if there be any such resident at or near the place, or in their absence, then to two respectable merchants, as aforesaid, if there be such at or near the place, within twenty-four hours of such desertion, such master shall be guilty of a misdemeanor; and the said officers are hereby authorized and required, and the said merchants are authorized to examine into the grounds of such proposed discharge, or into the plea or pretense of such unfitness, inability, desertion, or disappearance as aforesaid, in a summary way, upon oath, which oath they are hereby respectively authorized to administer, and to grant or refuse such sanction or certificate according to the circumstances, and as it shall appear to them to be just. No seaman to be discharged abroad, nor to be abandoned or left behind, without the sanction of the consul.

SEC. 112. That if any master shall, contrary to the provisions of this act, discharge, abandon, or leave behind any seaman or other person belonging to the ship or crew, with or without his consent, it shall be incumbent on such master or other person, in any indictment or other proceeding against him, to produce the sanction or certificate hereby If any of the crew are left behind, the proof of sanction or authority to be upon the master.

required, or to prove that he had obtained the same previously to having discharged or left behind such seaman, or that it was impracticable for him to obtain such sanction or certificate.

On discharge of seamen abroad, by sale of ship or otherwise, certificates of discharge to be given and seamen to be sent home.

SEC. 113. That whenever any American ship is transferred or disposed of at any place out of the United States, and any seaman belonging thereto does not, in the presence of some consular officer of the United States, or if there is no such consular officer there, in the presence of one or more respectable American merchants residing at the place and not interested in the said ship, signify his consent in writing to complete the voyage if continued, and whenever the service of any seaman belonging to any American ship terminates at any place out of the United States, the master shall give to each such seaman a certificate of discharge in the form sanctioned by the Secretary of the Treasury as aforesaid, and in the case of any certificated mate whose certificate he has retained, shall return such certificate to him, and shall also, besides paying the wages to which such seaman is entitled, pay to the consular officer, or merchant or merchants aforesaid, for each seaman a sum equal to the amount allowed by the provisions of this act for the payment of the passages of seamen, citizens of the United States, to the United States, or in lieu thereof, the said master may provide passage for the seamen aforesaid to the United States; and if the master refuses or neglects to comply with the requirements of this section, any expenses incurred by the consular officer of the United States, or by any other person, on account of such seaman, shall be a charge upon the ship to which such seaman belonged and upon the owner for the time being thereof, and may be recovered against such owners with costs, at the suit of the consular officer or other person defraying such expenses, in the manner in which seamen are enabled to recover wages.

Forcing seamen on shore, &c., a misdemeanor.

SEC. 114. That if the master of any ship belonging to any citizen of the United States, or the mate or other officer of such ship, shall wrongfully force on shore and leave behind, or shall otherwise willfully and wrongfully leave behind, on shore or at sea, in or out of the United States, any person belonging to his ship or crew, before the completion of the voyage for which such person was engaged, or the return of the ship to the United States, such master, mate, or other officer shall be guilty of a misdemeanor; and every misdemeanor mentioned or created by this act shall and may be prosecuted by indictment or other legal proceeding in any court having criminal jurisdiction within the United States; and the offense may be laid and charged in the said indictment or other legal proceeding to have been committed in the place where the offender shall happen to be, who, being convicted thereof, shall be liable to fine or imprisonment, or both, as to the court before whom he is tried shall seem meet; and every court is hereby authorized to issue the necessary legal papers for the examination of any witness or witnesses who may be absent or out of the jurisdiction of the court; and at the trial the depositions so taken, if such witness or witnesses shall be then absent, shall be received in evidence.

Seamen when allowed to be left behind to be paid their wages.

SEC. 115. That every master of an American ship who shall leave any seaman or other person, as aforesaid, on shore at any such port abroad, under a certificate of his not being in a condition to proceed on the voyage, shall deliver to the consular officer of the United States, as the case may be, or if there be none such, to any one or more respectable merchants there, or if there be but one, then to such one merchant, a just and true account of the wages due to such seaman, such account, when delivered to a consular officer, to be in duplicate, and shall pay the same either in money or by a bill drawn upon the owner; and if by bill, then such consular officers or merchants, as aforesaid, are respectively authorized and required, by indorsement on such bill, to certify that the same is drawn for money due on account of seamen's wages, or to that effect, with such further particulars as the Secretary of the Treasury requires; and any master who shall refuse or neglect to deliver a just and true account of such wages, or to pay the amount thereof in money or by bill, as aforesaid, shall, for every such offense or default, forfeit and pay, in addition to the payment of the wages, the sum of fifty dollars; and every master who shall deliver a false account of such wages shall, for every such offense, in addition to the payment of the wages, forfeit and pay the sum of one hundred dollars.

Such wages to be treated as money due to the seamen.

SEC. 116. That every such payment as last aforesaid, whether by bill or money, shall, if made out of the United States, be made to the consular officer of the United States, who shall, if satisfied with the account, indorse on one of the duplicates thereof a receipt for the amount paid

or bill delivered, and shall return the same to the master; and the master shall, within forty-eight hours after his return to his port of destination in the United States, deliver the same to the chief officer of the customs there; and the consular officer shall retain the other duplicate of the said account, and shall, if the seaman subsequently obtains employment at or otherwise quits the port, deduct out of the sum received by him, as aforesaid, any expenses which have been incurred by him in respect of the subsistence of the seaman under the provisions herein contained, and shall pay the remainder to the seaman, and shall also deliver to him an account of the sums so received and expended on his behalf.

SEC. 117. That upon the application of any seaman of the United States for a discharge, if it shall appear to the consular officer of the United States that he is entitled to his discharge under the provisions of this or any other act or acts, or according to the general principles or usages of maritime laws as recognized in the United States, he shall discharge such seaman, and shall require from the master of the ship from which such discharge shall be made the payment of all wages due; and it shall be the duty of such master to pay the same, and no such payment, or any part thereof, shall be remitted in any case except such as are provided for by law, and the wages so required to be paid in coin or its equivalent, any contract or agreement to the contrary notwithstanding; and if any consular officer, when discharging any seaman, shall neglect to require the payment of and collect the wages required to be paid in the case of the discharge of any seaman, he shall be accountable to the United States for the full amount of such wages, to be refunded to such seaman to the full amount; and if any seaman shall, after his discharge, have incurred any expense for board or other necessities, and is unable to pay the same at the port or place of his discharge, before shipping again, such expense shall be paid out of the fund for the relief of destitute American seamen; and to protect the said seamen from imposition, the said consular officers are hereby authorized to retain two-thirds of the wages paid to seamen as aforesaid, and to pay the balance, if any, in full, after complying with the provisions of this act, to the said seamen, respectively, as belongs to them, upon their reshipment on another vessel or shipment to the United States; and moneys so received and expended shall be accounted for in form, to be prescribed by the Secretary of the Treasury, as seamen's wages paid, retained, and refunded.

Discharge of
seamen.

SEC. 118. That it shall be the duty of the consular officers of the United States, from time to time, to provide for the seamen of the United States who may be found destitute within their districts respectively, sufficient subsistence and passages to some port in the United States in the most reasonable manner, at the expense of the United States, subject to such instructions as the Secretary of the Treasury shall give; and that all masters of ships belonging to citizens of the United States, and bound to some port of the same, are hereby required and enjoined to take such seamen on board of their ships at the request of the said consular officers respectively, and to transport them to the port in the United States to which such ships may be bound, on such terms, not exceeding ten dollars for each person, as may be agreed upon between the said master and consular officer. And the said seamen shall, if able, be bound to do duty on board such ships according to their several abilities: *Provided*, That no master of any ship shall be obliged to take a greater number than two men to every one hundred tons burden of the said ship on any one voyage; and if any such master shall refuse the same on the request or order of the consular officer, such master shall forfeit and pay the sum of one hundred dollars for each seaman so refused, to be recovered for the benefit of the United States in any court of competent jurisdiction; and the certificate of any such consular officer, given under his hand and official seal, shall be prima facie evidence of such refusal in any court of law having jurisdiction for the recovery of the penalty aforesaid.

Destitute sea-
men to be sent
home.

SEC. 119. That in all cases where distressed seamen of the United States have been transported from foreign ports where there was no consular officer of the United States, to ports of the United States, and in all cases where they shall hereafter be so transported, there shall be allowed to the master or owner of each vessel in which they shall or may have been transported such reasonable compensation, in addition to the allowance now fixed by law, as shall be deemed equitable by the Secretary of the Treasury.

Reasonable
compensation to
be paid where no
consular officer.

Power for the Government to sue for the amount advanced for the relief of seamen left abroad.

SEC. 120. That if any person shall be discharged, or willfully and wrongfully left behind or abandoned, at any port in or out of the jurisdiction of the United States, by any master, mate, or other officer, contrary to the provisions of this act, and shall become distressed, and be relieved under the provisions of this act or any act hereafter passed for the relief of destitute American seamen, or if any person shall, as principal or agent, engage any citizen of the United States to serve in any vessel belonging to any foreign power, or to the subject of any foreign state, and such last-mentioned person shall become distressed and be relieved as aforesaid, then, in addition to the wages due from such master or owner or person making such engagement, and the penalties to which such master may be liable, the Secretary of the Treasury shall, in the name of the United States, be entitled to sue such master, or the owner of the ship, or any person who shall have made such engagement as aforesaid, at the discretion of the Secretary of the Treasury, for all the charges and expenses which shall have been incurred in or for the subsistence, necessary clothing, and conveyance home, or burial, should he die abroad or before reaching home, of any such seaman or person relieved as aforesaid, as money paid to the use of such master or owner or other person, who shall have made such engagement as aforesaid, and recover the same, together with full costs of the suit, in the same manner as other debts due to the United States are recoverable; and in any proceeding for that purpose proof of the account furnished by any such consular officer of the United States, or by such two merchants, or one merchant, according to the case, shall, together with the proof of payment by the said legal officer of the United States, of the charges incurred on account of any such person, be sufficient evidence that such person was relieved and conveyed home or buried at the expense of the United States; and the court in which any proceeding for the recovery of the said money shall be instituted is hereby authorized to issue the necessary legal documents for the examination of witnesses, and the depositions taken under such legal documents shall be used as evidence.

Masters to seek services of consular officers.

SEC. 121. That it shall be the duty of every master of a ship of the United States, whenever he shall have occasion for any consular or other official service which any consular officer of the United States shall be authorized by law or usage officially to perform, and for which any fees shall be allowed by the rates or tariffs of fees as aforesaid, to apply to such one of the said officers as may then be officially located at the consulate, if any there be, where such service shall be required, to perform such service, and such master shall pay to such officer such fees as shall be allowed for such service in pursuance of the provisions of this act; and if any such master shall omit so to do, he shall be liable to the United States for the amount of the fees lawfully chargeable for such services, as though the said services had been performed by such officers; and all consular officers are hereby authorized and required to retain in their possession all the papers of such ships, which shall be deposited with them as directed by this or any other act, till payment shall be made of all demands and wages on account of such ships.

Duty of a master upon arriving in port to deposit papers with consular officer.

SEC. 122. That it shall also be the duty of every master of a ship belonging to citizens of the United States, who shall sail from any port of the United States at any time after thirty days after the commencement of this act, on his arrival at a foreign port, to deposit his register, sea-letter, and other ship's documents with the consular officer of the United States, if any there be at such port; that in case of refusal or neglect of the said master to deposit the said papers as aforesaid, he shall forfeit and pay five hundred dollars, to be recovered by the said consular officer in his own name, for the benefit of the United States, in any court of competent jurisdiction; and it shall be the duty of such consular officer, on such master producing to him a clearance from the proper officer of the port where his ship may be, to deliver to the said master all of his said papers: *Provided*, That such master shall have complied with the provisions contained in this act.

Ship's agreement on arrival at a foreign port to be deposited with the consul, and at a home port with the collector of customs.

SEC. 123. That if any ship belonging to a citizen of the United States, except steamers and packets in the course of their voyage, shall arrive at any foreign port where there shall be a consular officer of the United States, and remain thereat for forty-eight hours, the master shall, within forty-eight hours of the ship's arrival, deliver, or cause to be delivered, to such consular officer at such foreign port, the agreement or agreements before mentioned, the whole to be kept by such consular officer during the ship's stay in such port, and to be returned to the master a

reasonable time before his departure, with a certificate indorsed on such agreements, respectively, stating when the same were respectively delivered and returned; and in case it shall appear that the required forms or existing laws have been in any respect neglected or transgressed, such consular officer shall make an indorsement to that effect on such agreement, and forthwith transmit a copy of such indorsement to the Secretary of the Treasury, with the fullest information he can collect regarding such neglect or transgression; and if any master shall neglect to deliver any agreement or such account as aforesaid, he shall, for every such neglect or default, forfeit and pay the sum of one hundred dollars; or if any master shall deliver any false or incorrect account, he shall, for every such offense, forfeit and pay the sum of one hundred and fifty dollars.

SEC. 124. That every master of an American vessel who engages any seamen at any place out of the United States, in which there is a consular officer of the United States, shall, before carrying such seamen to sea, procure the sanction of such officer, and shall engage such seamen before such officer; and the same rules as are provided with respect to the engagement of seamen in the United States shall apply to such engagements made before consular officers; and upon every such engagement the consular officer shall indorse upon the agreement his sanction thereof, and an attestation to the effect that the same has been signed in his presence and otherwise made as hereby required; and every master who engages any seaman in any place where there is a consular officer, otherwise than as hereinbefore required, shall incur a penalty not exceeding one hundred dollars; and if in any case the indorsement and attestation hereby required are not made upon the agreement, the burden of proving the engagement to have been made as hereinbefore required shall be upon the master.

Seamen engaged in foreign ports to be shipped with the sanction and in the presence of the consul.

SEC. 125. That whenever any master shall ship a seaman in a foreign port, he shall forthwith take the list of his crew and the duplicate of the shipping-articles to the consul or person who discharges the duties of the office at that port, who shall make the proper entries thereon, setting forth the contract, and describing the person of the seaman, and thereupon the bond originally given for the return of the men shall embrace each person so shipped.

Proceedings in the shipment of a seaman.

SEC. 126. That for the better carrying into effect the purposes of this act it shall be lawful for consular officers of the United States in foreign ports to demand from the master of every ship belonging to a citizen of the United States the production of the log-book, muster-roll of the ship, and such agreements as aforesaid, and a list of passengers and persons on board, and to muster the crew of such ship, and to summon the master to appear before them and give any explanation they may respectively require regarding the said crew, ship, or documents, for the purpose of ascertaining whether the provisions of this act and every other act by which the crews of such ships as aforesaid are regulated, and the laws relating to commerce and navigation, have been kept and complied with, and to take copies of all or any of such documents; and if any such master, on such demand being made, shall refuse to produce such log-book, muster-roll, agreements and list of passengers and persons, or refuse to allow copies to be taken, or shall refuse to permit his crew to be so mustered, or shall refuse to appear and give such explanation as aforesaid, or shall willfully deceive or mislead the person before whom he shall so appear, he shall, for every such neglect, refusal, or offense, forfeit and pay the sum of one hundred dollars.

Consul empowered to require production of the agreement, muster-roll, &c.

SEC. 127. That if any seaman, while on board any ship, states to the master that he desires to make complaint to a consular officer of the United States, against the master or any of the crew, the master shall, if the ship is then at a place where there is any such officer as aforesaid, so soon as the service of the ship will permit, and if the ship is not then at such a place, so soon after her first arrival at such a place as the service of the ship will permit, allow such seaman to go ashore, or send him ashore in proper custody, so that he may be enabled to make such complaint, and shall in default incur a penalty not exceeding fifty dollars.

Seamen to be allowed to go ashore to make complaint to a consular officer.

SEC. 128. That if the officer to whom any such complaint as last aforesaid is made certifies in such statement as aforesaid that there was no reasonable ground for such complaint, each of the parties so complaining shall be liable to forfeit to the owner, out of his wages, a sum not exceeding one week's wages.

Forfeiture for frivolous complaint.

Masters and seamen can make complaints to consuls; and appointment of inspectors.

SEC. 129. That if the first officer, or any officer, and a majority of the crew of any vessel, shall make complaint, in writing, that she is in an unsuitable condition to go to sea, because she is leaky, or insufficiently supplied with sails, rigging, anchors, or any other equipment, or that the crew is insufficient to man her, or that her provisions, stores, and supplies are not, or have not been during the voyage, sufficient and wholesome; thereupon, in any of these or like cases, the consular officer of the United States, or any one who may discharge any duties of such consular officer, shall appoint two disinterested, competent, practical men, acquainted with maritime affairs, to examine into the causes of complaint, who shall, in their report, state what defects and deficiencies, if any, they find to be well founded, as well as what, in their judgment, ought to be done to put the vessel in order for the continuance of her voyage; and the inspectors so appointed shall have full power to examine the vessel and whatever is aboard of her, so far as is pertinent to their inquiry, and also to hear and receive any other proofs which the ends of justice may require; and if, upon a view of the whole proceedings, the consular officer shall be satisfied therewith, he may approve the whole or any part of the report, and shall certify such approval, and if he dissents, shall also certify his reasons for dissenting. The inspectors in their reports shall also state whether, in their opinion, the vessel was sent to sea unsuitably provided in any important or essential particular, by neglect or design, or through mistake or accident; and in case it was by neglect or design, and the consular officer approves of such finding, he shall discharge such of the crew as require it, each of whom shall be entitled, in addition to his wages to the time of discharge, the amount of his passage-money to the United States, as hereinbefore provided, to be retained by the consular officer for that purpose; but if, in the opinion of the inspectors, the defects or deficiencies found to exist have been the result of mistake or accident, and could not, in the exercise of ordinary care, have been known and provided against before the sailing of the vessel, and the master shall, in a reasonable time, remove or remedy the causes of complaint, then the crew shall remain and discharge their duty; otherwise they shall, upon their request, be discharged, and receive their pay up to the time of discharge; and the master shall pay all such reasonable charges in the premises as shall be officially certified to him under the hand of the consular officer; but in case the inspectors report that the complaint is without any good and sufficient cause, the master may retain from the wages of the complainants, in proportion to the pay of each, the amount of such charges, with such reasonable damages for detention on that account as the consular officer directing the inquiry may officially certify.

Consular officers shall enforce laws relating to discipline on American ships.

SEC. 130. That it shall be the duty of any consular officer or shipping-master of the United States to enforce, when the same comes within his jurisdiction, all laws already passed, or which may be passed, relating to the discipline to be observed by masters and seamen on American ships; and all acts of disobedience, insubordination, desertion, or violation of the laws of the United States relating to revenue, are to be investigated and punished as is or may be prescribed by acts respecting such offenses, and notice of the same shall be recorded on the official log-book, and a report of all the circumstances, proceedings, and penalties be made to the Secretary of the Treasury; and in all acts of misconduct for which the agreement imposes a fine, such fine shall be deducted and paid over as follows, that is to say: if the offender is discharged in the United States, the master or owner shall deduct such fine from the wages of the offender, and pay the same over to the chief officer of the customs, to be remitted to the Secretary of the Treasury; and if abroad, the fine, in the presence of the consular officer of the United States, shall be deducted as aforesaid, and an entry of such deduction shall then be made in the official log-book, if any, and signed by such officer, or other person, and on the return of the ship to the United States the master or owner shall pay over such fine, in the case of foreign-going ships, to the officer before whom the crew is discharged; and if any master or owner neglects or refuses to pay over such fine in manner aforesaid, he shall, for each offense, incur a penalty not exceeding six times the amount of the fine retained by him: *Provided*, That no act of misconduct for which any such fine as aforesaid has been inflicted and paid shall be otherwise punished under the provisions of this act.

Consular officers to reclaim deserters.

SEC. 131. That it shall be the duty of consular officers of the United States to reclaim deserters and discountenance insubordination by every means within their power, and where the local authorities can be use-

fully employed for that purpose, to lend their aid and use their exertions to that end in the most effectual manner.

SEC. 132. That in all cases where deserters are apprehended, the consular officer of the United States shall inquire into the facts; and if satisfied that the desertion was caused by unusual or cruel treatment, the seaman shall be discharged, and receive his wages to the time of the discharge, and the officer discharging him shall enter upon the crew-list and shipping-articles the cause of discharge, and the particulars in which the cruelty or unusual treatment consisted, and subscribe his name thereto officially, and the said consular officer shall grant the said seaman or seamen relief in board, lodging, and medical attendance, and if not reshipped on another vessel at the earliest practicable moment, secure passage for and send him or them to the United States, and all expenses incurred on account of the maintenance and passage home of the said seaman or seamen, shall be paid by the consular officer and be charged to the vessel and its owners, and a full account of the same shall be sent forthwith to the Secretary of the Treasury, to be proceeded with as provided for in that portion of this act giving the Secretary of the Treasury power to sue for the amount advanced for the relief of seamen, citizens of the United States, left abroad.

Consular officers to inquire into the cause of desertion.

SEC. 133. That whenever any seaman of any American ship shall desert such ship, the master of such vessel shall note the fact and date of such desertion on the list of the crew, and the same shall be officially authenticated at the consulate of the United States at the port first visited by such vessel after such desertion, if such desertion shall have occurred in a foreign country, or if in such case such vessel shall not visit any place where there be any consulate before her return to the United States, or the desertion shall have occurred in the United States, the fact and time of such desertion shall be officially authenticated before a notary public immediately at the first port where such vessel shall arrive after such desertion; and all wages that may be due to such seaman, and whatever interest he may have in the cargo of such vessel, shall be forfeited to and become the property of the United States, and paid over for their use to the collector of the port where the crew of such vessel are accounted for, as soon as the same can be ascertained, first deducting therefrom any expense which may necessarily have been incurred on account of such vessel in consequence of such desertion; and in settling the account of such wages or interest, no allowance or deduction shall be made except for moneys actually paid, or goods at a fair price supplied, or expenses incurred to or for such seaman, any receipt or voucher from or arrangement with such seaman to the contrary notwithstanding.

Desertions.

SEC. 134. That if any consular officer of the United States shall neglect or omit to perform seasonably the duties hereby imposed upon him respecting American ships, masters, and seamen, or shall be guilty of any malversation or abuse of power, he shall be liable to the injured person for all damages occasioned thereby; and for all malversation and corrupt conduct in office he shall be liable to indictment, and, on conviction by any court of competent jurisdiction, shall be fined not less than one nor more than ten thousand dollars, and be imprisoned not less than one nor more than five years.

Penalty for neglect of duty.

CHAPTER THE FOURTH.

RESPECTING THE VERIFICATION AND AUTHENTICATION OF INVOICES AND THE DUTIES OF CONSULAR OFFICERS OF THE UNITED STATES THEREIN.

SEC. 135. That all acts or parts of acts relating to the verification of invoices and the duties of consular officers of the United States, or other duly-authorized persons therein, inconsistent with the provisions of this act, are hereby repealed, in so much thereof as relates to the acts, deeds, or things herein specially mentioned.

Repeal of acts inconsistent with this portion of this act.

SEC. 136. That in the construction and for the purposes of this act, or other acts or parts of acts relating to invoices of goods imported into the United States, the following terms shall have the respective meanings hereinafter assigned to them, that is to say:

Definition of terms used in this portion of this act.

"Place of shipment" shall mean the place where the goods, wares, or merchandise are manufactured, or where they finally enter the market for sale, as hereinafter prescribed, and begin their journey to the United

States, whether it be at an inland city or other place, or on the seaboard and within the intents and purposes of this act.

"Invoice" shall mean a statement made in accordance with the provisions of this act, and duly declared, verified, and authenticated before a consular officer of the United States, or other person authorized thereto, giving the quantity and value of any goods, wares, or merchandise destined for the United States, and subject to duties of any kind whatever under the laws thereof.

"Verification of an invoice" shall mean the declaration of the manufacturer, or other duly authorized person, as to the quantity, value, and any other matter or information contained in the invoice under the provisions of this act, before a consular officer of the United States, or other person hereinafter authorized to receive the same.

"Authentication of an invoice" shall mean the certificate of the consular officer of the United States, or other herein duly-authorized person, under the consular seal of the United States, if by a consular officer of the United States, done and executed in such manner as prescribed by this act or instructions thereto from the Secretary of the Treasury.

"Consular district" shall mean all such towns, places, or country, under the jurisdiction of one and the same full and principal consular officer of the United States.

And all other terms used in this portion of this act shall have the meaning hereinbefore or hereinafter given them by this act.

Persons declaring to the invoice must be the persons named therein.

SEC. 137. That no consular officer shall certify any invoice, unless he shall be satisfied that the person making the declaration thereto is the person he represents himself to be, that he is a creditable person, and that the statements made are true; and he shall, thereupon, by his certificate, state that he was so satisfied.

Verification to be by declaration only, before a consular officer.

SEC. 138. That for all purposes of the verification of invoices of goods, wares, or merchandise imported into the United States and subject to duty, declaration only, duly signed and authenticated, as hereinafter prescribed, shall be made and executed before a consular officer of the United States, resident at the place of manufacture or other place hereinafter specified, of the said goods, wares, or merchandise, or if there be no such consular officer of the United States resident there, then by a consular officer of a country in amity with the United States who may reside there, or if there be no such consular officer, then by two respectable merchants resident there; and all such declarations must be made as aforesaid before shipment of the said goods, wares, or merchandise, and in the manner hereinafter prescribed; and all shipments before the declaration shall have been made are hereby declared illegal and void; and all consular officers and others herein authorized to verify invoices are required to notify collectors at the ports of destination in the United States of the said goods, wares, or merchandise of the facts, with a view to the seizure of the said goods, wares, or merchandise, for an attempt to defraud the revenue.

Verification to be by declaration and not by oath; and penalty for violation.

SEC. 139. That in all cases, without exception, the verification of invoices aforesaid shall be by declaration of the persons hereinafter mentioned in the manner and form prescribed by this act, and the oath or affirmation, or any oath or affirmation heretofore required, taken or admitted to declaration, whether by the consular officer of the United States or administered or done by or before a duly-authorized magistrate, or other person of the country, shall be, and the same is or are hereby, abolished and required no longer to be taken, and the said declaration, in form to be prescribed by the Secretary of the Treasury, shall be made only before a consular officer of the United States, or other person as herein specially authorized; and the said declaration, duly authenticated by the said consular officer, or other duly-authorized person, and under the consular seal of such consular officer, shall be, and the same is hereby, declared to be, to all intents and purposes, for the benefits of this act, binding and of the same force and effect as an oath or affirmation in the verification of an invoice, and at any time should there appear to the consular officer of the United States, or other duly-authorized person, any doubts as to the correctness of the statements contained in the invoice, the said consular officer or other persons as aforesaid shall, after full investigation, make note thereof on the invoice stating his or their disagreement, and his or their own judgment of the facts so disputed, and all other information which the consular officer or other persons aforesaid may deem necessary for the customs officers of the United States to know; but in no case shall any invoice so disputed be

entirely withheld by the consular officer or other persons as aforesaid from verification, but they may retain the same for any reasonable time, for further inquiry and consideration; and any consular officer of the United States, who may require or permit an oath or affirmation contrary to the provisions of this act, shall be guilty of a misdemeanor, and upon information and satisfactory proof thereof from any person the said consular officer shall, for each offense, be fined twenty-five dollars, the amount to be deducted from his salary, half of which shall go to the informer and the remaining half to the fund for the payment of the expenses of consular courts of inquiry; and all charges of commissioners or other persons for oaths or any other service, and not embraced in the legal fee prescribed under the provisions of this act for the verification and authentication of invoices, are hereby forbidden, and upon the discovery of such illegal fees being required, permitted, or taken, under any circumstances whatever, with or without the said consular officer's consent, the said officer shall be deemed guilty of a misdemeanor, and be subject to a fine of not more than twelve nor less than one month's salary, and dismissal from the consular service of the United States, and be forever after disqualified for a similar office.

SEC. 140. That no verification of invoices of goods, wares, or merchandise imported into the United States shall be valid unless the declaration shall have been made by one at least of the following persons, that is to say: First, by the manufacturer; secondly, by the real owner; thirdly, by the seller; fourthly, by the purchaser. And in case it be found impracticable to secure the declaration of any one of the above-named persons, for reasons stated in writing and satisfactory to the consular officer of the United States or other duly-authorized person, then the agent of any of the persons aforesaid, may declare to the same, having previously filed in the consulate of the United States a duly executed power of attorney from one of the persons aforesaid, authorizing him to act for and binding his principal, and a certified copy of the said power of attorney, for which a consular fee shall be charged and accounted for as such, shall be attached to each invoice, and be forwarded therewith, and under no circumstances shall the shipper, either personally or through his agent or representative, be allowed to make declaration, except he come under the head of one of the above-named persons authorized to do the same.

By whom invoices shall be verified.

SEC. 141. That no declaration to invoice of goods, wares, or merchandise imported into the United States shall be valid unless made before a consular officer of the United States, or other person authorized thereto, at one of the following places, that is to say: First, at the place or in the consular district of manufacturer; secondly, at the place or in the consular district of general store, if the market be actually supplied or the actual sale be made therefrom; thirdly, in countries lying adjacent to and bordering on the United States, at the place or in the consular district nearest to the port or place of clearance for the United States.

Where declarations to invoice shall be made.

SEC. 142. That, in addition to the foregoing provisions for the verification of invoices, the following rules, applicable to special cases, shall also be observed, that is to say:

Explanatory of how, when, and where invoices shall be verified in certain cases.

First, goods, wares, or merchandise, manufactured or bought in one consular district, and ordered by an agent or other person residing in another, shall be invoiced in the district of manufacture.

Secondly, goods, wares, or merchandise manufactured in one consular district, and shipped to another for sale, the said goods shall be invoiced in the consular district where sold, by any one of the persons hereinbefore authorized, but in no case shall this be construed to mean that goods, wares, or merchandise, manufactured in one district and bought by an agent residing in another, shall be invoiced in the district in which the said agent resides, unless the said goods, wares, or merchandise shall have actually been at the place of invoice in the said district and bought there within the terms of this act.

Thirdly, no single invoice shall cover or include goods, wares, or merchandise other than such as were manufactured or bought at the same place, or in the same consular district; and all invoices embracing goods, wares, or merchandise, as aforesaid, manufactured or purchased elsewhere, shall be illegal and void.

Fourthly, no invoice shall embrace goods, wares, or merchandise shipped by two or more vessels.

SEC. 143. That all invoices required by the provisions of this act shall be made out generally in accordance with the following rules, that is to say:

General rules to be observed in all invoices.

First, all invoices shall be in triplicate, and the three copies so required shall be regarded as one invoice, for which a single charge shall be made, as prescribed by the schedule of consular fees for certificate to invoice, including declaration, now, or which may at any future time be, in force under the provisions of this act; and the consular officer aforesaid shall return one of the said triplicates to the person producing them, shall file one for reference and preservation in his office, and shall transmit the remaining one to the collector or the chief officer of the customs at the port of destination, in the United States, of the merchandise, by the master of the vessel in which shipment is made, or by mail; and upon the last-named copy the consular officer aforesaid shall stamp or write upon his consular certificate the amount of the invoice, its consular number, the name of the consulate, the amount and number of the fee received for authentication, and sign in person his own name thereto, and in all other respects, in addition to the above, shall carry out any instructions from the Secretary of the Treasury requiring other information; and for the preservation of the copy retained in the consulate, the said copy shall be folded and indorsed with its number, date, name of the signer of the declaration, shipper, and name of the vessel in which the goods, wares, or merchandise were shipped, and date of sailing of the vessel, if at a sea-port; if not, then the date of starting of the goods on their journey to the United States.

Secondly, the declaration to each and every invoice of the triplicate, when produced to the consular officer of the United States or other person authorized to receive the same, must be signed by one of the persons before mentioned, and must contain the following matter and information:

- (a) That it is in all respects true.
- (b) That no different invoice of the articles therein mentioned has been or will be furnished to any one.
- (c) That it sets forth the actual quantity, respectively, of all articles therein named which are subject to specific duty.
- (d) That upon all articles therein named which are subject, either wholly or in part, to an ad valorem duty, and obtained by purchase, it contains a full and true statement of the time and place of purchase, their actual cost, and all charges upon them in the currency paid therefor, and, when otherwise obtained, the actual market-value thereof, respectively, paid at the time and place at which they were obtained or manufactured.
- (e) That no discounts, bounties, or drawbacks are contained in the said invoice, save such as are actually allowed.

Thirdly, the authentication of an invoice must be by certificate of the consular officer as aforesaid to each one of the said triplicates, under the consular seal, and shall be otherwise marked as may be required by the Secretary of the Treasury, to secure the integrity of the said triplicates, and the said certificate shall contain the following information:

- (a) That the invoice has been produced by the person declaring to the same to the officer certifying the same.
- (b) The date of such production of the invoice.
- (c) The name and identity of the person producing the invoice and signing the declaration.

(d) The intended port of destination of the merchandise in the United States, as declared by such person; and any additional information as may be required by the Secretary of the Treasury in the declaration and authentication of invoices, and shall be so furnished; and the said Secretary shall provide the forms to be used in all matters relating to invoices under the provisions of this act.

Declarations to give the market-value at the time, and no discounts for cash, &c., to be allowed.

SEC. 144. That all declarations to invoices must state and be of the full and actual market-value of the goods, wares, or merchandise at the time and place of making the same, and no discount for cash or decrease or change in the price paid, owing to a fall or rise in the market, shall be allowed.

The currency in which invoices shall be made.

SEC. 145. That all invoices of goods, wares, or merchandise paying a specific duty shall be made out in the currency actually paid therefor, without reference to the currency of the country; or, if paying an ad valorem duty on the market-value, as prescribed in the last before-mentioned section, in the currency and at the place and time of invoice; and where the value of a foreign currency is not fixed by the laws of the United States, or fluctuates, or has been subsequently debased, a consular certificate, in form to be prescribed by the Secretary of the Treas-

ury, shall also be sent, showing the value of the said currency at the time and place of invoice in American silver dollars:

SEC. 146. That it shall be the duty of consular officers of the United States, where practicable, to receive and accept for the use of their consulates, respectively, samples of all goods, wares, and merchandise manufactured at their consulates or in their consular districts, and from these establish certain standards with numbers, or any other designating mark, of a kind which shall be taken to indicate all goods of the said standard of quality; and in the invoices, in lieu of samples, with each of the said invoices the designation of the number or mark aforesaid, corresponding with the standard in the consulate, may answer the purposes in view; and it shall be the duty of each and every consular officer of the United States, requiring samples as aforesaid, to report to the Secretary of the Treasury the course pursued by him with reference to samples. Respecting samples.

SEC. 147. That it shall be the duty of all consular officers of the United States to acquaint themselves with the market-values of all the products and manufactures of their consular districts, and with the currencies, weights, and measures in use in the countries and districts in which they reside, and inform themselves respecting all other matters to the advantage and accuracy of invoices; and the Secretary of the Treasury, at such times as he may see fit, shall test the ability of consular officers in these particulars by requiring of them special reports on the subjects herein referred to; and any consular officer of the United States failing to give satisfactory evidence of his efficiency in this respect shall be removed from office forthwith. Consular officers to keep themselves informed respecting currencies, &c.

CHAPTER THE FIFTH.

IN RELATION TO THE EXERCISE OF JUDICIAL FUNCTIONS BY CONSULAR OFFICERS OF THE UNITED STATES OF AMERICA WITHIN CERTAIN COUNTRIES.

SEC. 148. That it is and shall be lawful for the Government of the United States to hold, exercise, and enjoy any power or jurisdiction which it now has, or may at any time hereafter acquire, by treaty or other lawful means, within any country or place outside of the United States. The power acquired by the United States for its consular officers to exercise judicial powers.

SEC. 149. That every act, matter, and thing which may at any time be done in pursuance of any such power or jurisdiction of the Government of the United States, in any foreign country or place, shall in all courts, and elsewhere under the jurisdiction of the United States, be, and be deemed and adjudged to be, in all cases and to all intents and purposes whatsoever, as valid and effectual as though the same had been done according to the local law then in force within such country or place. Acts done in pursuance of such power to be of the same effect as if done under local laws.

SEC. 150. That in the construction and for the purposes of this portion of this act, if not inconsistent with the context or subject-matter, the following terms shall have the respective meanings hereinafter assigned to them: Definition of terms.

"Minister" shall be understood to mean the person invested with and exercising the principal diplomatic functions in each of the countries mentioned in this portion of this act.

"Consul," in the sense of this portion of this act, shall be understood to mean any person invested by the United States with, and exercising the functions of, consul-general, vice-consul-general, consul or vice-consul in any of the countries herein named.

SEC. 151. That if at any time there be no minister of the United States in either of the countries hereinafter mentioned, the judicial duties which are imposed by this act upon the minister shall devolve upon the consul-general or consul of the United States of the highest class, who is hereby authorized and required to discharge the same. The consul-general to have the powers in certain cases conferred by this act upon ministers.

SEC. 152. That to carry into full effect the provisions of the treaties of the United States with the empires of China and Japan, and Siam, Persia, and Madagascar, respectively, consuls of the United States, duly appointed to reside in each of the said countries, shall, in addition to other powers and duties imposed upon them, respectively, by the provisions of such treaties respectively, be invested with the judicial authority herein described, which shall appertain to the said consuls, and be a part of the duties belonging thereto, wherein the same is allowed by treaty. Consular officers to exercise judicial powers.

No jurisdiction to be exercised beyond the power of the act.

SEC. 153. That no jurisdiction shall be exercised by any consul-general, vice-consul-general, consul, or vice-consul over citizens of the United States beyond the provisions of this act or of acts of Congress hereafter made, and any insufficiency in such acts to meet all requirements of cases arising under the judicial functions of consular officers of the United States in certain countries shall first be reported for the consideration of the Secretary of State.

Powers of consular officers in the premises.

SEC. 154. That in regard to crimes and misdemeanors, the said consuls-general and consuls are hereby fully empowered to arraign and try, in the manner hereinafter provided, all citizens of the United States charged with offenses against law, which shall be committed in such countries respectively, and, upon conviction, to sentence such offenders in the manner herein authorized; and the said consuls-general and consuls, and each of them, are hereby authorized to issue all such processes as are suitable and necessary to carry this authority into execution.

May issue processes.

How proceedings in consular courts shall be held.

SEC. 155. That all proceedings in the consular courts held in virtue of the provisions of this act shall be had, as far as possible, in conformity and correspondence with the proceedings which, in like cases, would be had according to the law and practice in the United States, regard being had to the difference of local circumstances.

Consular judicial officers responsible as such.

SEC. 156. That all consuls-general and consuls aforesaid shall be responsible for their conduct to the United States, and to the laws thereof, not only as consular officers but as judicial officers, when they perform judicial duties, and shall be held liable for all negligences and misconduct as public officers.

Consular officers solely responsible.

SEC. 157. That in all cases which may be heard and determined in the consular courts of the United States under the present act the consular officer is solely responsible; and no directions from the minister of the United States residing in such country will relieve the consular officer from any share of this responsibility.

Courts authorized to procure evidence of power by application to the Secretary of State.

SEC. 158. That if in any suit or other proceedings, whether civil or criminal, in any consular court under the jurisdiction of the United States, any issue or question of law or of fact shall arise, for the due determination whereof it shall, in the opinion of the consular judge or of such court, be necessary to produce evidence of the existence of any such power or jurisdiction as aforesaid, or of the extent thereof, it shall be lawful for the judge of any such court, and he is hereby authorized, to transmit, under his hand and seal, to the Secretary of State, the question or questions by him properly framed, respecting such of the matters aforesaid as it may be necessary to ascertain in order to the due determination of any such issue or question as aforesaid; and the Secretary of State, as the case may be, is hereby empowered and required, within a reasonable time in that behalf, to cause proper and sufficient answers to be returned to all such questions and to be directed to the said judge, or his successors; and such answers shall, upon production thereof, be final and conclusive evidence in such suit or other proceedings, of the several matters therein contained and required to be ascertained thereby.

Consular interpreters to be appointed.

SEC. 159. That the President of the United States, upon the recommendation of the Secretary of State, may appoint interpreters to the consulates of the United States, at the ports or places hereinafter named, if deemed expedient, and the duties of such interpreters shall be such as the principal consular officer may direct in the transaction of the official correspondence and interpretation of the consulate.

Marshals to be appointed.

SEC. 160. That the President of the United States, upon the recommendation of the Secretary of State, may appoint marshals of consular courts, not to exceed two in number, who shall be citizens of the United States, and to be assigned to the consulates of the United States, at the ports hereinafter named, and the duties of such marshals shall be such as are hereinafter prescribed; and the said marshals shall each give bond for the faithful performance of the duties of the office, before entering upon the duties of the same, which bond shall be in a penal sum not to exceed ten thousand dollars, with two sureties to be approved by the Secretary of State, and a certified copy thereof shall be lodged in the office of the minister; and in case any person aggrieved by the misconduct of any of the said marshals should desire to bring suit upon any of the said bonds, it shall be the duty of the Secretary of State, or the minister having custody of a copy of the same, to furnish the person so applying with a certified copy thereof, upon which copy so furnished and certified suit may be brought and prosecuted with the same effect as could be done upon

Marshals to give bonds.

the original: *Provided*, That upon a plea of non est factum, verified upon oath, or any other good cause shown, the court or the consul or minister trying the cause may require the original to be produced; and when so required it shall be the duty of the Secretary of State to forward the original bond to the court or consul or minister requiring the same: *And provided further*, That before a copy of any such bond shall be furnished for suit it shall be the duty of the Secretary of State, or the minister to whom the application is made, to require prima facie proof, to be judged of by the Secretary of State, or the minister having charge of the copy, that there is probable cause of action against the marshal making the bond: *And provided further*, That all rules, orders, writs, and processes of every kind which are intended to operate or be enforced against any of the said marshals in any of the countries hereinafter named shall be directed to, and executed by, such person as may be appointed for that purpose by the minister or consul issuing the same.

SEC. 161. That the Secretary of State, upon the recommendation of the principal consular officer at the port or place where required, may appoint constables of consular courts at the ports or places hereinafter named, and the duties of such constables shall be such as are hereinafter prescribed; but no such appointment shall be made unless the Secretary of State has been advised of all the reasons for such appointment, and shall be satisfied that the efficiency of the consular service and the preservation of order among the citizens of the United States, resident at the ports or places where such officers are allowed, will be promoted thereby; and in the case of each of the said constables the Secretary of State may prescribe what surety shall be given to secure the faithful performance of duties which may be imposed upon them.

Constables of consular courts to be appointed.

SEC. 162. That there shall be appointed, under the provisions of this portion of this act, consular interpreters and marshals and constables of consular courts at the following-named places:

Places at which consular interpreters, &c., shall be appointed.

Interpreters: Amoy, (China,) Bangkok, (Siam,) Canton, (China,) Chin-Kiang, (China,) Constantinople, (Turkey,) Foo-Chow, (China,) Hioga and Osaka, (one, Japan,) Kanagawa, or at the place of official residence of the consul-general of the United States in Japan, Muscat, (Africa,) Nagasaki, (Japan,) Shanghai, (China,) Swatow, (China,) Tien-Tsin, (China,) Tangier, (Africa,) Tripoli, (Africa,) Tunis, (Africa;) sixteen in number.

Marshals of consular courts: Kanagawa, or at the place of official residence of the consul-general of the United States in Japan, and Shanghai, China; two in number.

Constables of consular courts: Amoy, Canton, Chin-Kiang, Foo-Chow, Hankow, Swatow, Tien-Tsin, in the empire of China; Hioga and Osaka, (one,) and Nagasaki, in Japan, and Constantinople, in Turkey; ten in number.

And jailers, if deemed necessary, in number equal to the number of consular jails authorized under the provisions of this act.

And the annual salaries of such consular interpreters and marshals and constables and jailers shall be in accordance with the provisions made thereto in section thirty-six of this act fixing the annual salaries of consular officers and others in the consular service of the United States.

SEC. 163. That the term of the appointment of all consular interpreters and marshals and constables shall be during the pleasure of the President, and all constables of consular courts during the pleasure of the Secretary of State, and no removals shall be made upon the recommendation of any principal consular officer over them except as hereinafter provided.

The term of appointment of consular clerks, interpreters, marshals, and constables.

SEC. 164. That no consular interpreter or marshal appointed under the provisions of this act shall be removed except for cause assigned, to be stated in writing, and to be first approved by the consul-general under whose jurisdiction the consulate to which the consular interpreter or marshal belongs, and to be further sanctioned by the President of the United States; and in the removal of a constable of a consular court the same as herein provided shall apply, except that such removal shall be sanctioned by the Secretary of State instead of the President.

Removals of consular clerks, &c.

SEC. 165. That it shall be the duty of the said marshals and constables, respectively, to execute process issued by the ministers of the United States in the said countries respectively, or by the consul-general or consul, or any one acting in their stead, at the port or place at which they reside, and to make due return of the same to the officer by whom

Duties of marshals and constables of consular courts.

the same was issued, and to conform in all respects to the regulations prescribed by the Secretary of State in regard to their duties.

May appoint jailers.

SEC. 166. That the Secretary of State may, upon the request of the principal consular officer, authorize the employment of jailers or other menials at such consulates where the same may seem indispensable for the reasons given.

Regulations for the government of consular courts to be established.

SEC. 167. That in order to organize and to carry into effect the system of jurisprudence demanded by such treaties, the Secretary of State and the Secretary of the Treasury, or some person appointed by them respectively on their behalf, and the Superintendent of the Consular Service, shall constitute a board to prescribe, from time to time, regulations for the government of proceedings in the consular courts of the United States, and to be used by any consular officer of the United States exercising judicial power, that is to say : To prescribe the forms of proceeding in civil cases, summons, pleadings; arrest and bail; claim and delivery; injunction, attachment, deposit in court; appointment of receivers; trial and judgment; issues, and their disposition; trials with assessors; how exceptions are to be taken, new trials commenced, executions to be issued and served; proceedings in matters supplemental to execution; foreclosing mortgages; how appeals are to be made, when, and in what matters; confession of judgment; submitting a controversy without action; how compromises may be effected; relating to witnesses; in what cases depositions may be taken and how; administration of oaths and affirmations; inspection of documents and writings; how writs of certiorari are to be acted upon; relating to writs of mandamus; relating to marriage, divorce, birth, and death; relating to steamers, vessels, and boats; matters relating to costs and fees; forms in dealing with habeas corpus; how to appoint and qualify assessors; and how criminal cases are to be proceeded with; and generally, without further enumeration, to make all such decrees and regulations from time to time needed and not inconsistent with the provisions of this act; and all such rules and regulations shall receive the approval of the President of the United States, and shall be binding and obligatory until annulled or modified by Congress; and that such approbation or disapproval may be had, it shall be the duty of the Secretary of State to submit all regulations, orders, or decrees to Congress, at the earliest moment after publication; and the regulations so prescribed shall go into operation as soon as practicable after the commencement of this act.

Consular officers to make suggestions.

SEC. 168. That it shall be the duty of all consuls of the United States exercising judicial powers under this act to report in writing, from time to time, to the consul-general or ranking consul of the countries in which they reside, respectively, all changes, modifications, or alterations which they may think necessary for the promotion of justice in the consular courts of the United States; and the said consul-general or ranking consul shall forward the same, with his opinions, to the Secretary of State, to be by him referred to the board provided for the preparation of regulations for the government of proceedings in consular courts and defining the duties of consular officers exercising judicial powers, to be by the said board acted upon in accordance with the provisions of the last before-mentioned section of this act.

All fines and fees incident to consular courts to be accounted for and remitted to the Secretary of the Treasury.

SEC. 169. That all fines and fees received under the proceedings of the consular courts of the United States, whether by the consular officer in the exercise of his judicial powers, or the marshal or constable, in serving any process or papers whatever, shall be accounted for, at the end of each quarter, by the consular officer at the port, to the Secretary of the Treasury, on behalf of the Government of the United States; and all balances still remaining, after defraying any expenses on account of the consulate, shall be remitted to the Secretary of the Treasury at the times aforesaid; and at the end of each fiscal year a general account of the same shall be inclosed with the reports of the consular officer respecting the exercise of judicial functions by himself during the said year; and the transmission of all accounts of fees and reports made shall be governed by the same rules as hereinbefore prescribed for consular fees and accounts.

Consular courts to be courts of record.

SEC. 170. That all consular courts of the United States shall be courts of record; and that the minutes of proceedings taken therein shall, in all cases, be drawn up and preserved with the depositions of the witnesses, and such minutes shall be signed by the officer holding the court, and shall, in cases where assessors are present, be open for the inspection of such assessors, and for their signature, if concurred in by them; and

all fees received on account of any copies of any records or documents in the possession of the court shall be accounted for as required for other services incident to the consular court or its officer; and in the collection of, and accounting for, fees of all kinds derived from the services of consuls as judicial officers, the same rules shall govern such fees as prescribed in this act for other fees.

SEC. 171. That all citizens of the United States of America residing within any of the countries named in this act, after reasonable public notice to that effect has been given by the consular officer of the United States within whose district they may be residing, shall enroll themselves in a register to be kept by such consular officer; and every citizen of the United States, after the commencement of this act, arriving at any place within the said dominions wherein a consular office of the United States is maintained, saving and except any citizen of the United States borne on the muster-roll of any ship or vessel of the United States arriving in the ports of such countries, shall, within a reasonable period, not to exceed thirty days after his arrival, enroll himself in such register, to be kept as aforesaid, and for that purpose he is required to apply in person at the consulate of the United States; and any citizen of the United States who shall refuse or neglect so to enroll himself, and shall not be able to excuse, to the satisfaction of the consular officer, his refusal or neglect, he shall not be entitled to require to be recognized or protected as a citizen of the United States, in any difficulties whatsoever in which he may be involved within the jurisdiction of such countries, and shall be subject to a fine of ten dollars; and in all cases where an applicant to be enrolled cannot furnish a passport or other legal proof of his citizenship, he shall be required to make an affidavit, in writing, that he is a citizen of the United States, which affidavit shall be filed by the consul-general, consul, or vice-consul; and the said consul-general, consul, or vice-consul shall also, if he think necessary, require other and further proof of the fact before enrolling such persons.

A register of citizens of the United States to be kept.

SEC. 172. That no fee or remuneration whatsoever shall be demanded or received by any consular officer of the United States for or on account of the enrollment of any citizen of the United States in the register aforesaid; and a notification of the period within which such enrollment must be effected shall be exhibited in some conspicuous place in the consular office; and any neglect to give such notification, if proven by any person, shall subject the consular officer to the penalty prescribed in this act for neglect to post a list of consular fees in a public place in his consulate.

No fee to be charged for enrollment.

SEC. 173. That as far as the provisions of this act, as hereinafter mentioned, may be applicable to crimes and offenses committed by citizens of the United States in any part of the dominions of the Sublime Porte, inclusive of Egypt, the same shall be executed by consuls-general and consuls of the United States, in conformity with existing treaties with the said country, or any treaties which may be hereafter made; and the said consuls-general and consuls are hereby ex officio vested with the powers herein conferred upon such the said officers in China for the purposes above expressed, so far as regards the punishment of crime, and also for the exercise of jurisdiction in civil cases, wherein the same is permitted by the laws of Turkey, or its usages, in its intercourse with the Franks or other foreign Christian nations.

The act as applied to the Turkish dominions.

SEC. 174. That the provisions of this act relating to the exercise of judicial powers shall extend to Egypt, and the consul-general for the said country, officially residing at Cairo, shall have the power so far as in conformity with the treaty between the United States and the Sublime Porte, and as allowed to be exercised by the consul-general or consul residing in a country where there is no minister.

Application to Egypt.

SEC. 175. That the provisions of this act as applied to the exercise of judicial powers by consuls, so far as the same are or may be in conformity with the stipulations in the existing or any future treaties between the United States and Tripoli, Tunis, Morocco, and Muscat, respectively, shall extend to those countries, and shall be executed, in conformity with the provisions of the said treaties and the provisions of this act, by consuls appointed by the United States to reside therein, who are hereby ex officio invested with the powers herein delegated to consuls of the United States to reside in the countries, so far as the same can be exercised under the provisions of treaties between the United States and the several countries mentioned in this section, and in accordance with the usages of the said countries in their intercourse with the Franks or other foreign Christian nations.

Application of judicial power to the Barbary States.

The act as applied to Persia.

SEC. 176. That the provisions of this act relating to the judicial powers of consuls be, and the same are hereby, extended to Persia, in respect to all suits and disputes which may arise between citizens of the United States therein; and the consuls who may be appointed to reside in Persia are hereby invested, in relation to the said suits and disputes, with such powers as are by this portion of this act conferred upon consuls in China, and all suits and disputes arising in Persia, between Persian subjects and citizens of the United States, shall be carried before the Persian tribunal, to which such matters are usually referred, at the place where a consul or agent of the United States may reside, and shall be discussed and decided according to equity, in the presence of an employé of the consul or agent of the United States; and it shall be the duty of the consul to attend the trial in person, and see that justice is administered, and all suits and disputes occurring in Persia between the citizens of the United States and the subjects of other foreign powers shall be tried and adjudicated by the intermeditation of their respective consuls, in accordance with such regulations as shall be mutually agreed upon by the minister of the United States, for the time being, and the ministers of such foreign powers respectively, which regulations shall from time to time be submitted to the Secretary of State.

Judicial powers in uncivilized countries.

SEC. 177. That the consuls of the United States at islands or in countries not inhabited by any civilized people, or recognized by any treaty with the United States, be, and the same are hereby, authorized to try, hear, and determine all cases in regard to civil rights, whether of person or property, where the real debt and damages do not exceed the sum of one thousand dollars, exclusive of costs; and upon full hearing of the allegations and evidence of both parties, to give judgment according to the laws of the United States, and according to the equity and right of the matter, in the same manner as justices of the peace are now authorized and empowered where the United States have exclusive jurisdiction. And the said consuls, respectively, are hereby invested with the powers conferred by this act, in such countries, for trial of offenses and misdemeanors.

Application of judicial powers to other uncivilized countries.

SEC. 178. That the provisions of this act relating to the exercise of judicial powers of consuls shall, in the same manner, extend to any country of like character, as hereinbefore mentioned, with which the United States may hereafter enter into treaty relations.

Superior authority over consular courts.

SEC. 179. That the superior judicial authority over consular courts of the United States in foreign countries, in all matters not inconsistent with the provisions of this act, is hereby vested in the Secretary of State; but in no wise shall this superior judicial authority be construed to relate to any matters of accounts, whether relating to fines, fees, or accounts in the settlement of the estates of citizens of the United States dying abroad. And in all cases relating to commerce, mercantile interests, ships, masters, seamen, or the affairs of citizens of the United States dying abroad, it shall be the duty of the consul to make return of the same, also, to the Secretary of the Treasury, in the manner and at such time as may be determined by the Secretary of the Treasury.

Consul-general or consul of the highest class to have supervisory powers over consuls in judicial matters.

SEC. 180. That the consul-general, or, if there be no consul-general, then the consul highest in rank in the country, shall exercise a supervisory authority over the judicial acts of all vice-consuls-general, consuls, or vice-consuls residing at ports or places within the countries or under the jurisdiction of the countries in which they reside respectively, and in the exercise of these supervisory powers they shall see that all the provisions of this act in respect to the exercise of judicial powers, as herein provided, are faithfully administered, and be governed as far as applicable by the provisions of this act relating to supervisory powers in other cases.

Powers of vice-consuls-general and vice-consuls in the award of punishments.

SEC. 181. That no vice-consul-general or vice-consul shall have power to award punishment, unless holding a commission from the Government of the United States, and any vice-consul-general or vice-consul not so commissioned, after having inquired of, tried, and determined any case of which he shall have had cognizance in pursuance of this act, shall report his proceedings and transmit the depositions to the principal consular officer of his district, and such principal consular officer shall have power to award punishment in the same manner as if the case had been inquired of, tried, and determined by himself.

SEC. 182. That any person acting temporarily and with the joint approval of the Secretary of State and the Secretary of the Treasury as consul or vice-consul, shall be competent to do all things which, by the several acts of Congress, consuls or vice-consuls are empowered to do.

Persons acting temporarily as consuls to have power.

SEC. 183. That the consuls of the United States, exercising judicial powers, shall in all matters co-operate with ministers of the United States where so prescribed by treaty, act of Congress, or regulations.

Consuls to co-operate with ministers of the United States.

SEC. 184. That each of the consuls-general, vice-consuls-general, consuls, and vice-consuls aforesaid, at the port for which he is appointed, shall be competent, under the authority herein contained, upon facts within his own knowledge, or which he has good reason to believe true, or upon complaint made, or information filed in writing and authenticated in such ways as shall be prescribed by the board hereinbefore constituted, to issue his warrant for the arrest of any citizen of the United States charged with committing in the country an offense against law, and, when arrested, to arraign and try any such offender, and, upon conviction, to sentence him to punishment in the manner hereinafter prescribed, always meting out punishment in a manner proportioned to the offense, which punishment shall in all cases, except as is hereinafter otherwise provided, be either fine or imprisonment.

May issue warrants for arrest of citizens of the United States, &c.

SEC. 185. That in regard to civil rights, whether of property or person, the said consuls-general, vice-consuls-general, consuls, and vice-consuls are hereby invested with all the judicial authority necessary to execute the provisions of all treaties as aforesaid respectively, and shall entertain jurisdiction in matters of contract at the port at which, or nearest to which, the contract was made, or at the port at which, or nearest to which, it was executed; and in all other matters at the port where, or nearest to which, the cause or controversy arose, or at the port where, or nearest to which, the damage complained of was sustained, any such port above named being always one of the ports at which the United States are represented by consuls-general or consuls; which jurisdiction shall embrace all controversies between citizens of the United States or others, provided for by such treaties, respectively.

Civil rights.

SEC. 186. That such jurisdiction in criminal and civil matters shall, in all cases, be exercised and enforced in conformity with the laws of the United States, which are hereby, so far as is necessary to execute such treaties, respectively extended over all citizens of the United States in the said countries, and over all others to the extent that the terms of the said treaties, respectively, justify or require, so far as such laws are suitable to carry the said treaties into effect; but in all cases where such laws are not adapted to the object, or are deficient in the provisions necessary to furnish suitable remedies, the common law, including equity and admiralty, shall be extended in like manner over such citizens and others in the said countries; and if defects still remain to be supplied, and neither common law, including equity and admiralty, nor the statutes of the United States, furnish appropriate and suitable remedies, these deficiencies will be submitted in writing by the consul to the consul-general or ranking consul of the country in which he resides; the consul-general or ranking consul will then submit the same, with any comments he may have to offer upon the same, to the Secretary of State, who will submit the same for investigation and decision to the board hereinbefore constituted for the preparation of rules and regulations for the government of proceedings in the consular courts of the United States, and the action of such board will be sanctioned and governed by the same rules as hereinbefore prescribed for the preparation of general rules and regulations for the use of the said consular courts.

How such jurisdiction shall be exercised.

SEC. 187. That any consul when sitting alone for the trial of offenses or misdemeanors shall finally decide all cases where the fine imposed does not exceed one hundred dollars, or the term of imprisonment does not exceed sixty days; and there shall be no appeal therefrom, except as hereinafter provided; but no fine imposed by a consul-general or consul, for a contempt committed in the presence of the court, or for failing to obey a summons from the same, shall exceed fifty dollars, nor shall the imprisonment exceed twenty-four hours for the same contempt.

What cases may be decided by consuls alone.

SEC. 188. That when sitting alone the consul may also decide all cases in which the fine imposed does not exceed five hundred dollars or the term of imprisonment does not exceed ninety days; but in all such cases, if the fine exceeds one hundred dollars, or the term of imprisonment for misdemeanor exceeds ninety days, the defendants, or any of them, if there be more than one, may take the case by appeal before

Certain cases decided by consuls sitting alone may be appealed.

the minister of the United States, if allowed jurisdiction, either upon errors of law or matters of fact, under such rules as may be prescribed by the board hereinbefore mentioned for the prosecution of appeals in such cases.

Assessors to be appointed in cases where legal questions involved.

SEC. 189. That whenever in any case the consul shall be of opinion that, by reason of the legal questions which may arise therein, assistance will be useful to him, or whenever he shall be of opinion that a severer punishment than those hereinbefore specified will be required, he shall, in either case, summon one or more citizens of the United States, not exceeding four in number, taken by lot from a list of individuals which shall have been submitted previously to the minister for his approval, but in capital cases not less than four, who shall be persons of good repute and competent to the duty, to sit with him in the trial, and who, after so sitting upon the trial, shall each enter upon the record his judgment and opinion and sign the same. The consul shall, however, give judgment in the case; but if his decision is opposed by the opinion of one or more of his associates, the case without further proceedings, together with the evidence and opinions, shall be referred to the minister for his final adjudication, either by entering up judgment therein, or remitting the same to the consul, with instructions how to proceed therewith; but in all such cases, except capital offenses, if the consul and his associates concur in opinion, the decision shall be final, except as hereinbefore provided.

Assessors to be appointed in certain civil cases.

SEC. 190. That the consuls aforesaid, and each of them, at the port for which he is appointed, shall have jurisdiction as is herein provided in all civil cases arising under treaties with the countries hereinbefore named, respectively, wherein the damage demanded does not exceed the sum of five hundred dollars; and if he sees fit to decide the same without aid, his decision thereon shall be final; but if, in his judgment, any case involves legal perplexities, and assistance will be useful, or if the damage demanded exceeds five hundred dollars, in either such case it shall be his duty to summon to his aid, from a list of individuals which shall have been nominated for the purposes of such trials to the minister and received his approval, not less than two nor more than three citizens of the United States, if such are residing at the port, of good repute and competent to the duty, who shall with him hear any such case; and if the consul and his associates concur in opinion, the judgment shall be final; but if the associates, or any of them, differ from the consul, the opinions of all shall be noted on the record, and each shall subscribe his name to his assent to, or dissent from, the consul, with such reasons therefor as he thinks proper to assign, and either party may thereupon appeal, under such regulations as may exist, to the minister; but if no appeal is lawfully claimed, the decision of the consul shall be final and conclusive.

Evidence to be taken in writing.

SEC. 191. That in all cases, criminal and civil, the evidence shall be taken down in writing in open court, under such regulations as may be made for that purpose; and all objections to the competency or character of testimony shall be noted, with the ruling in all such cases, and the evidence shall be part of the case.

Ministers may hear appeals.

SEC. 192. That the minister of the United States in the country to which he is appointed shall be fully authorized to hear and decide all cases, criminal and civil, which may come before him, by appeal, under the provisions of this act; and to issue all processes necessary to execute the power conferred upon him; and he is hereby fully empowered to decide finally any case upon the evidence which comes up with it, or to hear the parties further if he thinks justice will be promoted thereby; and such ministerial courts in all such trials by appeal, in the granting of new trials or in any other matters authorized by this act, will be governed by such rules as may be prescribed in the same manner by the board hereinbefore mentioned for the preparation of rules and regulations for the government of consular courts of the United States.

Punishment to be according to magnitude of the case.

SEC. 193. That in all cases, except as herein otherwise provided, the punishment for crime provided for by this act shall be by fine or imprisonment, or both, at the discretion of the officer who decides the case, but subject to the regulations prescribed for the government of the court and such as may hereafter be made; it shall, however, be the duty of each and every officer to allot punishment according to the magnitude and aggravation of the offense; and all who refuse or neglect to comply with the sentence passed upon them, shall stand committed until they do comply, or are discharged by order of the consul, with the consent of the minister in the country.

SEC. 194. That murder and insurrection, or rebellion against the government of either of the said countries, with intent to subvert the same, shall be capital offenses, punishable with death; but no person shall be convicted of either of said crimes unless the consul and his associates in the trial all concur in opinion, and the minister also approves of the conviction; but it shall always be lawful to convict one put upon trial for either of these crimes of a lesser offense of a similar character, if the evidence justifies it; and when so convicted, to punish, as for other offenses, by fine or imprisonment, or both.

Punishment of murder and insurrection.

SEC. 195. That whenever any one shall be convicted of either of the crimes punishable with death, as aforesaid, in either of the said countries, it shall be the duty of the minister to issue his warrant for the execution of such convict, appointing the time, place, and manner; but if the said minister shall be satisfied that the ends of public justice demand it, he may, from time to time, postpone such execution; and if he finds mitigating circumstances which may authorize it, he may submit the case to the President of the United States for pardon.

How criminals shall be executed.

SEC. 196. That in all criminal cases which are not of a heinous character it shall be lawful for the parties aggrieved or concerned therein, with the assent of the minister in the country, or consul, to adjust and settle the same among themselves, upon pecuniary or other considerations.

Arbitration recommended in certain criminal cases.

SEC. 197. That it shall be the duty also of the said ministers and consuls to encourage the settlement of controversies of a civil character by mutual agreement, or to submit them to the decision of referees, agreed upon by the parties, a majority of whom shall have power to decide the matter; and it shall be the duty of the board, as aforesaid, to prepare a form of submission for such cases, to be signed by the parties and acknowledged before the consul; and when the parties have so agreed to refer, the referees may, after suitable notice of the time and place of meeting for trial, proceed ex parte, in case either party refuses or neglects to appear, and, after hearing any case, may deliver their award, sealed, to the consul, who, in court, shall open the same; and if he accepts it, he shall indorse the fact, and judgment shall be rendered thereon, and execution issued in compliance with the terms thereof: *Provided, however,* That the parties may always settle the same before return thereof is made to the consul.

Settlements by mutual agreement recommended in civil cases.

SEC. 198. That in certain cases, it being expedient that such crimes and offenses committed within such foreign countries or places as aforesaid should be inquired of, tried, determined, and punished within the United States, it shall and may be lawful for any consular officer of the United States of America, having authority derived from the Government of the United States in that behalf, by warrant under the hand and seal of the Secretary of State, to cause any person charged with the commission of any crime or offense, the cognizance whereof may at any time appertain to any consular or other officer of the United States within any such country or place as aforesaid, to be sent for trial to the United States as the Secretary of State may appoint; and upon the arrival of such person within the United States, it shall and may be lawful for any of the courts of the United States exercising criminal jurisdiction to cause such person to be kept in safe and proper custody, and, so soon as conveniently may be, to inquire of, try, and determine such crime and offense, and, upon conviction of the person so charged as aforesaid, to punish him according to the laws in force in that behalf in the United States, in the same manner as if the said crime or offense had been committed within the jurisdiction of such United States court: *Provided always,* That before any such person shall be sent for trial to the United States as aforesaid, it shall be lawful for him to tender for examination to the consular or other proper officer of the United States to whom the cognizance of the crime or offense with which he is charged may appertain, within the country or place where the same may be alleged to have been committed, any competent witness or witnesses, the evidence of whom he may deem material for his defense, and whom he may allege himself to be unable to produce at his trial in the United States; and the said consular or other proper officer of the United States shall thereupon proceed in the examination and cross-examination of such witness or witnesses, in the same manner as though the same had been tendered at a trial before such consular or other proper officer of the United States, and shall cause the evidence so taken to be reduced into writing, and shall transmit a copy of such evidence

Power to send persons charged with crimes for trial to the United States.

to the United States court before which the trial of such person is to take place, together with a certificate, under his hand and seal, of the correctness of such copy; and thereupon it shall be lawful for the said United States court, and it is hereby required, to allow so much of the evidence so taken as aforesaid as would have been admissible according to the law and practice of the said United States court had the said witness or witnesses been produced and examined at the trial before the said court, to be read and received as legal evidence at such trial: *Provided also*, That if it shall be made to appear at such trial that the laws by which the person charged with any criminal act would have been tried had his trial taken place before a consular or other proper officer of the United States in the country or place in which such act may be alleged to have been committed, varying from or are inconsistent with the laws in force in the United States, in respect either of the criminality of the act charged, or of the nature or degree of the alleged crime or offense, or of the punishment to be awarded for the same, such court of the United States is hereby empowered and required to admit and give effect to the laws by which such person would have been so tried as aforesaid, so far as, but not further or otherwise than, the same relate to the criminality of such act, or to the nature or degree of such crime or offense, or to the punishment thereof: *Provided also*, That nothing herein contained shall be construed to alter or repeal any law, statute, or usage by virtue of which any crime or offense committed out of the United States might, at the time of the passing of this act, be inquired of, tried, determined, and punished within the United States, but the same shall remain in full force and effect, anything herein contained to the contrary notwithstanding.

Power to send
convicts for exe-
cution or impris-
onment to the
United States.

SEC. 199. That if any offender shall have been sentenced to suffer death or imprisonment for or in respect of any crime or offense of which such offender shall have been lawfully convicted, before any consular or other proper officer of the United States, within any such country or place as aforesaid, it shall be lawful for any person having authority expressed in writing from the Secretary of State in that behalf, by warrant under his hand and seal, to cause such offender to be sent to the United States, as he may designate, in order that the sentence so passed upon such offender may be carried into effect within the same; and the magistrates, jailers, and other officers to whom it may appertain to give effect to any sentence passed by the United States courts exercising criminal jurisdiction within the United States are hereby empowered and required to do all acts and things necessary to carry into effect the sentence so passed upon such offender, in the same manner as though the same had been passed by such United States court.

Limitation of
actions.

SEC. 200. That if any suit or action shall be brought, in any United States court, against any person or persons for anything done in pursuance of any such power or jurisdiction of any consular or other proper officer of the United States as aforesaid, or of this act, then, and in every such case, such action or suit shall be commenced or prosecuted within six months after the fact committed, and not afterward, except where the cause of action shall have arisen in a foreign country, and then within six months after the plaintiff or plaintiffs, and defendant or defendants, shall have been within the jurisdiction of the court in which the same may be brought; and the same, and every such action or suit, shall be brought at or near the place where the cause of action shall have arisen, and not elsewhere, except where the cause of action shall have arisen without the jurisdiction of the United States; and the defendant or defendants shall be entitled to the like notice, and shall have the like privilege of tendering amends to the plaintiff or plaintiffs, or their agent or attorney, as is provided in actions brought against any judge or magistrate for acts done in the execution of their offices; and the defendant or defendants, in every such action or suit, may plead the general issue, and give special matter in evidence; and if the matter or thing complained of shall appear to have been done under the authority and in execution of any such power or jurisdiction as aforesaid, or of this act, or of any such action, or if suit shall be brought after the time limited for bringing the same, or be brought and laid in any other place than the same ought to have been laid in, as aforesaid, then the jury shall find for the defendant or defendants; and if the plaintiff or plaintiffs shall become nonsuit or discontinue any action after the defendant or defendants shall have appeared, or if a verdict shall pass against the plaintiff or plaintiffs, or if upon demurrer judgment shall be taken against the plaintiff or plaintiffs, the defendant or defendants shall and

may recover treble costs, and have the like remedy for recovery thereof as any defendant or defendants take or have in any cases of law.

SEC. 201. That in all cases, in any of the countries named in this portion of this act, where a consular officer of the United States shall happen to be interested, either as a party or as a witness, the minister of the United States in the said countries, respectively, shall have original jurisdiction, and shall try, hear, and determine such cases according to the rules prescribed by this act. Ministers to have original jurisdiction in cases where consuls interested.

SEC. 202. That when any final judgment of the minister is given in the exercise of original or appellate criminal jurisdiction or in original or appellate jurisdiction in matters where the amount in dispute, exclusive of costs, exceeds the sum of three thousand dollars, an appeal may be made, and for that purpose a transcript of all necessary papers and proceedings in the case shall be submitted to the Secretary of State, under whose supervision the case shall be submitted to any United States court in the District of Columbia having jurisdiction, and no new evidence shall be received on the hearing of the appeal, and the appeals shall be subject to such rules, regulations, and restrictions prescribed in law for writs of error in any of the said courts; and the courts hereinbefore named, or any of them, are hereby authorized and required to receive, hear, and determine the appeals hereinbefore mentioned, and the decision of the court shall be final. Appeal from the minister in criminal cases, &c.

SEC. 203. That on any final judgment in a consular court of the United States where the matter in dispute exceeds five hundred dollars exclusive of costs, an appeal shall be allowed to the minister in the countries respectively, and in all cases such appeals must be governed by the rules and regulations prescribed as hereinbefore mentioned, and all such ministers are authorized and required to receive, hear, and determine such appeals. Appeals from the consuls.

SEC. 204. That the appeals allowed by the provisions of this act shall only be admitted in cases arising after this act shall take effect. When appeals shall begin.

SEC. 205. That consuls of the United States in countries where judicial powers are allowed shall keep a police report, in form to be prescribed by the Secretary of State, and will deliver to the minister, on his requisition, a copy of the whole or any portion thereof, and on the first day of September of each year a copy of the said report for the whole year will be sent to the Secretary of State. A police report to be kept.

SEC. 206. That all citizens of the United States sent out of the country by order of the consul, for cause stated, shall be reported by the consul to the minister and to the Secretary of State, giving the reasons therefor, and the said consul shall declare that the said person shall be no longer protected in the said country as a citizen of the United States, and any person twice convicted in a consular court for any offense shall be sent out of the country and not be allowed to return. Citizens sent out of the country to be reported.

SEC. 207. That it shall be the duty of consuls exercising judicial powers to report to the Secretary of State each year, on the first day of September, the condition and extent of the judicial business within their jurisdiction respectively during the previous year, and at the same time shall make returns of civil suits adjudicated at their consulates during the same period, and the said returns shall be made in accordance with Schedule B to this act appended, and any other returns which shall at any time be required by the Secretary of State shall be made as directed by the said officers respectively. Returns of civil suits to be made.

SEC. 208. That the powers heretofore exercised by diplomatic representatives of the United States in any of the countries in which judicial functions are accorded to ministers and consuls shall continue to be so exercised, except where such powers are inconsistent with the provisions of this act. Powers of ministers the same as before except in certain cases.

SEC. 209. That the Secretary of the Treasury be, and he is hereby, authorized to allow, in the adjustment of the accounts of each of the said consuls, the actual expenses of the rent of suitable buildings, or parts of buildings, to be used as prisons for American convicts in the countries hereinbefore named where consuls are permitted to exercise judicial powers, not to exceed, in any case, the rate of six hundred dollars a year; and, also, the wages of the keepers of the same and for the care of offenders, not to exceed, in any case, the sum of one thousand dollars per annum. Provisions for the payment of expenses incidental to the judicial powers of consuls.

SEC. 210. That no consular prisons for American convicts shall be allowed in any of the countries aforesaid, except upon the written statement of the reasons therefor, by the consul of the United States residing in the country. No prisons to be opened except with the sanction of the Pr

dent at the port, which must be forwarded to the consul-general or ranking consul of the United States in the country, and be approved, or otherwise, by him, giving reasons in either case, and then be forwarded to the Secretary of State for the sanction of the President of the United States; and in no case shall such prison be allowed unless the consular officer requesting the same makes oath or affirmation that the place is secure and suitable, and is expressly and solely devoted to that purpose.

Consuls may call upon the local authorities to assist them.

SEC. 211. That the consuls-general and consuls aforesaid shall be fully authorized to call upon the local authorities to sustain and support them in the execution of the powers confided to them by said treaty, and on their part to do and perform whatever is necessary to carry the provisions of said treaties into full effect so far as they are to be executed in the said countries respectively.

Annual reports to be made of the means of executing sentences.

SEC. 212. That it shall be the duty of all consuls of the United States to report on the first day of September of each year to the Secretary of State upon the means at their disposal for executing sentences of imprisonment, and whenever recourse is had to the prisons of the country it shall be their duty to arrange with the local authorities that any citizen of the United States who may be confined therein may be visited daily by any person appointed by the consul, and, if necessary, by a medical officer deputed for that purpose.

Marriages in the presence of consular officers in foreign countries valid.

SEC. 213. That all marriages, in the presence of any consular officer in a foreign country, between persons who would be authorized to marry if residing in the District of Columbia, shall have the same force and effect, and shall be valid to all intents and purposes, as if the said marriage had been solemnized within the United States. And in all cases of marriage before any consular officer, the said consular officer shall give to each of the parties a certificate of such marriage, and shall also send a certificate thereof to the Department of State, there to be kept; which certificate shall specify the names of the parties, their ages, places of birth, and residence.

CONCLUSION.

Commencement of this act.

SEC. 214. That this act shall come into operation as follows: From section nine to section eighteen, inclusive, to take effect immediately upon the passage of this act, in so much as may be necessary to the organization of the Bureau of the Consular Service, in view of the commencement of the whole act, and the remainder of the act shall commence on the first day of July, eighteen hundred and seventy-three.

SCHEDULE A. [SECTION 90.]

Copies of forms to be used by consular officers of the United States for the prevention of abuse⁸ in the transportation of Chinese passengers in American vessels.

FORM NO. 1.

CONSULATE OF THE UNITED STATES,
_____, _____, 18—.

List of Chinese passengers per American steamer _____, Captain _____, from _____ to _____.

No.	Name in Chinese characters.	Translation of name.	No.	Name in Chinese characters.	Translation of name.
1			5		
2			6		
3			7		
4			8		

NOTE.—The above form is written out and ruled to suit the number of passengers, consular stamp and stamp of Chinese broker on each page. Must contain the signature of the agent of the steamship company or vessel; signature of the captain of the vessel; signature of the consul of the United States.

FORM No. 2.

ON BOARD THE AMERICAN _____,
_____, _____, 18—.

I, interpreter of the United States consulate, do certify that I have personally examined passengers Nos. — to —, in all —, in the presence of —; that the names of the passengers examined by me are written both in Chinese and English on the roll, Form No. 1, herewith; and that the said passengers are bona fide emigrants or passengers to —.

_____,
United States Interpreter.

CONSULATE OF THE UNITED STATES,
_____, _____, 18—.

The total number of passengers examined by me, through my interpreter, as stated above, is —.

_____,
United States Consul.

NOTE.—This form is signed by the interpreter and certified by the consul, and receives the consular seal.

FORM No. 3.

CONSULATE OF THE UNITED STATES,
_____, _____, 18—.

I, _____, do solemnly and truly swear that the persons named in the roll now produced and hereunto annexed are emigrants to —, by the American —, and that the said roll contains a true and faithful list of all the Chinese passengers or emigrants by said ship; and that said passengers are not laborers known as coolies, intended to be transported from this port, or from —, to any port of South America, or the adjacent islands, or others, contrary to the true intent and meaning of the act of Congress approved February twenty-ninth, eighteen hundred and sixty-two, read to me on or before the — day of —, eighteen —, by the United States consul at this port.

Sworn to and subscribed before me.

NOTE.—This form is signed by the agent of the vessel, and receives the consular stamp.

FORM No. 4.

CONSULATE OF THE UNITED STATES,
_____, _____, 18—.

Know all men by these presents that we, _____, _____, and _____, are held and firmly bound to —, United States consul for —, China, in the sum of five thousand dollars, to the payment whereof we bind ourselves jointly and severally, our joint and several heirs, executors, and administrators.

Witness our hands and seals this — day of —, 18—.

The condition of the above obligation is such that if the passengers or emigrants named in the roll herewith, and marked by the said — and —, shall truly and faithfully be landed at the place or places specified in the said roll, then this obligation to be void, otherwise to remain in full force.

_____.

Signed, sealed, and delivered in the presence of—
_____.

NOTE.—This form is signed by the agent of the vessel and the captain of the vessel, and receives the consular stamp and the stamp of the Chinese broker.

FORM No. 5.

CONSULATE OF THE UNITED STATES,
_____, _____, 18—.

I, the undersigned, _____, United States consul, do certify that the roll of emigrants to _____, by the American _____, herewith, was read on board the said vessel, and that the same was explained by me to the parties whose names are subscribed thereto, each of whom personally acknowledged that he fully understood the same, and that he was a bona-fide emigrant or passenger to _____.

_____,
United States Consul.

NOTE.—The signature and seal of the consul are affixed to this form, No. 5.

SCHEDULE B. [SECTION 207.]

RETURNS OF CIVIL SUITS.

Return of civil suits adjudicated at the consulate of the United States during the year, and the number of suits in which American plaintiffs residing within the district have had occasion to resort to the consular court of European powers, and a similar return in which other parties appeared in consular courts of the United States.

FORM No. 1.

CONSULATE OF THE UNITED STATES OF AMERICA AT _____.

Return of civil suits in the year _____, in which the defendants were under protection of the United States.

No.	Date of first proceeding.	Name and nationality of plaintiff.	Name of defendant.	Nature of suit.	Judgment for plaintiff.	Appeal.

FORM No. 2.

CONSULATE OF THE UNITED STATES OF AMERICA AT _____.

Return of civil suits in the year _____, in which the plaintiffs only were under protection of the United States.

No.	Date of first proceeding.	Name of plaintiff.	Name and nationality of defendant.	Nature of suit.	Judgment.	Appeal.	Court of appeal.

FORM NO. 3.

CONSULATE OF THE UNITED STATES OF AMERICA AT ———.

Return of civil suits in the year ———, in which foreign parties in their differences with parties under protection of the United States have submitted to the jurisdiction of American consular court.

No.	Date of first proceedings.	Name and nationality of plaintiff.	Name and nationality of defendant.	Nature of suit.	Judgment.	Appeal.

FORM NO. 4.

LEGATION OF THE UNITED STATES OF AMERICA AT ———.

Return of appeals for decisions of consular courts in civil suits in the year ———.

No.	Date of appeal.	From what court.	Name and nationality of appellant.	Name and nationality of respondent.	Nature of suit.	Judgment.	Further appeal.

SCHEDULE C.—Of acts and parts of acts repealed by the consular act of 187—.

Reference to act.	Title of act.	Extent of repeal.
Statutes at Large, vol. 1, page 255.	An act concerning consuls and vice-consuls, approved April 14, 1792.	The first section of this act was repealed by the act approved July 7, 1798. Section 4 repealed by the thirty-third section of the act approved August 18, 1856. The fifth section was modified by the second, fifth, thirteenth, and thirty-third sections of the act approved August 18, 1856. The seventh and eighth sections repealed by the fifth section of the act of February 28, 1803. The whole of the remainder of the act remaining in force to be repealed.
Statutes at Large, vol. 11, page 203.	An act supplementary to the "Act concerning consuls and vice-consuls, and for the further protection of American seamen," approved February 28, 1803.	The whole act remaining in force.
Statutes at Large, vol. 11, page 651.	An act in addition to the act entitled "An act supplementary to the act concerning consuls and vice-consuls, and for the further protection of American seamen," approved February 28, 1811.	The whole act remaining in force.
Statutes at Large, vol. 4, page 773.	An act to prevent the punishment of consuls, commercial agents, and others in certain cases, approved March 3, 1835.	The whole act.

SCHEDULE C.—*Of acts and parts of acts repealed, &c.*—Continued.

Reference to act.	Title of act.	Extent of repeal.
Statutes at Large, vol. 5, page 394.	An act in addition to the several acts regulating the shipment and discharge of seamen and the duties of consuls, approved July 20, 1840.	The fifth, sixth, and seventh sections of this act already repealed by the thirty-third section of the act approved August 18, 1856. The whole act, except the above sections.
Statutes at Large, vol. 5, page 507.	An act requiring foreign regulations of commerce to be annually laid before Congress, approved August 16, 1842.	The whole act.
Statutes at Large, vol. 5, page 725.	An act to amend the act entitled "An act to provide for the enlistment of boys for the naval service, and to extend the term of enlistment of seamen," approved February 20, 1845.	Section 2 of the act.
Statutes at Large, vol. 5, page 748.	An act to provide for the transportation of the mail between the United States and foreign countries, and for other purposes, approved March 3, 1845.	Section 6 of the act.
Statutes at Large, vol. 9, page 440.	An act to provide for recording the conveyances of vessels, and for other purposes, approved July 29, 1850.	Section 6 of the act.
Statutes at Large, vol. 11, page 139.	An act to amend an act entitled "An act requiring foreign regulations of commerce to be laid annually before Congress, approved August sixteen, eighteen hundred and forty-two, and for other purposes," approved August 18, 1856.	The whole act.
Statutes at Large, vol. 11, page 52.	An act to regulate the diplomatic and consular systems of the United States, approved August 18, 1856.	Sections 3, 4, 5, 6, 7, 8, 11, and all other sections, excepting the thirty-third, which follow thereafter.
Statutes at Large, vol. 11, page 404.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending the thirtieth of June, eighteen hundred and sixty, approved March 3, 1859.	Sections 2 and 3 of the act.
Statutes at Large, vol. 12, page 72.	An act to carry into effect provisions of the treaties between the United States, China, Japan, Siam, Persia, and other countries, giving certain judicial powers to ministers and consuls, or other functionaries of the United States in those countries, and for other purposes, approved June 22, 1860.	So much of the whole act as relates to consular officers, courts, marshals, and jails.
Statutes at Large, vol. 12, page 315.	An act to reduce consular fees for vessels running to or between foreign ports, approved August 5, 1861.	The whole act.
Statutes at Large, vol. 12, page 335.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending the thirtieth of June, eighteen hundred and sixty-three, and additional appropriations for the year ending the thirtieth of June, eighteen hundred and sixty-two, approved February 4, 1862.	So much of the act as relates to the compensation to be allowed to certain consulates therein named.
Statutes at Large, vol. 12, page 340.	An act to prohibit the "coolly trade" by American citizens in American vessels, approved February 19, 1862.	That portion of section 4 relating to the duties of consular officers.
Statutes at Large, vol. 12, page 421.	An act to authorize the President of the United States to appoint diplomatic representatives to the republics of Hayti and Liberia, respectively, approved June 5, 1862.	Such portion of the act as accredits the commissioner of the United States also as consul-general to Hayti, and as relates to the compensation allowed to the commissioner and consul-general of the United States to Liberia.
Statutes at Large, vol. 12, page 638.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June thirtieth, eighteen hundred and sixty-four, approved February 4, 1863.	Such portion of the act as fixes the salary of the consul at Guayamas.
Statutes at Large, vol. 12, page 754.	An act making appropriations for sundry civil expenses of the Government for the year ending June thirty, eighteen hundred and sixty-four, and for the year ending the thirtieth of June, eighteen hundred and sixty-three, and for other purposes, approved March 3, 1863.	Section 24 of the act.
Statutes at Large, vol. 13, page 61.	An act to provide for the collection of hospital dues from vessels of the United States sold or transferred in foreign ports or waters, approved April 29, 1864.	The whole act.
Statutes at Large, vol. 13, page 137.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending the thirtieth of June, eighteen hundred and sixty-five, and for other purposes, approved June 20, 1864.	Such portions of the act as fixes the salaries to be paid to certain consulates therein specified, and sections 2 and 4.

SCHEDULE C.—*Of acts and parts of acts repealed, &c.*—Continued.

Reference to act.	Title of act.	Extent of repeal.
Statutes at Large, vol. 14, page 224.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending thirtieth June, eighteen hundred and sixty-seven, and for other purposes, approved July 25, 1866.	Such portions as fix the salaries to be paid to certain consulates, and so much of section 3 as relates to the application of fees in certain cases.
Statutes at Large, vol. 14, page 332.	An act making appropriations for sundry civil expenses of the Government for the year ending June thirtieth, eighteen hundred and sixty-seven, and for other purposes, approved July 28, 1866.	So much of section 11 of the act as applies to the consulate-general of the United States in Egypt, and to the powers of the agent and consul-general in the said country.
Statutes at Large, vol. 14, page 412.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending thirtieth June, eighteen hundred and sixty-eight, and for other purposes, approved February 28, 1867.	So much of the act as fixes the salaries to be paid to certain consulates therein named.
Statutes at Large, vol. 15, page 57.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending thirtieth June, eighteen hundred and sixty-nine, and for other purposes, approved March 30, 1868.	So much of the act as fixes the salaries to be paid to certain consulates therein specified, and sections 2 and 3.
Statutes at Large, vol. 15, page 265.	An act authorizing the admission in evidence of copies of certain papers, documents, and entries, approved January 8, 1869.	The whole act.
Statutes at Large, vol. 15, page 319.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending June thirtieth, eighteen hundred and seventy, and for other purposes, approved March 3, 1869.	Sections 2, 3, 5, and 6 of the act.
Statutes at Large, vol. 16, page 183.	An act to amend an act entitled "An act to carry into effect provisions of the treaties between the United States, China, Japan, Siam, Persia, and other countries, giving certain judicial powers to ministers and consuls and other functionaries of the United States in those countries, and for other purposes, approved June twenty-second, eighteen hundred and sixty," approved July 1, 1870.	The whole act.
Statutes at Large, vol. 16, page 305.	An act making appropriations for sundry civil expenses of the Government for the year ending June thirty, eighteen hundred and seventy-one, and for other purposes, approved July 15, 1870.	So much of the act as fixes the salary of the consul at Port Said, Egypt.

SCHEDULE D.—*Of acts or parts of acts not to be repealed.*

Reference to act.	Title of act.	Extent not to be repealed.
Statutes at Large, vol. 3, page 729.	An act supplementary to and to amend an act entitled "An act to regulate the collection of duties on imports and tonnage, passed second March, one thousand seven hundred and ninety-nine, and for other purposes," approved March 1, 1823.	Sections 7 and 8 not to be repealed, but to remain as modified or superseded by the first section of the act of March 3, 1863, the act of March 2, 1867, and the provisions of this act.
Statutes at Large, vol. 5, page 548; section 16, page 563, chapter 270.	An act to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other purposes, approved August 30, 1842.	Section 16 not to be repealed except in so far as may be inconsistent with the provisions of this act.
Statutes at Large, vol. 11, page 52.	An act to regulate the diplomatic and consular systems of the United States, approved August 18, 1856.	Sections 1, 2, 9, and 10.
Statutes at Large, vol. 12, page 72.	An act to carry into effect provisions of the treaties between the United States, China, Japan, Siam, Persia, and other countries, giving certain judicial powers to ministers and consuls, or other functionaries of the United States in those countries, and for other purposes, approved June 22, 1860.	Such parts of the act as relate to ministers, their powers, and ministerial courts.
Statutes at Large, vol. 12, page 340.	An act to prohibit the "coolie trade" by American citizens in American vessels, approved February 19, 1862.	The whole act, except that portion of section 4 as relates to the duties of consular officers.
Statutes at Large, vol. 12, page 421.	An act to authorize the President of the United States to appoint diplomatic representatives to the republics of Hayti and Liberia, respectively, approved June 5, 1862.	Such portions of the act as relate to the appointment of diplomatic representatives.

SCHEDULE D.—*Of acts or parts of acts not to be repealed*—Continued.

Reference to act.	Title of act.	Extent not to be repealed.
Statutes at Large, vol. 12, page 558.	An act increasing temporarily the duties on imports, and for other purposes, approved July 14, 1862.	No portions of sections 17, 18, and 19 relating to invoices and the duties of consular officers, unless inconsistent with the provisions of this act.
Statutes at Large, vol. 12, page 737.	An act to prevent and punish frauds upon the revenue, to provide for the more certain and speedy collection of claims in favor of the United States, and for other purposes, approved March 3, 1863.	The whole act, except in so far as may be in conflict with this act.
Statutes at Large, vol. 13, pages 14-17.	An act to increase the internal revenue, and for other purposes, approved March 7, 1864.	That portion of section 8 relating to income tax in the cases of consuls of foreign countries not citizens of the United States.
Statutes at Large, vol. 13, page 137.	An act making appropriations for the consular and diplomatic expenses of the Government for the year ending the thirtieth of June, eighteen hundred and sixty-five, and for other purposes, approved June 20, 1864.	Section 3 of the act.
Statutes at Large, vol. 13, page 201.	An act repealing certain provisions of law concerning seamen on board public and private vessels of the United States, approved June 28, 1864.	The whole act, unless inconsistent with the provisions of this act.
Statutes at Large, vol. 13, page 305.	An act to provide ways and means for the support of the Government, and for other purposes, approved June 30, 1864.	Section 178 of the act.
Statutes at Large, vol. 13, page 217.	An act to increase duties on imports, and for other purposes, approved June 30, 1864.	Section 27 of the act, unless inconsistent with the provisions of this act.
Statutes at Large, vol. 13, page 532.	An act further to provide for the verification of invoices, approved March 3, 1865.	The whole act, except in so far as may be inconsistent with this act.
Statutes at Large, vol. 15, page 226.	An act to amend section one of "An act to prevent and punish frauds upon the revenue, and for other purposes," approved March third, eighteen hundred and sixty-three, approved July 27, 1868.	The whole act, unless inconsistent with the provisions of this act.

PAYMENTS TO THE UNION PACIFIC RAILROAD COMPANY
BY THE WAR DEPARTMENT.

LETTER

FROM

THE SECRETARY OF WAR,

TRANSMITTING

*A statement of the amounts paid to the Union Pacific Railroad Company
since June 30, 1866.*

FEBRUARY 8, 1873.—Referred to the Select Committee on the Credit Mobilier (No. 2)
and ordered to printed.

WAR DEPARTMENT, *January 31, 1873.*

The Secretary of War has the honor to transmit to the House of Representatives, in compliance with the resolution of the 20th instant, the accompanying report of the Quartermaster-General, showing the amount paid to the Union Pacific Railroad Company for transportation in each fiscal year since June 30, 1866, with an estimate of what said transportation would have cost if said railroad had not been constructed.

WM. W. BELKNAP,
Secretary of War.

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., January 28, 1873.

To the honorable the Secretary of War :

SIR: I have the honor to return herewith the resolution of the House of Representatives, (on motion of Mr. Palmer, January 20th, instant,) requesting a statement of amounts paid to the Union Pacific Railroad for transportation in each fiscal year since June 30, 1866, with an estimate of the amount said transportation would have cost if said railroad had not been constructed.

In reply I have to submit herewith the inclosed statement, showing the amounts paid by the Government for transportation of troops and supplies in each year, as required by the resolution.

The total yearly payments were as follows :

	Troops.	Baggage and supplies.
1866-'67	\$73,312 03	\$38,135 43
1867-'68	191,389 15	780,355 12
1868-'69	106,130 77	372,365 02
1869-'70	300,722 30	187,529 70
1870-'71	396,113 07	304,670 76
1871-'72	273,741 98	204,431 44
1872, to January 28, 1873	104,852 95	15,498 33
Totals	<u>1,446,262 25</u>	<u>1,902,985 80</u>

In addition to the above the following amounts have been paid for expressage on paymasters' funds and for transmission of telegrams :

	Expressage.	Telegrams
1866-'67		\$7 97
1867-'68		831 51
1868-'69		1,185 81
1869-'70		361 10
1870-'71	\$1,988 43	4,415 77
1871-'72	2,599 85	1,302 81
1872, to January 28, 1873	932 35	82 86
Totals	<u>5,520 63</u>	<u>8,187 83</u>

These amounts, added to the cost for movement of troops, supplies, and baggage, make a sum-total earned on all business for this Department, during the period required, of \$3,362,956.51, one-half of which has been paid in cash, and the other half credited to the company as required by section 5 of the act of July 2, 1864, (less \$11,916.86, losses on United States property.)

The average rates per mile for troops are, on through business, $5\frac{2}{10}$ cents; on local business, 8 cents, being an average of $6\frac{3}{5}$ cents per man per mile.] The average rates per mile for troops by the Overland Stage Company were, on through business, $12\frac{1}{2}$ cents; on local business, 15 cents, being an average of $13\frac{3}{4}$ cents per mile per man.

Assuming that all of these troops would have traveled by stage, in the absence of the railroad, (which is by no means probable,) the total estimated cost by stage is shown by the following, based on the averaged rates above stated:

Average rate per man per mile: rail	$6\frac{3}{5}$ cents.
Average rate per man per mile: stage	$13\frac{3}{4}$ cents.
Actual cost for troops at railroad rates	\$1,446,262.25
Estimated cost at stage rates	\$3,013,046.35

The average rates per 100 pounds per 100 miles charged for freight by the railroad during the period required are, on through business, 19 cents; on local business, 62 cents, being an average of $40\frac{1}{2}$ cents per 100 pounds per 100 miles by railroad.

Previous to the existence of the Union Pacific Railroad, military supplies were transported by wagon, under contract, over what was known as route No. 1, [from the Missouri River, north of and including Fort Leavenworth, and south of latitude 40° north, to all posts and depots in the Territory of Colorado north of latitude 40° north, and in the Territories of Nebraska, Dakota, Idaho, Montana, and Utah south of latitude 44° north and east of longitude 114° west of Greenwich;] the yearly rates on this route until superseded by the railroad, and thereafter on the contiguous route No. 2, [from Forts Leavenworth and Riley, and from Kansas City, to posts in Kansas and Colorado Territory south of latitude 40° north, and to posts in New Mexico,] were as follows, as shown by the

contracts for those routes, viz: 1866, \$1.45; 1867, \$1.64; 1868, \$1.99; 1869, \$1.55; 1870, \$1.18; 1871, \$1.21; 1872, \$1.17½, being an average of about \$1.46 per hundred pounds per hundred miles.

At this average rate the estimated cost of the transportation of the freight moved by the Union Pacific Railroad, including express charges as shown above, during the time commencing July, 1866, and ending January 28, 1873, would be as follows:

Rates per 100 pounds per 100 miles: railroad rates.....	40½ cents.
Rates per 100 pounds per 100 miles: wagon rates.....	\$1 46
Actual cost of freight at railroad rates.....	\$1, 896, 589 57
Estimated cost at wagon rates.....	\$6, 837, 088.32
Showing a total estimated cost for moving the troops and supplies by stage and wagon of.....	\$9, 850, 134 67
Total actual cost by railroad.....	3, 342, 851 82
Estimated difference.....	6, 507, 282 85

equivalent to about 66 per cent.

I am, very respectfully, your obedient servant,

M. C. MEIGS,

Quartermaster-General, Brevet Major-General, U. S. A.

UNION PACIFIC RAILROAD COMPANY.

Statement of transportation, express, and telegraphic service performed, showing the amount of money paid for the same by the Government from appropriations for the Army, in each fiscal year since 1866, to the Union Pacific Railroad Company.

QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., January 29, 1873.

Official:

M. I. LUDINGTON, Quartermaster, U. S. A.

a To January 28. b One-half cash, one-half credited on bonds, but all taken from appropriations for Quartermaster's Department.

FAILURE OF MERCHANTS' NATIONAL BANK, D. C.

LETTER

FROM THE

COMPTROLLER OF THE CURRENCY,

TRANSMITTING

Copies of all papers on file in his office relating to the failure of the Merchants' National Bank of the District of Columbia; also correspondence relating to certain bonds deposited in said bank by Joseph B. Stewart prior to its failure.

FEBRUARY 8, 1873.—Referred to the Select Committee on Credit Mobilier (No. 2) and ordered to be printed.

TREASURY DEPARTMENT,
OFFICE OF COMPTROLLER OF THE CURRENCY,
Washington, February 1, 1873.

SIR: I have the honor to acknowledge the receipt of a resolution of the 30th ultimo, "requesting the Comptroller of the Currency to communicate to this House copies of all papers on file in his office relating to the failure of the Merchants' National Bank of Washington, D. C., together with copies of all correspondence with the Ocean National Bank of New York as to the ownership of certain Pacific Railroad bonds deposited in said Merchants' National Bank by Joseph B. Stewart prior to its failure."

The report of the national-bank examiner, made to this office on the 11th day of May, 1866, exhibiting the condition of the Merchants' National Bank of Washington immediately after its suspension is not among the files of this office. A resolution of the House of Representatives of the 8th day of May, 1866, directed the Committee on Banking and Currency "to examine into all the facts and circumstances connected with the recent failure of the Merchants' National Bank of Washington, and report to the House the amount of money deposited in the said bank, and by whom, the causes of its failure, and also what further legislation is necessary in regard to the national banks to protect the public and the Government, and that the said committee be empowered to send for persons and papers, and examine witnesses under oath;" and it is supposed that all the papers then on file in this office relating to the failure of this bank were placed in the hands of that committee, in accordance with the terms of the resolution. The receiver of the Merchants' National

Bank, who was appointed May 8, 1866, informs me that there were no Union Pacific Railroad bonds among the assets at the time he took possession of the bank; neither was there any account or memorandum on the books or papers to indicate that the bank had ever held Union Pacific bonds, although it was reported that Mr. Joseph B. Stewart had deposited bonds of this kind in the hands of Mr. Leonard Huyck individually, who was then president of the bank.

There is no correspondence on file in this office with the Ocean National Bank of New York in reference to the ownership of the Pacific Railroad bonds referred to in the resolution.

I am, very respectfully, your obedient servant,

JNO. JAY KNOX,
Comptroller.

Hon. JAMES G. BLAINE,
Speaker of the House of Representatives.

BUILDING FOR BUREAU OF ENGRAVING AND PRINTING.

LETTER

FROM

THE SECRETARY OF THE TREASURY,

TRANSMITTING

An estimate of the cost of a suitable building for the use of the Bureau of Engraving and Printing, and the storage of the books and papers of his Department.

FEBRUARY 8, 1873.—Referred to the Committee on Public Buildings and Grounds and ordered to be printed.

TREASURY DEPARTMENT,
Office of the Secretary, February 6, 1873.

SIR: I have the honor to transmit herewith an estimate, prepared by the Supervising Architect of the Treasury, of the cost of a suitable building for the use of the Bureau of Engraving and Printing, and the storage of the books and papers of this Department, in conformity to the recommendation made by me upon that subject in my last annual report.

Very respectfully,

GEO. S. BOUTWELL,
Secretary.

Hon. JAMES G. BLAINE,
Speaker House of Representatives.

TREASURY DEPARTMENT,
Office of Supervising Architect, February 4, 1873.

SIR: According to instructions I have prepared a careful estimate of the cost of a building for the accommodation of the Bureau of Engraving and Printing and for the files of the Department. I recommend the erection of a building 250 feet in length, 72 feet 6 inches in width, four stories in height, with a basement, the basement story to be built with ranged rubble-work and a superstructure of hard brick; the main front to be faced with pressed brick; the building to be entirely plain, without any ornamentation, and to be thoroughly fire-proof in character and provided with fire-proof shutters; the staircases to be of iron, and the

ceilings and rooms occupied by the offices only to be plastered. I have estimated for nothing of an ornamental character, but have confined myself strictly to the constructive requirements, and the necessities of a fire-proof structure. The cost of such a building I estimate at \$421,607; and the machinery, including elevators, I estimate at \$40,000 additional. It appears to me a matter of importance that the bonds, notes, and other securities, produced in the new building, should not be transmitted to the Department through the streets, and believe that it should be connected with it by a sub-way, which is perfectly feasible, and the cost of which is estimated at \$35,674, making a total of \$497,281.

The amount of space at present occupied by the Printing Department is 62,743 feet of floor space, but many branches of the Printing Department are overcrowded, and it is probable that the Printing Department would require not less than 70,000 feet, for the new building, which would leave but 11,000 feet for the files and records of the Department, which is as small an amount of space as can be properly assigned to their use for the present. I am of the opinion that it is not possible to provide accommodations for the purposes specified in your annual report, if the size of the building is reduced, and I therefore recommend that an appropriation of not less than \$500,000 be obtained for the erection of the building, furnishing the machinery, and the further construction of the sub-way.

Very respectfully,

A. B. MULLETT,
Supervising Architect.

Hon. GEO. S. BOUTWELL,
Secretary of the Treasury.

DEFICIENCY IN APPROPRIATION, MEDICAL DEPARTMENT.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

A deficiency for the Medical Department for the fiscal year ended June 30, 1872.

FEBRUARY 8, 1873.—Referred to the Committee on Appropriations and ordered to be printed.

WAR DEPARTMENT,
Washington City, February 3, 1873.

SIR: I respectfully request that the accompanying deficiency estimate for the Medical Department, for the fiscal year ended June 30, 1872, may be submitted to the House of Representatives as early as possible.

The delay in transmitting this estimate arises from the fact that the balance on hand to the credit of the appropriation was considered sufficient to meet all demands against it; but a number of claims have been presented recently, exhausting said balance and necessitating a deficiency appropriation.

Very respectfully, your obedient servant,

WM. W. BELKNAP,
Secretary of War.

The SPEAKER of the House of Representatives.

Estimate of appropriation required for the service of the fiscal year ended June 30, 1872, by the Medical Department of the Army, to supply deficiencies in appropriations for that year.

To pay bills for medical attendance and medicines furnished by citizens to officers and men on detached service, such bills not having been presented until after the close of the fiscal year. (Appropriated, Stat. at L., vol. xvi, p. 523, sec. 1)..... \$8,000

J. K. BARNES,
Surgeon-General, United States Army.

CLERKS IN TREASURY DEPARTMENT APPOINTED IN 1872.

LETTER

FROM

THE SECRETARY OF THE TREASURY,

TRANSMITTING

A list of clerks and employes now in his Department who were appointed for duty in the city of Washington during the year 1872.

FEBRUARY 8, 1873.—Referred to the Committee on Civil Service and ordered to be printed.

TREASURY DEPARTMENT, *February 4, 1873.*

SIR: In compliance with a resolution of the House of Representatives passed January 18, 1873, I have the honor to transmit herewith a list of clerks and employes now in this Department who were appointed for duty in the city of Washington during the year 1872.

I am, very respectfully,

GEO. S. BOUTWELL,
Secretary.

Hon. JAS. G. BLAINE,
Speaker of the House of Representatives.

Clerks and employes now in the Treasury Department who were appointed for duty in the city of Washington, D. C., during the year 1872, as called for by a resolution of the House of Representatives passed January 18, 1873.

CLERKS EMPLOYED IN ATTORNEY-GENERAL'S DEPARTMENT.

LETTER

FROM

THE ATTORNEY-GENERAL,

RELATIVE TO

The number of clerks and employés in his Department during the year 1872.

FEBRUARY 8, 1873.—Referred to the Committee on the Re-organization of the Civil Service of the Government and ordered to be printed.

DEPARTMENT OF JUSTICE,
Washington, February 3, 1873.

SIR: I have the honor to acknowledge the receipt of a resolution of the House of Representatives, dated the 8th ultimo, in the following words:

Resolved, That the Secretaries of State, Treasury, Interior, War, and Navy, and the Attorney-General and Postmaster-General, be requested to inform this House how many clerks and employés in their respective Departments have been appointed for employment in the city of Washington during the year 1872; and also to furnish the names of said appointees, and the States from whence appointed. They are further requested to designate those who were appointed under the civil-service rules.

In compliance with this resolution, I submit the following statement of the clerks and employés appointed by this Department for employment in this city during the year 1872:

Henry O'Connor, appointed February 9, 1872, as examiner of claims in the Department of State. The appointments to this office are not included in the operation of the civil-service rules.

W. C. Tripler, appointed January 15, 1872, as translator for the Mexican claims commission, at a salary of \$1,500 per annum.

George C. Wing, of Ohio, appointed March 8, 1872, to a temporary clerkship in the office of the Solicitor of the Treasury.

Palmer Tilton, of the District of Columbia, appointed March 16, 1872, to a temporary clerkship in the office of the Solicitor of the Treasury.

C. A. Vedder, of the District of Columbia, appointed April 10, 1872, to a temporary clerkship in the office of the Attorney-General; since removed.

R. W. Spain, of Nebraska, and William Lane, of Maryland, appointed July 1, 1872, as watchmen in this Department.

2 CLERKS EMPLOYED IN ATTORNEY-GENERAL'S DEPARTMENT.

Charles Bull, of South Carolina, appointed July 3, 1872, to a temporary clerkship in the office of the Attorney-General.

George Wainscott, of Kentucky, appointed October 14, 1872, to a temporary clerkship in the office of the Attorney-General.

The appointment of examiner of claims being exempt from the operation of the civil-service rules, and the other appointments being merely temporary, no occasion has arisen for the application of those rules.

Very respectfully,

GEO. H. WILLIAMS,
Attorney-General.

Hon. JAMES G. BLAINE,
Speaker of the House of Representatives.

UTAH INDIAN WAR CLAIMS.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

*The claim of the Territory of Utah for Indian war expenses of the years
1865, 1866, and 1867.*

FEBRUARY 8, 1873.—Referred to the Committee on Indian Affairs and ordered to be
printed.

WAR DEPARTMENT,
February 6, 1873.

The Secretary of War has the honor to report to the House of Representatives, for the information of the Committee on Military Affairs, in reply to the request of said committee of the 28th ultimo, for information in regard to the claim of the Territory of Utah for Indian war expenses of the years 1865, 1866, and 1867, that the only record of this class of troops is embraced in a letter of Hon. J. M. Ashley, dated May 3, 1865, introducing one S. T. Hauser, the bearer of a letter from the governor of Utah, who desired to raise one or more regiments of mounted men for defense against the Indians.

The request of Mr. Hauser for authority to raise the organizations referred to does not appear to have been granted, the letter of introduction, brought by him with other papers, having been filed without action.

It appears, however, that troops were raised by the governor of Utah, inasmuch as, February 9, 1869, the adjutant-general of Utah forwarded a statement of expenses incurred by the Territory in its defense. The statement was received at the War Department March 25, 1869, and transmitted to the House of Representatives the same date. Nothing further appears on the records of this Department. There may be papers in the claim in the office of the Third Auditor of the Treasury.

WM. W. BELKNAP,
Secretary of War.

MISSISSIPPI CHIPPEWA INDIANS.

LETTER

FROM

THE SECRETARY OF THE INTERIOR,

RELATIVE TO

*An appropriation for the relief of the Mississippi Chippewa Indians on the
White Earth reservation.*

FEBRUARY 8, 1873.—Referred to the Committee on Appropriations and ordered to be printed.

DEPARTMENT OF THE INTERIOR,
Washington, D. C., January 30, 1873.

SIR: I have the honor to inclose herewith, first, two letters, dated January 6, 1872, addressed to the Commissioner of Indian Affairs by the chiefs of the Mississippi Chippewas on the White Earth reservation; secondly, two letters, dated the 27th instant, addressed to the Secretary of the Interior by the Right Rev. H. B. Whipple, of the Episcopal Church, who has, for a long time, taken a deep interest in the protection and welfare of these Indians.

The destitute condition of these Indians, disclosed by the papers herewith, calls for prompt action and immediate relief. It is needless to call the attention of Congress to the necessity for such action and relief in any other terms than those contained in these letters.

I beg, therefore, to recommend, first, an appropriation of \$25,000 for immediate use, in preventing starvation and other suffering by this tribe of Indians; and, secondly, the passage of a law authorizing these Indians to sell a township of land to the United States for the sole use of the Pembina Chippewas, (the subject of which was embraced in a letter addressed by this Department to the Speaker of the House on the 13th instant,) and from the proceeds of such sale to re-imburse the Government for the \$25,000 to be immediately appropriated. I cannot too earnestly direct the attention of Congress to the necessity for the immediate passage of the two propositions herein indicated, or some equivalent therefor.

This communication I have forwarded to the House by the hand of

Agent E. P. Smith, in charge of these Chippewas, who will be able to give the Committee on Appropriations, or any other committee to whom this letter may be referred, any other information which may be required upon this subject.

The papers, herewith inclosed, having been referred to the Acting Commissioner of Indian Affairs for his views, I now transmit a copy of his report dated to-day, in which he urges the same measures as have been previously indicated in this letter.

Very respectfully, your obedient servant,

C. DELANO,
Secretary.

The Hon. the SPEAKER of the House of Representatives.

WHITE EARTH, MINNESOTA, *January 6, 1873.*

SIRS: We feel that we are going to pass a hard winter, and many will begin their suffering in a few days. Our supply of provisions which we gathered last fall by fishing and hunting, and making rice, is very near exhausted, and when that is gone, what are we to do? We asked our agent in council the other day if he could help us any in the way of provision; he told us he could not, and had no work for us to do, and no means in his hands to assist us in any way except by a surplus of annuity-money from last fall's payment, which would amount probably to \$1 per head, and which we would get toward spring; if we had that dollar now, it is not supposed we could live two or three months on it; a white man may probably get along with it, but an Indian could not. What are we to do? Our agent cannot help us, and the traders cannot feed us for nothing; they have given us a great deal on credit, and as soon as they stop doing so, we shall have nothing to depend upon. To whom, then, shall we look upon for relief but to you who may have pity on us in our present condition? If this starvation which is staring us was caused by laziness or mismanagement of domestic affairs, we would be ashamed to ask for aid after so much has been done by your religious societies. You are, I suppose, aware that our crops were entirely destroyed by the grasshoppers in the month of July last, and we have no means in advance like the white man whom we are trying to imitate. We fear we shall be obliged to turn heathen again, as far as our provisions are concerned, for a short time, for it is not expected that any person will let his children suffer when he has a yoke of oxen in his possession; although we know we will do wrong in killing them, as it will enable us to do our planting next spring, and we are certain our agent will not give any more. No one knows the extent of suffering there will be, and when known in full it may be too late for some of us. Some of our good people on this reservation do not believe there will be much suffering; no one will believe when he himself will sit at his table full of luxuries, but let some of our Christian friends go round to our huts and see what we eat, how much we have to eat, and they may be able to pass their opinion more correctly on us.

We remain, yours, friends and brothers,

WAUB-AUN-AU-QUOD. +
ME-SHA-KE-KI-SHICK. +
MEN-E-DO-WAU-BE. +
NAY-BAN-A-SKUNG. +

In presence of—

C. H. BEAULIEU.

J. J. ENMEGAHBOOH.

The INDIAN COMMISSIONERS.

WHITE EARTH, MINNESOTA, *January 6, 1873.*

SIR: In a council we had with our agent, Major E. P. Smith, he asked us if we would permit the Chippewas of Pembina to come on our reservation. We have talked the matter over with other chiefs of our band, and we feel sorry for our friends and relatives who reserved no homes when they ceded their land to their Great Father. They are now like birds flying from tree to tree, but finding no spot they can call their permanent homes.

If the Chippewas of Mississippi were as rich in lands as they used to be in former times, we would willingly invite them to come and make their homes with us, without recompense; but we are too poor, for many of us, as well as other new-comers, have but a little to start with to commence a new mode of life, and many have nothing at all with which they would be enabled to help them; neither do we see anything to continue this way of living which our Great Father has laid out for us, unless it is by the generosity of Congress, which has not forsaken us up to the present time, and may again extend a helping hand, which might be used for the other Mississippi bands which expect to join us next summer. We have, therefore, agreed that we will sell a certain tract of land on this reservation to our Great Father, which our agent and the chiefs shall designate hereafter, for a home for the Pembina Indians, or any other Chippewas, (but for no other tribe or nation,) and the money which our Great Father will give us be used as our agent and the chiefs may agree upon in council, for the benefit of the Chippewas of Mississippi on this reservation, who have made their homes here at the present time.

Respectfully, yours,

WAUB-AUN-AN-QUOD, his x mark,
Chief.
 MSHA-KE-KE-SHICK, his x mark,
Chief.
 MEN-E-DO-WUBE, his x mark,
Chief.
 NAY-BUN-A-SKUNG, his x mark,
Chief.

In presence of—

C. H. BEAULIEU,
 J. J. EMMIGABAUH.

The Hon. COMMISSIONER OF INDIAN AFFAIRS,
Washington, D. C.

ROME, NEW YORK, *January 27, 1873.*

MY DEAR SIR: Inclosed I send you a letter of the chiefs of the White Earth Indians. If the proposal was to sell any portion of this reservation to whites, I would oppose it. These Indians have sold us land worth millions, and they have been robbed as few Indians ever have been. This reservation ought to be the home of all of the Chippewas, and if by the sale of any part of this for others to come, or by appropriations, this end can be carried out, I believe great good could be done. I am sure you will do all you can for these people, only I beg of you to set your face as a flint against the sale of one foot of this reservation to whites. The Indians would only get a pittance, and Ahab repeat the robbery of Naboth.

God bless you and reward you for all your heroic efforts for this helpless race. Does not Christ our King look down and see all such blessed work? And will not He repay it?

Your friend,

H. B. WHIPPLE.

Hon. Mr. DELANO,
Secretary of the Interior.

POST-OFFICE, FARIBAULT, MINNESOTA,
January 27, 1873.

MY DEAR FRIEND: The letter which I mark No. 2 tells its own sad story. These men are our friends. They have always been true to their plighted faith. They are now living as white men. They are Christians. It will be an awful blot on the nation if they are allowed to starve. They had planted large crops, and early in June these crops looked well, and every heart was glad.

In July there came a grasshopper plague, which destroyed every vestige of their labor. They did the best they could to gather rice and fish, but now starvation stares them in the face. You must aid them. If their agent is in Washington please show him this letter. I have no means, or I would at once provide for them. The letter only reached me to-day, on account of our severe storm. I have telegraphed one of my clergy to buy five hundred dollars' worth of provisions, for which I will be responsible.

Assuring you of my deep gratitude for all your efforts for this poor race,

I am your friend,

H. B. WHIPPLE.

Hon. SECRETARY OF THE INTERIOR.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, D. C., January 30, 1873.

SIR: I have the honor to return, herewith, the letters of Rev. H. B. Whipple, of January 27, 1873, with inclosures, this day referred to this Office by the Department, relative to the destitute condition of the Chippewas on the White Earth reservation, and would respectfully recommend that Congress be asked to appropriate \$25,000 for their relief.

In this connection I would respectfully invite attention to the matter of the sale, by said Indians, of a township of their land, which was submitted to Congress with letter of the Department of 13th instant. Should such sale be authorized, the \$25,000 could be re-imbursed to the Government from the proceeds of such sale.

Very respectfully, your obedient servant,

H. R. CLUM,
Acting Commissioner.

Hon. C. DELANO,
Secretary of the Interior.

SITE OF FORT HOUSTON, NASHVILLE, TENNESSEE.

LETTER

FROM

THE SECRETARY OF WAR,

TRANSMITTING

A draught of a bill to confirm the purchase of a portion of the site of Fort Houston, at Nashville, Tennessee, and to provide for the sale of the same; also to confirm the purchase of certain land at Fort Hamilton, New York.

FEBRUARY 8, 1873.—Referred to the Committee on Military Affairs and ordered to be printed.

WAR DEPARTMENT, *February 6, 1873.*

The Secretary of War has the honor to transmit to the House of Representatives a draught of an act to confirm the purchase, on the 25th of August, 1865, of a portion of the site of Fort Houston, at Nashville, Tennessee, and to provide for the sale of the same, the land being no longer necessary for military purposes; also to confirm the purchase, on the 9th September, 1862, of certain land at Fort Hamilton, New York, upon which batteries are now erected.

The passage of this act at the present session of Congress is respectfully recommended, in order that the officer by whom the property referred to was purchased may be relieved from further accountability, the expenditures having been disallowed by the Third Auditor of the Treasury on settlement of his accounts, and he informed that he must apply to Congress for relief.

WM. W. BELKNAP,
Secretary of War.

AN ACT to confirm the purchase of a portion of the site of Fort Houston, at Nashville, Tennessee, and to provide for the sale of the same; also to confirm the purchase of certain land at Fort Hamilton, New York.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the purchase by the United States on the 21st day of August, 1865, from Russell Houston, of certain land consisting of about three and one-quarter acres, situate in the city

of Nashville, Tennessee, with the buildings thereon standing, and being the same premises described in a deed of said date from said Houston to the Chief Engineer of the Army in trust for the United States, recorded in Book 35, page 241, in the register's office of Davidson County, Tennessee, be and the same hereby is ratified, sanctioned, and confirmed, so that the said purchase, and the said deed thereupon executed, shall have the same legal validity and effect as if the same had been by a previous act of Congress specifically authorized.

SEC. 2. *And be it further enacted*, That the Secretary of War be, and he hereby is, authorized to sell at public auction to the highest bidder, either in entirety or in portions, and after thirty days' notice in two daily newspapers published in the city of Nashville, the land described in the preceding section; the same having lately formed a portion of the site of Fort Houston, and having become no longer necessary for military purposes; and that the proceeds of such sale shall be paid into the Treasury of the United States.

SEC. 3. *And be it further enacted*, That the purchase, by order of the Executive Department, under an authority supposed to be conferred by the act of February 20, 1862, making appropriations for the construction, &c., of certain fortifications, &c., of certain land at Fort Hamilton, New York, consisting of about twenty-one acres, as a site for additional batteries, and conveyed to the United States by deed of Julia Delaplaine of September 9, 1862, which said deed has been pronounced by the Attorney-General, by opinion of November 22, 1862, to vest a good and valid title in the United States, and upon which said land the said batteries have been duly constructed, be, and the same hereby is, confirmed.

FORT SANDERS MILITARY RESERVATION.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The reduction of the Fort Sanders military reservation.

FEBRUARY 8, 1873.—Referred to the Committee on Military Affairs and ordered to be printed.

WAR DEPARTMENT, *February 5, 1873.*

The Secretary of War has the honor to transmit to the House of Representatives, for the information of the Committee on Military Affairs, a copy of the report of the Adjutant-General of the Army relative to a reduction of the Fort Sanders military reservation.

WM. W. BELKNAP,
Secretary of War.

Report relative to a proposed reduction of the Fort Sanders military reservation, Wyoming Territory.

An enlargement of this reservation was declared by the President June 28, 1869, and the reserve, at present, contains an area of eighty-one square miles—nine miles square. Its limits embrace the site of the town of Laramie, and also the territorial penitentiary grounds, permission for the location of the latter having been granted at request of the Interior Department.

In December, 1871, the House Committee on Military Affairs referred to the War Department draught of a bill for a reduction of the reserve, and reference being made to General Sheridan, he expressed the opinion that a reservation of four square miles would be sufficient for the post, and it seems a report in accordance with this view was made by the War Department to the House Committee, and that accordingly an act (H. R. 161) passed the House March 1, 1872, (which was read twice in the Senate and referred to the Committee on Military Affairs,) reducing the reserve to four square miles, and designating the boundaries as reduced. *It does not appear that this bill has yet become a law.*

January 1, 1873, the post commander (evidently in answer to a com-

munication from division headquarters on the subject) states that he has had the reservation carefully examined, with a view to its reduction, and has concluded that it is essential to retain only such of the reservation as will be absolutely necessary to furnish hay and wood, and a supply of water for the post. He incloses a plat showing the present bounds of the reserve, and indicates in red lines a proposed reduction, which he states will diminish the reservation about one-half, and yet secure the land needed for the post, while at the same time it will do no injustice to settlers. He mentions a Mr. Davidson as having within a few months settled on hay-ground actually required for the post. From the plat forwarded it appears that Mr. Davidson and two or three others have ranches partially within the proposed reduced limits.

The post commander further says that it will be necessary to reserve, in addition, the whole of what is known as the Government Cañon, in order to supply the necessary wood. Referring to the House bill making a reduction, he remarks that should the same become a law, with boundaries given in the bill, the post would be without a particle of wood, water, or hay, and he thinks it would be better to break up the post immediately.

The department commander approves of a reduction, as indicated by the post commander, and requests that legislation to that end be asked. Approved by division commander and by the General of the Army.

The change recommended appears to exclude Laramie City and the penitentiary grounds, and to embrace the tract known as the Government Cañon, which latter does not seem to have been included in reservations heretofore declared. This would, therefore, require an executive order for its reservation, while the proposed reduction of the post reserve can only be made with the sanction of Congress.

E. D. TOWNSEND,
Adjutant-General.

○

MILITARY TELEGRAPH LINE IN TEXAS.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The establishment of a military telegraph line in Texas.

FEBRUARY 8, 1873.—Referred to the Committee on Military Affairs and ordered to be printed.

WAR DEPARTMENT, *February 6, 1873.*

The Secretary of War has the honor to transmit to the House of Representatives, for the information of the Committee on Military Affairs, the inclosed copy of a telegram from Brigadier-General C. C. Augur, urging the establishment of a military telegraph line in Texas.

WM. W. BELKNAP,
Secretary of War.

[The Western Union Telegraph Company. Dated San Antonio, Texas, January, 29, 1873.]

To General W. T. SHERMAN :

Will you do what you can to have telegraph established to our posts here? General Sheridan will report strongly in favor, being important.

C. C. AUGUR,
Brigadier-General.

HEADQUARTERS OF THE ARMY,
Washington, D. C., January 31, 1873.

Official copy, respectfully submitted for the information of the Hon. Secretary of War.

W. T. SHERMAN,
General.

[Indorsement.]

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, February 1, 1873.

Respectfully submitted to the Secretary of War.

E. D. TOWNSEND,
Adjutant-General.

ROAD FROM SANTA FÉ TO TAOS.

LETTER

FROM

THE SECRETARY OF WAR,

RELATIVE TO

The proposed road from Santa Fé to Taos, in the Territory of New Mexico.

FEBRUARY 8, 1873.—Referred to the Committee on Military Affairs and ordered to be printed, to accompany bill H. R. 2747.

WAR DEPARTMENT, *February 6, 1873.*

The Secretary of War has the honor to report to the House of Representatives, for the information of the Committee on Military Affairs, that the proposed road (bill H. R. 2747) from Santa Fé to Taos, in the Territory of New Mexico, it is believed, will be of advantage to the United States in the improved communication between Santa Fé (the headquarters of the military forces in New Mexico) and Fort Garland, via the large town of Taos.

This road would be the one traveled by paymasters and other officers and troops, and used in transportation of supplies between Santa Fé and Fort Garland, instead of the very rough road and trails which must now be passed over. (See chap. 79, vol. 10, Stat., page 303.)

WM. M. BELKNAP,
Secretary of War.

THE RECORD OF THE

COTTON-TAX.

L E T T E R

FROM

THE SECRETARY OF THE TREASURY,

RELATIVE TO

The propriety of refunding the cotton-tax.

FEBRUARY 8, 1873.—Referred to the Committee of Ways and Means and ordered to be printed.

TREASURY DEPARTMENT,
Office of the Secretary, February 4, 1873.

SIR: As required by a resolution of the House of Representatives of the 1st instant, I have the honor to transmit to the House an argument in writing, prepared in the Office of the Commissioner of Internal Revenue, by Mr. Israel Kimball, in relation to the propriety of refunding the cotton-tax.

Very respectfully,

GEO. S. BOUTWELL,
Secretary.

Hon. JAMES G. BLAINE,
Speaker House of Representatives.

OUGHT THE TAX COLLECTED ON RAW COTTON UNDER
THE INTERNAL-REVENUE LAW TO BE REFUNDED?

As this question is being very generally discussed throughout the country, in the public journals and in the halls of Congress, and inasmuch as the question is one of personal interest to every tax-payer in the country, involving the payment from the United States Treasury of nearly seventy millions of dollars, every one is interested to know on what grounds such a claim is made. We are told in the newspapers that the southern members of Congress of both parties have, to a man, declared in favor of the refunding of this tax; that they have submitted a memorial, numerous signed and addressed personally to each member of the House of Representatives, accompanied with memorials from State legislatures and arguments of distinguished counsel, in which the correctness and propriety of refunding to the citizens of the cotton States

the tax collected by the general Government on raw cotton, is demonstrated.

The ground on which the advocates of this measure base their claim is, that the tax was unconstitutional:

1. Because not uniform; and,
2. Because it was a tax levied upon exports.

Again, it is claimed that the tax was unequal and oppressive in its operations:

1. Because it fell entirely upon producers;
2. Because it was imposed without the consent of the southern people, and when they were wholly unrepresented; and,
3. Because the producers of cotton paid the same taxes that all other citizens paid, and the extra cotton-tax levied on no others.

I propose to examine these several points in the order named above, and to show as well as I can the fallacy of the reasons urged in favor of refunding the cotton-tax, and why the Government ought not to refund it.

Under the Constitution of the United States the first of the legislative powers conferred on Congress relates to the laying and collecting of taxes. The first clause of the eighth section of the first article is in these words:

Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States.

No limit can be found in this clause to the objects and sources of taxation. In this respect the power granted to Congress is general. It may lay and collect taxes on lands and other real estate, and on polls, which are known under the head of direct taxes. It may lay them on articles which enter into consumption, and of which each person pays only so much as he consumes of such articles. It may lay impost taxes or duties, making the same uniform on all imports, or discriminating as to particular articles. It may levy excise taxes, having the choice to impose them on agricultural products, or products of the mines, or manufactures. In its choice of objects to be made the subjects of taxation no limit is imposed by the section I have quoted upon the power of Congress. To any extent demanded by the exigencies of the Government, for the purposes specified, viz, to pay the public debt, to provide for the common defense and general welfare of the United States, Congress has power to levy and collect taxes, duties, imposts, and excises.

The absolute necessity of this power of taxation conferred by the fundamental law of the nation on its legislature seems to be a proposition too plain to require argument. In the language of Judge Story, "if there is to be an effective National Government, there must be a power of taxation given to it adequate to its wants, its objects, and its duties."

On the 1st day of July, 1862, Congress passed an act entitled "An act to provide internal revenue to support the Government and to pay interest on the public debt." At that time eleven States of the Union, including all of the so-called cotton States, were in insurrection and rebellion, and carrying on war against the United States. To put down this rebellion, to restore the Union, to re-establish justice and tranquility, and to perpetuate the blessings of civil liberty, Congress had, in the exercise of other powers conferred upon it by the Constitution, viz, the power "to raise and support armies," "to provide and maintain a navy," and "to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions," called out,

armed, and equipped large land and naval forces. To provide for these forces and to maintain them in the field internal taxation had to be resorted to. To meet these expenses of the Government, the receipts from the ordinary sources of taxation, viz, from imposts, proved to be but as a drop in the bucket. To borrow money on the credit of the United States, though legitimate and within the delegated powers of Congress, was a resource entirely inadequate to meet the pressing exigencies of the times. The credit of the Government at that crisis was too low to warrant even an attempt to borrow money from foreign capitalists. Loans could be obtained only from our own people, the payment of which must be guaranteed by increased taxation.

Under this pressure of circumstances, after months of painful anxiety, during which, in Congress and out of Congress, the subject was discussed until it had been nearly exhausted, Congress passed the internal-revenue law before alluded to. That law, with those which were subsequently passed, including the act of March 3, 1863, of June 30, 1864, and March 3, 1865, seem to have completely exhausted the sources of taxation. Nearly all trades, occupations, and professions, and the incomes, profits, and gains derived therefrom, were made to contribute their proportion to the United States Treasury. Tax-gatherers were sent into every nook and corner of the country where the civil authority of the United States was not obstructed by reason of the before-mentioned insurrection and rebellion, to collect the taxes which Congress had levied on its industries. The duties on all foreign importations were largely increased to correspond with internal taxes. All goods, wares, and merchandise, the products of our home manufactures, were taxed. The products of our forests and of our fisheries, of our mines, of agriculture, all were made objects or sources of taxation, if not in their crude state, at their first remove from such state by any process of preparation or manufacture. For instance, a tax was imposed on all coal mined; on crude petroleum; on waters from springs impregnated with minerals, when put up and sold in bottles; on slaughtered animals; on fruits and vegetables preserved; on meats, fish, and shell-fish in air-tight packages; on all oils, animal or vegetable, with few exceptions; on salt; on turpentine; on building-stone when hewn; on copper, lead, and iron in pigs; on quicksilver; on diamonds, emeralds, and precious stones; on bullion, whether gold or silver, in lumps, ingots, or bars; on manufactured lumber; on tanned skins, not excepting goat, calf, kid, sheep, horse, hog, or dog; and on all manufactures, whether of cotton, silk, worsted, hemp, India rubber, gutta-percha, wood, leather, paper, iron, steel, lead, tin, copper, zinc, brass, gold, silver, horn, ivory, bone, bristles, wholly or in part, or of other materials. In fact, so general was taxation, either specifically and under special enumeration, or by a comprehensive and general clause, that taxation was looked upon by the revenue-officers as the rule, and exemptions the exceptions; and these exceptions were so limited that a list could almost be made of them on one's finger-ends.

To this general and almost universal rule of taxation it was not thought expedient to make cotton, which had been claimed and proclaimed to be the king of products, an exception. The act of July 1, 1862, imposed a tax of one-half of one cent per pound on cotton. The language of the statute reads as follows:

On and after the 1st day of October, 1862, there shall be levied, collected, and paid a tax of one-half of one cent per pound on all cotton held or owned by any person or persons, corporation, or association of persons; and such tax shall be a lien thereon in the possession of any person whomsoever.

The act of June 30, 1864, imposed a tax of two cents per pound on cotton. The language of the statute is as follows:

On cotton upon which no duty has been levied, and which is not exempted by law, a duty of two cents per pound, which shall be and remain a lien thereon until said duty shall have been paid, in the possession of any person or persons whomsoever.

The exemption provided for in this clause related to cotton sold by or on account of the Government of the United States, which was sold and delivered to the purchaser free of tax, and so understood between the parties at the time of sale and purchase.

The same act provided that whenever any cotton, the product of the United States, should arrive at any port of the United States from any State in insurrection against the Government, the assessor or assistant assessor should immediately assess the taxes due thereon. And the tax became a lien on the cotton from the day of such assessment.

The act of July 13, 1866, imposed a tax of 3 cents per pound on cotton. The language of the statute is as follows, to wit:

That on and after the 1st day of August, 1866, in lieu of the taxes on unmanufactured cotton, as provided in "An act, &c.," approved June 30, 1864, as amended by the act of March 3, 1865, there shall be paid by the producer, owner, or holder, upon all cotton produced within the United States, and upon which no tax has been levied, paid, or collected, a tax of 3 cents per pound, * * * and such tax shall be and remain a lien thereon, in the possession of any person whomsoever, from the time when this law takes effect, or such cotton is produced as aforesaid, until the same shall have been paid.

At the time of the passage of this last act the authority of the United States Government had been re-established over all the insurrectionary States, and said States had been divided into convenient collection districts, and assessors and collectors appointed to assess and collect all taxes which might accrue therein.

The act of March 2, 1867, provided that (section 1) on and after the 1st day of September, 1867, a tax of 2½ cents per pound only should be levied, collected, and paid on any cotton produced within the United States. And on the 3d of March, 1868, Congress passed an act providing "that all cotton grown in the United States after the year 1867 shall be exempt from internal tax."

According to the returns made to the Commissioner of Internal Revenue, there were collected on cotton the following amounts, to wit:

For the fiscal year ended June 30, 1863	\$351, 311 48
For the fiscal year ended June 30, 1864	1, 268, 412 56
For the fiscal year ended June 30, 1865	1, 772, 983 48
For the fiscal year ended June 30, 1866	18, 409, 654 90
For the fiscal year ended June 30, 1867	23, 769, 078 80
For the fiscal year ended June 30, 1868	22, 500, 947 77
Making a total sum of	<u>68, 072, 388 99</u>

The tax in all cases being imposed on the cotton, and required to be paid by the producer, owner, or holder, as the case might be, and being a lien on the cotton from the day of assessment until the same was paid, the collection of these taxes was often and largely made in States other than those in which the cotton was grown. Returns of collections from cotton were made from no less than twenty-six States, many of them States which produced no cotton, though the returns show that most of the tax was collected in the cotton-producing States.

The following is a list of the States in which taxes on cotton were collected, and the several amounts collected in each, to wit:

In Alabama	\$10,388,072 10	In Mississippi	\$8,742,995 93
In Arkansas	2,555,638 43	In Missouri	592,098 36
In California	430 04	In New Jersey	3,656 42
In Connecticut	193 64	In New York	867,942 68
In Florida	918,944 98	In North Carolina	1,959,704 87
In Georgia	11,897,094 98	In Ohio	447,127 12
In Illinois	379,144 42	In Pennsylvania	78,535 06
In Indiana	92,727 22	In Rhode Island	2,424 73
In Kansas	286 15	In South Carolina	4,172,420 16
In Kentucky	553,327 45	In Tennessee	7,873,460 71
In Louisiana	10,098,501 00	In Texas	5,502,401 24
In Maryland	51,349 52	In Utah	1,375 34
In Massachusetts	66,679 30	In Virginia	825,856 87

Of the twenty-six States enumerated above, and in which portions of the cotton-tax were collected, fifteen are not known as cotton-growing States, and none of the cotton on which taxes were collected was produced in those States, if we except, perhaps, two or three States, which, during the war, might have grown a very small quantity of an inferior article, as, for instance, the States of Illinois, Missouri, and Kentucky. The taxes collected in those States were on cotton which had been brought into the same from the insurrectionary States before any tax had been collected on it, and were assessed on the cotton in the hands of the owner, purchaser, or holder, according to the terms of the statute.

I have thus given a condensed statement with a view of showing the different enactments of law under which the cotton-tax was collected; the amounts collected for each fiscal year while the cotton-tax law was in force; the several States in which the tax was collected, and the total amount collected in each State, respectively, with the sum-total collected in all of said States. I have only to add further that in twenty States and Territories no returns were ever made to the Office of Internal Revenue of taxes collected on cotton. I have endeavored to show, also, that the power conferred on Congress by the Constitution to levy and collect taxes is not limited to particular and specified objects and sources, but, on the other hand, that it is general and unrestricted; and further, I have endeavored to show that at the time the cotton-tax was imposed the situation of the country and the wants of the Government were such as fully to warrant Congress in exercising the power conferred upon it to lay and collect taxes, duties, imposts, and excises to the utmost extent of the ability of the people to pay the same; and that the purposes for which these taxes were levied were national in their objects and character, were indeed the very purposes for which the people ordained and established the Constitution, as set forth in the preamble of that instrument.

Conceding that Congress has the power to lay and collect taxes, duties, imposts, and excises, the Constitution declares that they "shall be uniform throughout the United States," and it is alleged that the cotton-tax was levied and collected in violation of this rule of uniformity. The Constitution declares, section 9, clause 4, article 1, "that no capitation or other direct tax shall be laid unless in proportion to the census or enumeration hereinbefore directed to be taken." Direct taxes are well understood to be taxes on land and other real estate, and poll or capitation taxes on the persons of individuals.

By the act of August 5, 1861, a direct tax of twenty millions of dollars was annually laid upon the United States and Territories in proportion to the population of each, severally, as shown by the previous enumeration. In levying and collecting direct taxes, the Constitution itself has clearly defined the rule of uniformity. Each State shall pay according to, or in proportion to, its population, as previously ascertained by an

actual enumeration thereof. But no such rule of uniformity was contemplated by the Constitution with regard to indirect taxes, to imposts, and excise duties, and no such rule could be adopted, in the very nature of such taxes. Indirect taxes are taxes levied upon articles of consumption. The tax becomes a part of the cost of the article. It is paid by the consumer, and each person pays only so much as he consumes of the article.

What is the rule of uniformity in such cases? It cannot be that each State shall pay in proportion to its population. It cannot be construed to be such a rule as would limit Congress in its power to tax, so that only such objects would be legitimate sources of taxation as are common products of every State and Territory in the Union, and even then only in proportion to its population. Such a rule of uniformity, if adopted, would leave the National Government without the power of providing for its own expenditures. For, if applied to excise taxes levied upon the manufactures and products of the country, it might with equal propriety be claimed as the rule governing collections on imports; for imposts as well as excises are taxes upon articles of consumption, paid by the consumer, not according to any enumeration, nor paid according to the population of any or each State, but according to the quantity or amount of such article consumed by the people, by each person in his individual capacity.

What, then, is the rule of uniformity, according to which all imposts and excises are to be levied and collected throughout the United States? I reply that *it is the adoption of one rule or mode throughout the United States—a uniform rate in each and every State and Territory; so that whatever rate of tax is paid in one State or Territory, the same shall be paid in all; a uniform mode of assessing and collecting the tax, so that the burden of taxation shall fall equally upon the entire product of the country; and so that no undue advantages shall be given to the manufacturers or producers of one State over those of another State, or to the importers of foreign goods entering goods at ports of any particular State over the importers of any other State.*

Strictly in accordance with this rule of uniformity was the tax levied and collected on cotton. The rate of tax was the same for the same period on *all cotton grown* in the country, and a uniform mode of assessing and collecting the tax was observed. The tax was levied on the article—"on all cotton," and the tax was made a lien on the same in whosoever hands it might be found. If no tax had been assessed and collected before the cotton removed from the place where it was grown, then it was assessed and collected in whatever collection district or State it might be found. It is true that the rate of tax was several times changed, and so was the rate of tax on other articles and products changed from time to time as the exigencies of the Government demanded. At first, the rate of tax was one-half of one cent per pound; afterward, it was increased to two cents per pound, then to three cents per pound; then it was diminished to two and one-half cents per pound. But whatever the rate of the tax, the rule of uniformity was strictly preserved. At one and the same rate the tax was assessed and collected throughout the United States. Conforming to one rule or mode, the assessments and collections were everywhere made. Whenever practicable, the tax was collected in the State where the cotton was grown. But if the cotton was removed from the State where it was grown without the tax being collected thereon, then it was collected in the State to which it had been shipped; and whenever and wherever

the tax had been assessed, it became and remained a lien on the cotton until the same was paid.

One rule, and that strictly uniform, was thus observed throughout the United States in levying and collecting the cotton-tax, and the only rule of uniformity that the case admitted of. To deny the constitutional power of Congress to tax cotton grown in the country on account of a want of uniformity, because a portion of the States, or even a majority of them, produce no cotton, is to deny, not only the right of Congress to levy and collect a tax on cotton, but to tax any article produced by a State, whether an agricultural product or a manufacture, unless the same article is a common product of all the States and Territories; for the two cases are upon precisely the same reason. I will even go further, and assert that to require any other rule of uniformity than the rule I have shown was adopted in the collecting of the cotton-tax, viz, a uniformity in the rate of tax, and a uniformity in the mode of assessing and collecting the tax, would be to take from Congress the power of laying and collecting taxes on imports; for this is the only rule of uniformity which such taxes admit of throughout the United States. You cannot collect taxes on imports according to the rule of apportionment; and, fortunately, the Constitution requires such a rule only in case of direct taxes: "Representatives and direct taxes shall be apportioned among the several States which may be included within this Union according to their respective numbers." "No capitation or other *direct tax* shall be laid unless in proportion to the census or enumeration hereinbefore directed to be taken." But the Constitution declares that "all duties, imposts, and excises shall be uniform throughout the United States," without prescribing what the rule of uniformity shall be; and I think I have shown conclusively that Congress did observe a *rule of uniformity*, and the only one the case admitted of, in levying and collecting the cotton-tax. They made the rate of taxation the same, and the mode of assessing and collecting the tax the same in whatever State or Territory, and in every State or Territory, where cotton was produced, or to which it was removed; and in conformity with the same rule all imposts and excise taxes have been and are now being collected.

Again, it is alleged that the cotton-tax was unconstitutional, because it was a tax on articles exported from a State. Clause 5 of section 9, article 1 of the Constitution, declares that "No tax or duty shall be laid on articles exported from any State. No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another; nor shall vessels bound to or from one State be obliged to enter, clear, or pay duties in another."

In commenting upon this clause of the Constitution, Judge Story remarks that "the obvious object of its provisions is to prevent any possibility of applying the power to lay taxes, or regulate commerce, injuriously to the interests of any one State so as to favor or aid another. If Congress were allowed to lay a duty on exports from any one State, it might unreasonably injure, or even destroy, the staple productions or common articles of that State. The inequality of such a tax would be extreme."

Congress has not power to lay a duty on exports from any State. The reason why no such power was permitted to Congress is well stated in the quotation above, and no one, I presume, would claim for Congress any such right, or undertake a defense of Congress should it attempt to exercise such a right.

The cotton-tax was not levied as a tax on an article of exportation, or because it was exported, but as a product of the country largely

consumed by the country ; an article which entered directly into fabrics manufactured more or less in every State in the Union, and constituting a material portion of the clothing and household furnishing of every family and individual in the country. It was levied and collected, as I have before shown, at a time when the perpetuity of the Government and the future well-being of its nearly forty millions of people were trembling in the balance. It was imposed as a war measure, or a war tax—a tax levied on cotton “held or owned by any person or persons, corporations, or associations of persons,” on or after the 1st day of October, 1862. It was an internal-revenue or excise tax. The act under which the tax was imposed is entitled “An act to provide internal revenue to support the Government and to pay the interest on the public debt.” It was passed by Congress in pursuance of the authority and power granted by the Constitution of the United States “to lay and collect taxes, duties, imposts, and excises,” and not in the exercise of a power denied to Congress. Had Congress imposed a tax on cotton or any other agricultural product, on lumber or iron, or gold or silver, or manufactured articles, when exported from a State, and *because* they were exported, making the fact of such exportation the reason for such tax and the grounds for assessing and collecting it, such a tax would have been clearly in violation of the Constitution. It would have been an exercise of a power denied to Congress. But such was not the case with the tax levied on cotton. The question of exportation nowhere entered into the account. No liability was incurred on any cotton which was or might have been exported which would not have accrued equally on the same had it been retained in the State where it was produced. The tax was on all cotton which had been produced, and was in the possession of any person or persons, except such as might be in the hands of a manufacturer of cotton fabrics on the 1st day of October, 1861, and on all cotton thereafter produced until the repeal of the tax. The same laws that imposed a tax on cotton imposed like taxes on all the leading industries of the country, and for the same purpose : with no invidious distinction or desire to cripple the industry of a State by imposing a tax on one of its chief staples, not by the imposition of a tax on “exports,” but by the imposition of an excise tax on an article of universal use or consumption, and in such a manner that the payment of the tax, like all indirect taxes, should fall upon the consumer, and of which every person paid only so much as he consumed of the article.

I have thus endeavored to show that the arguments advanced in favor of refunding the cotton-tax, so far as they are founded on any alleged violation of the Constitution, and of those clauses of the Constitution which require that all taxes, duties, imposts, and excises shall be uniform throughout the United States, and that no tax or duty shall be laid on articles exported from a State, are specious and superficial, and are neither warranted by the letter nor spirit of that instrument, by the laws of Congress which imposed the tax, by the circumstances under which the tax was imposed, nor by the manner prescribed for assessing and collecting the tax ; but, on the contrary, the Constitution confers on Congress power to levy taxes, duties, imposts, and excises to any extent deemed necessary to pay the public debt and to provide for the common defense and welfare of the United States ; that the cotton-tax was levied in pursuance of the power granted by the Constitution, was levied according to a strict rule of uniformity, and was an internal-revenue tax, and not a tax “on articles exported from any State.”

Having thus disposed of the constitutional question involved in this

case, I now propose to examine the second reason urged for the refunding of the cotton-tax, viz, that "the tax was unequal and oppressive in its operation ;" and,

1. This alleged inequality is based on the assumption that the tax fell entirely upon the producers of the cotton.

But this assumption is in direct opposition to the whole theory of indirect taxes, and in palpable opposition to the facts in this particular case. Indirect taxes—and such are all taxes imposed and collected on goods, wares, merchandise, and articles imported from foreign countries, and all excise taxes imposed and collected upon the manufactures and products of a country—when paid by the importer, manufacturer, or producer, are added to the original cost of the article by the importer, or added by the manufacturer or producer to the cost of production, and is one of the items which go to make up the price or value of the article. The tax enhances the price or value of the article. The consumer is required and is obliged to pay so much more in consequence of the impost or excise tax.

Indirect taxes are paid by the consumers of the articles taxed, and each person pays so much, and only so much, of any given tax of this kind as he consumes of the articles taxed. This is the theory of all indirect taxation, and the facts in the case correspond with the theory. Every one at all conversant with the facts in this case knows, that immediately upon the imposition of internal-revenue taxes by the act of July, 1862, there was an advance in the prices of all articles, goods, wares, and merchandise upon which a tax was levied, and there was a constant appreciation of prices corresponding with the increase in the rates and amount of tax imposed from time to time, and these advanced prices were kept up until the taxes were removed. Under the tariff laws, passed at the same time, prices of all imported goods advanced equally with the advanced prices of domestic goods. Who paid the tax of 20 cents per pound on tea? The tax of 10 cents per pound on coffee? The taxes on silks, broadcloths, wines, liquors, &c., of 40, 50, 60, or 100 per cent. *ad valorem*? Not the importers of these articles, but the consumers. And who paid the tax of 3, 5, or 6 per cent. *ad valorem* on all agricultural implements, if not the farmers of the country who purchased and used such implements? Who paid the taxes on all cloths, and knitted, woven, or felted fabrics? On boots, shoes, and clothing of all descriptions? On mineral coal; on salt, fruits, fish, vegetables, &c.? The people paid these taxes, and with a cheerfulness and an alacrity truly surprising. And the people would regard any man as insane who should seriously deny that they had paid any portion of these taxes, and claim that it was only the importers, the manufacturers, and the producers that had been paying the Government taxes for the last ten years. True, the Government looks to the importer, the manufacturer, and the producer primarily to pay such taxes, which they in turn charge over to and collect from the purchaser or the consumer. To have collected from the consumers of tea and coffee the duties levied on those articles by the act of August 5, 1861, and subsequent acts, would have been attended with as many difficulties, and been as equally impracticable and impossible, as it would now be to refund to the consumers of tea and coffee all the taxes they have paid on those articles since the above date. But because of this inherent impossibility of collecting these taxes otherwise than is done by and through the importers, manufacturers, and producers, we are not, on that account, any the less to regard them as taxes paid by the consumers.

During the entire period the law taxing cotton was in force the de-

mand for cotton exceeded the supply. After April, 1861, additional supplies of cotton from the States in insurrection were almost entirely cut off. The stock on hand at the time of the passage of the first internal-revenue law had been so nearly consumed that almost any price could be obtained for it by those who had cotton to sell. The tax of one-half a cent a pound was a matter of no moment, and was cheerfully paid by the purchaser. The old stock in time became entirely exhausted. Cotton fabrics brought fabulous prices, and were entirely insufficient to meet the demand. Substitutes for cotton had to be sought, and even cotton rags were picked up by machinery, and an article of cotton shoddy, unknown to trade before, was made to help supply the demand for cotton. Not only was there no cotton to keep the mills in this country in operation, but the supply for foreign countries was also short. Cotton everywhere advanced in price, and those prices have never receded to their normal condition before the war. To-day cotton is quoted at 20, 21, and 22 cents per pound in the markets of the country, whereas before the war 10 cents per pound was a remunerative price. During all the period of the cotton tax high prices prevailed. The demand exceeded the supply, so that there was no obstacle in the way which prevented the producers adding the tax to the cost of production, and compelling the purchaser to pay the same. That they did so there can be no doubt. Any other supposition would argue that the cotton-producers are less awake to their own interests, and less shrewd in protecting them, than other classes of tax-payers—propositions not to be entertained.

These facts, which are incontrovertible, go to show conclusively that the consumers of cotton fabrics in this country paid their full share of the cotton-tax; and the short supply and high prices ranging in foreign markets amply protected the cotton growers and shippers, and enabled them, notwithstanding the tax, to realize prices unusually remunerative on all cotton exported from the country.

2. The second reason urged why this cotton-tax was unequal and oppressive, is, that it was imposed without the consent of the southern people, and when they were wholly unrepresented.

To this I reply that neither the assent nor the consent of the people is required to be had before Congress can levy any tax within its legitimate power, and which, in its judgment, is required to enable it to discharge the duties and meet the obligations of the National Government. Congress did not ask consent of the manufacturers or the miners, of the fishermen or the mill-men, of the country, to levy and collect taxes on their several industries; and why should it any more have gained the consent of the cotton-growers before taxing that article? By the people of the whole country, the South no less than the North and the West, the power of imposing taxes, and the right of judging as to the time of levying them, the extent to which they shall be levied, and the articles and sources upon which they shall be levied and collected, are conferred upon Congress. The people may make known their wishes through their petitions, they may utter their objections through remonstrances; but neither petitions nor remonstrances can take from Congress the power or the right to pass such revenue laws as it shall deem expedient. The people having once delegated that right and power to Congress, they must now abide by the decisions which Congress shall make.

That the southern people were wholly unrepresented in Congress when the internal-tax bill, which imposed a tax on cotton, was passed, is only too true. But whose fault was it that they were unrepresented?

It was not the fault of the States that *were* represented, nor of the *people* of those States. It was not the fault of *Congress*, nor of the *judicial* or *executive* branches of the Government. It was not the fault of any one or all of these. It was the fault of the cotton States and the people of the cotton States. It was the fault of their own Senators and Representatives. These, one after another, under instructions from those whom they represented, or self-impelled, resigned their seats in Congress and returned to their constituents to make war upon the United States, to disrupt the Federal Union, and to establish a southern confederacy out of the broken fragments. These were voluntary acts on the part of the Southern States and their representatives. Gladly would I draw the veil of oblivion over this painful record; but where such a reason as this is put forth for the refunding of a tax made necessary by the very circumstances on which the claim for refunding is based, the truth must be told. Had the representatives of the South remained in allegiance to the National Government, had they retained their seats in Congress and used the same amount of influence and persuasion to dissuade their people from entering into insurrection and rebellion as they did exert to push them into it, there would have been no rebellion, no war, no cotton-tax, no internal-revenue tax of any kind. Having chosen their own course and taken it voluntarily, having committed the great wrong of resigning their seats in Congress, inaugurating war, and prosecuting it until hope was extinguished and all further efforts became vain and futile, we say, and we have a right to say, "Gentlemen, you cannot now take advantage of your own errors, wrongs, and mistakes."

In the late war between France and Germany, after most of the territory of France had been overrun by the German armies, and the city of Paris had capitulated, Germany demanded, as a condition of peace, that France should pay her war expenses; and no less a sum than five thousand millions of francs, or nearly one thousand millions of dollars in gold and silver, were required to be paid as indemnity by the conquered nation, in addition to the cession of two entire provinces of France to Germany, Alsace and Lorraine, and German garrisons were left in France, and a portion of them are still there, to enforce the payment of this money. Contrast this with the conduct of our own Government toward the rebellious States of the South. I will not undertake to draw the contrast; it is too apparent to need drawing. And yet these States now come forward and ask Congress to provide for refunding (to whom?) the tax, amounting to some sixty-eight millions of dollars, levied and collected on cotton during the four years she was waging an unsuccessful war against the national Government; a tax, too, not paid by the cotton States exclusively or mainly, but paid, as I have shown, by the people of the country who were consumers of cotton fabrics, or by foreign consumers, who purchased the cotton at enhanced prices on account of tax. And one of the reasons for this demand now made upon the Government is that the South was wholly unrepresented in Congress at the time the cotton-tax was levied. What greater proof could be given of the kindness and leniency of the General Government than the fact that within six years from the close of the rebellion, and even before time had been given for a complete restoration of all the seceding States to their former relations, such a proposition could not merely be entertained by any considerable number of persons, but confidently and persistently urged upon Congress for its favorable action.

I now come to examine the third and last reason I have seen offered why this cotton-tax should be refunded—on the ground that it was unequal and oppressive in its operation, to wit:

3. "Because the producers of cotton paid the same taxes that all other citizens paid, and the extra tax on cotton besides."

If what I have aimed to establish, and what I think I have established beyond the possibility of successful contradiction, be true, viz, that all indirect taxes are paid alternately by the consumers, and that the tax levied and collected on this cotton was paid equally by the consumers as other taxes of an indirect character, as taxes on coals, oils, salt, tobacco, distilled spirits, &c., then this reason urged for a refund of the cotton-tax entirely fails. And I have no hesitation in declaring it as my settled conviction that the same and equally good reasons exist to-day why Congress should provide by law for refunding all taxes collected on mineral coals, pig-iron, on petroleum, and other crude oils, on salt, manufactured tobacco, distilled spirits, and numerous other articles that I could name, as that the taxes collected on cotton should be refunded.

That the so-called cotton States have not paid more than their proportionate share of the internal-revenue taxes which have been collected since September 1, 1862, till the present time, facts and figures, which are matters of record in the Office of Internal Revenue, will fully attest. During the continuance of the rebellion, and until after its close and the establishment of collection-districts over the south, which covered the entire fiscal years of 1863, 1864, and 1865, no taxes were collected in said States, save and excepting small collections on the articles of cotton and turpentine, collected by Treasury agents within the lines of the Union armies. And after the establishment of collection-districts, instructions were issued by the Secretary of the Treasury and the Commissioner of Internal Revenue to the revenue-officers of the South, not to enforce the collection of taxes on any manufactured articles, or distilled spirits, on manufactured tobacco found in the hands of a purchaser, where satisfactory evidence was furnished that such articles, &c., had been actually sold, and had passed out of the hands of the manufacturer before the establishment of collection-districts and the appointment and qualification of assessors and collectors. The only exception made to this rule was in the case where goods, made subject to tax by any internal-revenue law, were shipped beyond the limits of the States which had been in insurrection, and were put upon the market to compete with like goods on which a tax had been paid. Complete exemption was given to all goods manufactured and sold in the insurrectionary States during the continuance of the rebellion, and no attempt was ever made to hold the manufacturers of the South liable for any taxes on articles made and consumed during the continuance of the war or afterward, if consumed within the limits of the States which had been in insurrection.

Up to June 30, 1872, according to the last annual report of the Commissioner of Internal Revenue, the aggregate amount of taxes collected from all sources under the several internal-revenue laws since September 1, 1862, is a little over seventeen hundred and fifty-eight millions of dollars, and I find, upon examination, that of every one thousand dollars of this sum, the article of cotton paid thirty-eight dollars, while tobacco and distilled spirits paid one hundred and thirteen, and one hundred and ninety-one dollars, respectively, on each one thousand. I presume the cotton States actually consumed their full share of the tobacco and distilled spirits consumed in the country, and therefore did, as consumers, pay their proportion of these taxes during the period since they have commenced to use tax-paid tobacco and distilled spirits on which taxes have been collected. But what I mean to say is, that where cotton has paid one dollar tax, tobacco has paid three, and distilled spirits five

dollars, and that these taxes were collected mainly in States other than cotton-producing States. But I have another comparison to make, which, I think, demonstrates mathematically that the allegation that the producers of cotton paid the same taxes that all other citizens paid, and the cotton-tax which others did not pay, is without foundation in fact.

According to the census of 1870 the State of Rhode Island, which produces no cotton, has about 30,000 more of population than the State of Florida, which is a cotton-producing State. By an examination of the returns made of collections from these two States I find that, while the collections from other sources than cotton made in Rhode Island amount to the round sum of \$25,024,953, the collections from sources other than cotton, in Florida, show only the inconsiderable sum of \$538,508. Comparing the State of Alabama, with a population of 996,992 persons, with the State of New Jersey, having a population of 906,096, or 90,000 less, the former being a cotton-growing State, while the latter produces no cotton, I find that the collections made in the former, from sources other than cotton, was \$3,812,910; while the collections from the latter were \$48,524,642. In Georgia, containing a population of 1,184,109 persons, there were collected, from other sources than cotton, \$6,520,515; while in Michigan, with a population of 1,184,059 persons, there were collected \$24,099,806. I could continue these comparisons between the cotton-producing States and States which produce no cotton, showing the same relative differences in the amount of taxes collected from other sources than cotton. And even including cotton, it will be found that the sum total of all collections are largely in excess in the non-producing cotton States. Thus:

Florida shows a total tax of	\$1, 457, 453
Rhode Island a total tax of	25, 027, 378
Alabama a total tax of	14, 200, 982
New Jersey a total tax of	48, 528, 298
Georgia a total tax of	18, 417, 610
Michigan a total tax of	24, 099, 806

As stated in the early part of this argument, Congress, in the exercise of its constitutional power, and to meet the exigencies in which the rebellion had placed the national Government, resorted to a system of taxation so broad and comprehensive in its objects and scope as to bring the entire products of the country within its range. The cotton and tobacco of the South were taxed equally with the coal, the oils, and iron of the Middle States; the agricultural products of the West, the gold and silver and fisheries of the Pacific States; and the lumber, stone quarries, and manufactures of the Northern and Eastern States. These taxes were assessed and collected with no invidious distinctions. They have been paid by the people; and if any portion of them is to be paid back, whether it be that portion collected on cotton or from any other source, the people have got to provide the means of making such payment by taxes collected from themselves in some other way. Who will say that Congress shall continue to collect taxes on manufactured tobacco, distilled spirits, and fermented liquors, for the purpose of paying back those which have been paid on cotton? And if the cotton-tax is to be paid back, why not pay back taxes collected on petroleum, pig-iron, and anthracite and other coals, paid principally in Pennsylvania? The tax on gold and silver collected in California? The fish of Oregon? The oysters of Maryland? The lumber of Maine and Michigan? The salt of New York and West Virginia? And so on through the whole

range of articles and products on which taxes have been levied and collected; and if paid back, they never can be paid to the persons entitled to them, as I think I have most conclusively shown, viz, to the *consumers* of the country.

In view of the considerations and the facts I have thus presented, I am forced to the conclusion that there are no obligations resting upon the Government of the United States to refund the cotton-tax, either based on those clauses of the Constitution that require that all taxes, duties, and imposts, shall be uniform throughout the United States, and that no duties shall be levied on any articles exported from a State, or based on any principles of justice and equity which have been violated in levying and collecting the cotton-tax; nor on account of any disproportion in the amounts of internal taxes paid by the cotton States. But, on the contrary, that it would be grossly unjust to require *the people* of this country, after having *once paid* this tax, to be taxed again to pay it *a second time*; not to the Government; not to the consumers of the country, which is impossible, but to middle-men; to men who paid no more than their proportionate share of the tax originally, and who have no just claims upon the Government for this money. For the official records of the Government show that the tax on a large proportion of the cotton was assessed and collected from these middle-men or factors, and if it is to be paid back to them, they will receive it from the Government, not as the payment of a debt, but rather as a gift.

ISRAEL KIMBALL,

*Head of Division in Charge of Manufactures,
Products, &c., and Taxes on Sales.*

INTERNAL-REVENUE OFFICE, *January 28, 1873.*

○

EXPENDITURES FROM CONTINGENT FUND — TREASURY
DEPARTMENT.

L E T T E R

FROM

THE SECRETARY OF THE TREASURY,

TRANSMITTING

A detailed statement of the expenditures from the contingent, fuel and lights, and furniture and carpet funds of his Department for the fiscal year ended June 30, 1872.

FEBRUARY 8, 1873.—Referred to the Committee on Appropriations and ordered to be printed.

TREASURY DEPARTMENT,
Washington, D. C., February 3, 1873.

SIR: I have the honor herewith to inclose a detailed statement of the expenditures from the contingent, fuel and lights, and furniture and carpet funds of this Department for the fiscal year ended June 30, 1872, as required by the first section of the act of March 3, 1869.

I have the honor to be, very respectfully, your obedient servant,
GEO. S. BOUTWELL,
Secretary.

HON. JAMES G. BLAINE,
Speaker of the House of Representatives.

TREASURY DEPARTMENT,
Washington, D. C., February 3, 1873.

SIR: I have the honor herewith to inclose a detailed statement of the expenditures from the contingent, fuel and lights, and furniture and carpet funds of this Department for the fiscal year ended June 30, 1872, as required by the first section of the act of March 3, 1869.

I have the honor to be, very respectfully, your obedient servant,
J. H. SAVILLE,
Chief Clerk.

HON. GEORGE S. BOUTWELL,
Secretary of the Treasury.

2 CONTINGENT EXPENSES OF THE TREASURY DEPARTMENT.

Expenses of the Treasury Department for the fiscal year ended June 30, 1872.

Date.	Name.	Article.	Amount.
CONTINGENT.			
1871.			
July 1	E. C. Bartlett	Mileage	\$40 00
12	H. Baumgarten	Hand-stamps, &c.	17 50
27	S. D. Castleman	2 barrels of lime	2 20
28	A. V. S. Smith	Copper wire cord	11 00
28	T. Mach	1,665 pounds of hay	29 97
28	Walker White	Night-work	1 00
28	Joseph Witherall	2,235 pounds of hay	37 99
28	A. Bean	2,615 pounds of straw	26 15

REMOVAL OF GREAT AND LITTLE OSAGE INDIANS.

LETTER

FROM

THE SECRETARY OF THE INTERIOR,

RELATIVE TO

An appropriation of \$1,240,000 for the removal of the Great and Little Osage Indians from Kansas, in conformity to law and treaty stipulations.

FEBRUARY 8, 1873.—Referred to the Committee on Appropriations and ordered to be printed.

DEPARTMENT OF THE INTERIOR,
Washington, D. C., February 4, 1873.

SIR: In conformity to law and treaty stipulations, the Great and Little Osage Indians have been removed from Kansas and located upon lands in the Indian Territory, ceded by the Cherokees, under the treaty of 19th July, 1866, for the settlement of friendly Indians.

The area of country selected for the Osages is, in the absence of plats of survey, estimated to contain 1,650,529 acres; and, in order that the Cherokees may be paid for the land thus occupied by the Osages, it will be necessary that an amount sufficient for the purpose should be transferred from the moneys received from the sale of the Osage lands to the credit of the Cherokees, and the sum be placed at the disposal of the Secretary of the Interior, to be invested as is provided in the twenty-third article of the treaty aforesaid.

I have the honor to transmit herewith a copy of a report, dated the 29th ultimo, from the Acting Commissioner of Indian Affairs, which presents a statement of the facts in the case, together with an amendment to the appropriation bill now pending before Congress—the same to be inserted after line 963 of said bill, as it passed the Senate—which is considered necessary to enable this Department to comply with the provisions of the twenty-third article of the treaty referred to.

I will remark while it is believed the sum of \$1,240,000 will be sufficient for the purpose, the amount named in the amendment submitted by the Acting Commissioner was not changed, as the language, “or so much thereof as may be necessary,” will restrict the Department to the specific amount required, when the exact area of the tract and the price to be paid therefor are determined and fixed.

Very respectfully, your obedient servant,

C. DELANO,
Secretary.

To the SPEAKER
of the House of Representatives.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, D. C., January 29, 1873.

SIR: I have the honor to state that the Cherokee treaty of 1866, (Stat. at Large, vol. 14, p. 799,) ceded to the United States, for the settlement of friendly Indians, all the lands of the Cherokees west of the 96th meridian. The 12th section of the act of Congress approved June 15, 1870, (Stat. at Large, vol. 16, p. 362,) provided for the sale of the Osage lands in Kansas, the removal of these Indians to homes in the Indian Territory on the Cherokee ceded lands, and the payment out of the proceeds of the sale of the said lands in Kansas for the lands thus to be occupied by the Osages in the Indian Territory. The act of Congress approved June 5, 1872, (Stat. at Large, pamp. ed., p. 228,) confirmed to the Great and Little Osages that portion of the Cherokee lands referred to in said treaty of 1866, lying between 96° west longitude and the Arkansas River.

The number of acres thus confirmed cannot now be definitely ascertained, in the absence of some of the plats of survey, but the area, as nearly as can be, is estimated at 1,650,529.03 acres, which, at the rate of one dollar per acre, (which is probably as high a rate as will be decided upon,) would amount in round numbers to \$1,650,600, a sum that will be sufficient to make payment for the same.

That the Cherokees may receive pay for the lands thus sold to the Osages, it will be necessary that said sum of \$1,650,600, or as much thereof as may be required, should be transferred from the amount received for the sale of the Osage lands, as aforesaid, to the credit of the Cherokees, and this sum placed at the disposal of the Secretary of the Interior, to enable him to invest the sum as provided in the 23d article of said Cherokee treaty of 1866.

I have, therefore, caused to be prepared and inclosed herewith an amendment to the Indian appropriation bill now pending before Congress, the same to be inserted after line 963 of said bill as it passed the Senate, and respectfully recommend that the same be laid before that body for its favorable consideration and action.

Very respectfully, your obedient servant,

H. R. CLUM,
Acting Commissioner.

The Hon. SECRETARY OF THE INTERIOR.

Provided, That the Secretary of the Treasury is hereby authorized and directed to transfer from the proceeds of sale of the Osage Indian lands in Kansas, made in accordance with the twelfth section of the act of Congress approved July fifteenth, one thousand eight hundred and seventy, the sum of one million six hundred and fifty thousand six hundred dollars, or so much thereof as may be necessary, and to place the same on the books of his Department to the credit of the Cherokee Indians, in accordance with the act of Congress approved June fifth, one thousand eight hundred and seventy-two, entitled "An act to confirm to the Great and Little Osage Indians a reservation in the Indian Territory," and the acts of Congress and treaties therein mentioned and referred to, whenever the amount to be so transferred shall be certified to the said Secretary of the Treasury by the Secretary of the Interior. And the Secretary of the Interior is hereby authorized to draw from the Treasury, by requisition in due form, the amount so transferred, and invest the same in United States registered stocks, in accordance with the provisions of the twenty-third article of the Cherokee treaty of July nineteenth, one thousand eight hundred and sixty-six.

PUBLIC BUILDING AT SAINT JOSEPH, MISSOURI.

LETTER

FROM

THE SECRETARY OF THE TREASURY,

RELATIVE TO

The erection of a public building at Saint Joseph, Missouri.

FEBRUARY 8, 1873.—Referred to the Committee on Public Buildings and Grounds
and ordered to be printed.

TREASURY DEPARTMENT,
Washington, D. C., February 1, 1873.

SIR: I have the honor to acknowledge the receipt of the following
resolution:

On motion of Mr. Isaac C. Parker,

Resolved, That the Secretary of the Treasury be, and he is hereby, requested to inform the House of the necessity for the erection of a public building at Saint Joseph, Missouri, to be used by the United States Government as a post-office, custom-house, internal-revenue office, and United States circuit and district court rooms; also, the probable cost of the same, and the opportunity of obtaining material for the erection of the same in Missouri or Kansas.

And have to say, in reply, that the Department is not in possession of any information that would warrant it in making a specific recommendation on the points covered by the resolution.

The Department is now paying rent for the premises occupied by the internal-revenue officers, at the rate of \$600 per annum, and is informed that the Post-Office Department is paying rent for the post-office, at the rate of \$1,000 per annum.

The Department is not in possession of any information as to the facilities for obtaining building-materials in that section of the country.

Very respectfully,

GEO. S. BOUTWELL,
Secretary.

Hon. JAMES G. BLAINE,
Speaker House of Representatives.

THE SECRETARY OF THE TREASURY

Washington, D. C., January 1, 1892.

Dear Sir:

I have the honor to acknowledge the receipt of your letter of the 29th inst.

in relation to the proposed amendment to the National Currency Act, and in reply to inform you that the same has been forwarded to the proper authorities for their consideration.

I am, Sir, very respectfully,
Your obedient servant,
J. M. [Signature]

Very respectfully,
J. M. [Signature]

42D CONGRESS, }

REPORT

ON THE

INTERNATIONAL PENITENTIARY CONGRESS

OF

LONDON,

HELD JULY 3-13, 1872.

By E. C. WINES, D. D., LL. D.,

UNITED STATES COMMISSIONER.

TO WHICH IS APPENDED

THE SECOND ANNUAL REPORT OF THE NATIONAL PRISON ASSOCIATION
OF THE UNITED STATES, CONTAINING THE TRANSACTIONS
OF THE NATIONAL PRISON REFORM CONGRESS,
HELD AT BALTIMORE, MARYLAND,
JANUARY 21-24, 1873.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1873.

REPORT

OF THE

NATIONAL BUREAU OF INVESTIGATION

CONDUCTED BY

JOHN EDGAR HOOVER

BY J. C. WOODS, D. C.

CHIEF OF BUREAU

IN CONNECTION WITH

THE SPECIAL AGENT REPORT OF THE NATIONAL BUREAU OF INVESTIGATION
ON THE CASE OF THE NATIONAL BUREAU OF INVESTIGATION
HOLD AT BUREAU OF INVESTIGATION
JANUARY 1913

WASHINGTON

GOVERNMENT PRINTING OFFICE
1913

To the Senate and House of Representatives :

I transmit herewith a report from the Secretary of State and accompanying papers.

U. S. GRANT.

WASHINGTON, *February* 13, 1873.

DEPARTMENT OF STATE,
Washington, February 13, 1873.

Referring to the joint resolution of Congress, of the 20th March, 1871, authorizing the appointment, by the President, of a commissioner to attend an International Congress on Penitentiary and Reformatory Discipline, proposed to be held in Europe, I have the honor to transmit herewith the report of Mr. E. C. Wines, appointed under the said resolution, of the congress which was held at London, together with an appendix containing a summary of the proceedings of the late National Prison Congress of Baltimore.

Respectfully submitted.

HAMILTON FISH.

The PRESIDENT.

WASHINGTON, *February* 12, 1873.

SIR: I have the honor to submit to you my report as Commissioner of the United States to the International Penitentiary Congress of London, together with an appendix, containing summary of proceedings of the late National Prison Congress of Baltimore.

With great respect, I have the honor to be, your most obedient servant,
E. C. WINES,
Commissioner, &c.

His Excellency U. S. GRANT,
President of the United States.

H. EX. 185—*

To the Senate and House of Representatives
I transmit herewith a report from the Secretary of State and upon
pending papers.

U. S. GRANT

WASHINGTON, February 12, 1875.

DEPARTMENT OF STATE,
Washington, February 12, 1875.
Referring to the Joint resolution of Congress, of the 20th March,
1871, authorizing the appointment, by the President, of a commission
to attend an International Congress on Penitentiary and Reformatory
Discipline, proposed to be held in Europe, I have the honor to transmit
herewith the report of Mr. M. O. Wines, appointed under the said res-
olution, of the Congress which was held at London, together with an
appendix containing a summary of the proceedings of the late National
Prison Congress of Baltimore.
Respectfully submitted,

HAMILTON SMITH

The President.

WASHINGTON, February 12, 1875.
Sir: I have the honor to submit to you my report as Commissioner
of the United States to the International Penitentiary Congress of Lon-
don, together with an appendix, containing summary of proceedings of
the late National Prison Congress of Baltimore.
With great respect, I have the honor to be, your most obedient servant.

M. O. WINES,
Commissioner.

His Excellency U. S. GRANT,
President of the United States.

H. H. 1875

Dr. Frey.....	137
Dr. Guillaume.....	137
Major Fulford.....	137
Mr. Wills.....	137
Mrs. Julia Ward Howe.....	137
Mr. F. Hill.....	137
Mr. Hastings.....	137
Sir Walter Crofton.....	138
General Pilsbury.....	138
Dr. Marquardsen.....	138
§ 5. Kinds and limits of instruction suited to the reformatory treatment of prisoners.....	138
Remarks of Mr. Stevens.....	138
Mr. Tallack.....	139
Mr. Merry.....	139
Mr. McFarlane.....	139
Dr. Varrentrapp.....	139
Miss Mary Carpenter.....	139
§ 6. Whether it is expedient in certain cases to employ an imprisonment consisting in mere privation of liberty without obligation to work...	139
Remarks of Count de Foresta.....	139
Professor Wladrinoff.....	139
Mr. Chandler.....	140
Dr. Mowatt.....	140
Dr. Marquardsen.....	140
§ 7. Whether sentences for life are expedient.....	140
Remarks of Baron von Holtzendorff.....	140
Dr. Wines.....	140
Dr. Mowatt.....	140
Hon. Daniel Haines.....	140
Mr. Stevens.....	140
Mr. Vaucher Crémieux.....	140
Mr. Hastings.....	140
§ 8. Whether prisoners on reconviction should be subjected to a more severe disciplinary treatment.....	141
Remarks of Mr. S. Petersen, (Bavaria).....	141
Mr. Ploos van Amstel.....	141
Dr. Frey.....	141
M. Robin.....	141
Mr. Stevens.....	141
Count Sollohub.....	141
Dr. Guillaume.....	141
Count de Foresta.....	141
Dr. Bittinger.....	142
Mrs. Julia Ward Howe.....	142
§ 9. What should be the maximum of imprisonment, cellular or otherwise, for terms less than life?.....	142
Remarks of Dr. Marquardsen.....	142
Dr. Frey.....	142
Mr. Stevens.....	142
Mr. Moncure.....	142
Baron Mackay.....	142
Sir Walter Crofton.....	142

	Page.
CHAPTER XVIII: THE PRISONER DURING HIS INCARCERATION—Continued.	
§ 10. Whether or not imprisonment should be uniform in nature, and differ only in length.....	142
Remarks of Count Sollohub.....	142
Dr. Mowatt.....	143
Count de Foresta.....	143
§ 11. Prison labor—penal and industrial.....	143
Remarks of Mr. F. Hill.....	143
Major Fulford.....	144
General Pilsbury.....	145
Dr. Wines.....	145
Mr. Hibbert, M. P.....	145
Sir John Bowring.....	145
Mr. Ploos von Amstel.....	145
Colonel Colville.....	145
Mr. Stevens.....	145
Dr. Mowatt.....	145
Dr. Frey.....	146
CHAPTER XIX: THE PRISONER AFTER HIS LIBERATION.....	146
§ 1. Best mode of aiding discharged prisoners.....	146
Remarks of Mr. Murray Browne.....	146
Mr. Powell.....	147
M. d'Alinge.....	147
Mr. Rankin.....	147
Baron Mackay.....	148
Mrs. Meredith.....	148
Rev. M. Robin.....	148
Mr. M. Browne.....	148
A member from France.....	148
Dr. Guillaume.....	148
Mr. Bremner.....	149
§ 2. Best means of securing the rehabilitation of prisoners.....	149
Remarks of Mr. Stevens.....	149
Mr. Hastings.....	149
Sir Walter Crofton.....	149
Mrs. Julia Ward Howe.....	149
Baron Mackay.....	149
Mr. Baker.....	149
Dr. Wines.....	149
Mr. Chandler.....	150
Sir John Packington.....	150
§ 3. Best mode of giving remission of sentences and regulating conditional discharges.....	150
Remarks of Sir W. Crofton.....	150
Mr. Tallack.....	150
Mr. Stevens.....	150
Mr. Chandler.....	151
Mr. F. Hill.....	151
Major Du Cane.....	151
Mr. Nevin.....	151
Dr. Frey.....	151
Mr. Hastings.....	151
§ 4. Supervision of discharged convicts.....	152
Remarks of Mr. Baker.....	152
Mr. F. Hill.....	152
Mr. Browne.....	152
M. Stevens.....	152
CHAPTER XX: MISCELLANEOUS POINTS.....	152
§ 1. Whether prison officers should have special training for their work.....	152
Remarks of Dr. Guillaume.....	152
Major Du Cane.....	153
Baron Mackay.....	153
Sir Harry Vorney, M. P.....	153
Mr. Rathbone.....	153
Major Fulford.....	153
Dr. Mouat.....	153
Dr. Wines.....	154
§ 2. Whether transportation is expedient in punishment of crime.....	154
Remarks of Count de Foresta.....	154

	Page
CHAPTER XX: MISCELLANEOUS POINTS—Continued.	
M. Pols	154
Count Sollohub	154
Mr. Hastings	154
Count de Foresta	154
Baron Von Holtzendorff	155
§ 3. Whether short imprisonment and the non-payment of fines may be replaced by compulsory labor without privation of liberty	155
Remarks of Count de Foresta	155
Mr. Tallack	155
Rev. Mr. Collins	155
Mr. Stevens	155
Sir John Bowring	155
Baron Mackay	155
Mr. Bremner	156
Baron von Holtzendorff	156
§ 4. The proper limits of the power of boards of prison-managers, as regards the administration of prisons	156
Remarks of M. Loyson	156
M. Vaucher-Crémieux	156
Colonel Ratcliff	156
§ 5. Whether the government of prisons should be placed in the hands of a supreme central authority	156
Remarks of Mr. Hastings	156
M. Ploos van Amstel	156
M. Stevens	156
Dr. Guillaume	157
Messrs. Carter and Baker	157
§ 6. International prison statistics	157
Remarks of Mr. Beltrani-Scalia	157
Count Sollohub	157
Dr. Frey	157
Dr. Guillaume	157
Professor Lione Leir	157
§ 7. The best means of repressing crime-capitalists	157
Remarks of Mr. Edwin Hill	157
Mr. Serjeant Cox	158
Mr. Chandler	158
Colonel Ratcliff	158
Mr. Aspinall	159
§ 8. Whether whipping is expedient in punishment of crime	159
Remarks of M. Pols	159
Mr. Aspinall	159
Colonel Ratcliff	159
Dr. Marquardsen	159
§ 9. Extradition treaties	160
Remarks of Dr. Frey	160
§ 10. Woman's work in prisons	160
Remarks of Mrs. Chase	160
Miss Mary Carpenter	160
Miss Emily Faithful	161
Mrs. Julia Ward Howe	161
Mrs. Lewis	161
Mr. Bremner	162
Rev. Mr. Crombleholme	162
Lady Bowring	162
CHAPTER XXI: PREVENTIVE AND REFORMATORY WORK	162
Remarks of Mr. Brace	162
Miss Carpenter	163
Mr. Foote	164
M. Vaucher-Crémieux	164
Mr. Hendrickson	164
Mr. Howe	164
M. Bournat	164
Mr. Marshall	164
Sir T. Fowell Baxton	164
Mr. Baker	164
Baron von Holtzendorff	165
Dr. Guillaume	165
Mr. Wills	165

	Page.
CHAPTER XXI: PREVENTIVE AND REFORMATORY WORK—Continued.	
Rev. Mr. Crombleholme	165
Remarks of Mr. Aspinall	165
Sir W. Crofton	165
Dr. Marquardsen	165
Mr. Ford	165
CHAPTER XXII: PENITENTIARY SYSTEMS	166
§ 1. The Irish convict system, as explained by Sir W. Crofton	166
2. The Irish borough and county prison system, as explained by Mr. Bourke and others	167
3. The English convict system, as explained by Major Du Cane	167
4. The English borough and county prison system, as explained by Captain Armytage and others	168
5. The Scotch prison system, as explained by Mr. Monclare	168
6. The Belgian prison system, as explained by Mr. Stevens	169
7. The Russian prison system, as explained by Count Sollohub	169
8. The French prison system, as explained by M. Béranger	169
9. The Swiss prison system, as explained by Dr. Guillaume	170
10. The Italian prison system, as explained by Count de Foresta	170
11. The German prison system, as explained by Herr Ekert, Dr. Varrentrapp, and Baron von Hollendorff	170
12. The Netherland's prison system, as explained by M. Ploos van Amstel	171
13. The Swedish prison system, as explained by M. Almquist	171
14. The Austrian prison system, as explained by Dr. Frey	171
15. The prison system of India, as explained by Dr. Mouat	171
16. The prison system of the United States, as explained by Mr. Chandler and others	171
CHAPTER XXIII: CONCLUDING SESSION OF CONGRESS	172
§ 1. Presentation by Dr. Wines of the Works of Edward Livingston on Criminal Jurisprudence, in English and French	172
Letters from M. Vergé, member of the institute, and Archbishop Manning on the subject of Livingston's Works	172
2. Presentation by Dr. Wines of M. Lucas's observations	173
Résumé of Mr. Lucas's views	173
3. Propositions submitted by American delegation	174
4. Propositions embodied in final report of the executive committee, and adopted by the congress as expressing its conception of the fundamental principles of prison discipline	177
Remarks of Mr. Hastings on moving the adoption of the report	178
Gov. Haines in seconding same	179
Miss Carpenter on report	179
Sir John Packington on putting motion to adopt report	179
5. Creation of permanent international prison commission	179
6. Vote of thanks to Mrs. Hastings and Pears, with remarks by Dr. Wines, Archbishop Manning, and Sir John Packington	180
7. Vote of thanks to Dr. Monat, with remarks by Mr. Aspinall and Baron Mackay	180
8. Vote of thanks to Dr. Wines, with remarks by Drs. Guillaume, Marquardsen, and Sir John Packington	180
Response by Dr. Wines	181
9. Vote of thanks to Sir John Packington, with remarks by Messrs. Hastings and Monat	181
10. Response by Sir John Packington	181
PART THIRD: PAPERS SUBMITTED TO THE CONGRESS.	
INTRODUCTORY	182
CHAPTER XXIII: *PRISONERS AND THEIR REFORMATION, BY Z. R. BROCKWAY ..	182
CHAPTER XXIV: CUMULATIVE SENTENCES, BY LIVERPOOL MAGISTRATES	184
CHAPTER XXV: TREATMENT OF PRISONERS, BY SIR W. CROFTON	185

§ 1. The prisons of Switzerland.....	216
Penitentiaries at Geneva and Berne.....	216
Penitentiary at Zurich.....	216
Penitentiary at Lenzbourg.....	217
Penitentiary at Neufchâtel.....	217
2. Reformatories of Switzerland.....	228
CHAPTER XXXIII: PRISONS OF GERMANY.....	228
§ 1. German convict prisons.....	228
(a) Convict prison at Berlin.....	228
(b) Convict prison at Bruchsal.....	229
(c) Convict prison at Munich.....	230
2. Detention prison at Munich.....	231
3. Patronage of discharged prisoners at Bavaria.....	232
System of patronage admirably organized; its organization, described in detail.....	232
Minutes of a meeting of the patronage society of Munich, August 12, 1873.....	234
CHAPTER XXXIV: PRISONS IN ITALY.....	235
§ 1. The prison delle Marate, at Florence.....	235
2. The prisons of Rome.....	235
(a) The prison delle Terme.....	235
(b) The prison of San Michele.....	235
This prison historic.....	235
Founded in 1704, by Pope Clement XI.....	236
San Michele the germ of the Auburn system.....	236
3. The future of penitentiary reform in Italy.....	236
CHAPTER XXXV: PRISONS AND REFORMATORIES OF BELGIUM.....	237
§ 1. Belgian prisons.....	237
(a) Penitentiary of Louvain.....	237
(b) Convict prison of Ghent.....	238
(c) Detention prison and house of correction at Ghent.....	238
2. Juvenile reformatories of Belgium.....	238
CHAPTER XXXVI: PRISONS AND REFORMATORIES IN NETHERLANDS.....	240
§ 1. Military prison at Leyden.....	240
2. Cellular prison of Amsterdam.....	241
3. Detention prison at the Hague.....	242
4. Aid to liberated prisoners.....	242
5. Netherlands Mettray.....	242
CHAPTER XXXVII: PRISONS AND REFORMATORIES IN FRANCE.....	245
§ 1. Two distinct prison administrations.....	245
2. Explanation of the terms <i>inculpés</i> , <i>prévenus</i> , <i>accusés</i>	246
3. Grand depot of the prefecture of police.....	246

	Page.
CHAPTER XXXVII: PRISONS AND REFORMATORIES IN FRANCE—Continued.	
4. Mazas.....	247
5. The Conciergerie.....	249
6. The Grand Roquette.....	249
7. Sainte-Pélagie.....	250
8. Saint-Lazare.....	251
9. La Santé.....	253
10. La Petite Roquette.....	255
11. The female central prison of Clermont.....	255
12. Male central prison of Melun.....	257
13. Departmental prisons at St. Omer.....	258
14. A <i>quasi</i> prison.....	259
15. General remarks on French prisons.....	259
(a) Material organization excellent—moral, languid.....	259
(b) Percentage of relapses increase rather than diminish.....	259
(c) Wards of preservation and amendment.....	260
(d) Dietaries too low.....	260
16. Agricultural and penitentiary colony of Mettray.....	260
Founded by M. Demetz thirty-five years ago.....	261
General statistics.....	261
Conducted on the family system.....	261
Advantages of this system.....	262
Agriculture the chief industry, but not to the exclusion of mechanical labor.....	262
System of training—the heart, the body, the intellect.....	263
Earnest care given to the wards of Mettray after their discharge.....	264
Mettray resembles a great and beautiful work of nature.....	264
Extraordinary results.....	265
The training school of Mettray, (<i>école préparatoire</i>).....	265
The <i>maison paternelle</i> , (house of paternal correction).....	266
Review of the <i>colons</i>	268
17. Patronage of discharged prisoners in France.....	268
Has not taken root widely.....	268
Well organized and successful as far as it goes.....	269

PART FIFTH: LESSONS, SUGGESTIONS, RECOMMENDATIONS.

CHAPTER XXXVIII: CONCLUSION.....	270
§ 1. Principles above systems.....	270
2. Evil effects of repeated short sentences.....	271
3. The character of sentences needs modification.....	272
4. The prison system of a country should be a unit.....	274
5. Stability of administration an essential condition of a good prison system.....	275
6. Series of institutions needed in a good system.....	277
(a) Preventive institutions.....	277
(b) Juvenile reformatories.....	278
(c) The county jail.....	279
(d) The house of correction.....	280
(e) The state prison.....	281
Connected with these last two classes of prisons should be intermediate or <i>testing</i> establishments.....	282
Mr. Barwick Baker's proposition on this subject.....	283
7. Crime-capitalists should be exterminated.....	285
8. Society owes indemnity to persons wrongfully imprisoned and declared innocent by the courts.....	286
9. Effective means should be devised to identify prisoners previously convicted.....	288
10. Greater attention should be given to penitentiary statistics.....	289
11. A reformatory prison discipline must work <i>with</i> nature, not <i>against</i> it..	292
12. A reformatory discipline must have a punishing stage and a training stage.....	295
13. A reformatory discipline must impart the power and the will to live honestly.....	296
14. Religion and education are essential forces in the work of reforming criminals.....	296
15. To success in this work it is essential that those who engage in it should both desire and intend its accomplishment.....	297
16. A sincere belief that it can be done is equally necessary.....	297
17. Greater use must be made of moral forces, less of physical.....	297

	Page
CHAPTER XXXVIII: CONCLUSION—Continued.	
18. Individualization an essential principle in a reformatory discipline...	300
19. Men trained to the work are needed	301
20. All possible encouragement and aid must be given to liberated prisoners who desire to live honestly	302
21. The National Government should have prisons and a prison system of its own.....	303
TRANSACTIONS OF THE NATIONAL REFORM CONGRESS OF BALTIMORE.	
I. First session.	
Opening address of Governor Seymour	307
Address of welcome, by Mr. Jones	313
Address of Mr. Kerr	314
Remarks of Mr. Hageman	317
Appointment of standing committees	318
Organization of the congress	318

REPORT.

GENERAL INTRODUCTION.

The Congress of London has passed into history. It is a fixed fact, irrevocable and unchangeable. It only remains to tell its story and gather its fruits. The first is simple, and may be quickly done; the last will be manifold, and the harvest, it may be hoped, will be gathering for years, if not for generations, to come.

In a paper read by M. Charles Lucas before the French Academy prior to the meeting of the congress, it was well remarked by that eminent and venerable man :

International congresses have been too often repeated in our day to be looked upon as facts purely accidental. There is a reason for their existence. They are the necessary consequence of the two laws of the sociability and perfectibility of man, which, at the present advanced stage of our civilization, demand the international exchange of ideas to promote the moral progress of humanity, as they do that of material products to advance the public wealth. Such congresses serve to show the condition of different nations as regards their intellectual development, in the same manner as industrial exhibitions show the comparative results of their economic development. Hitherto there have been convened congresses of governments and congresses of citizens. The first have already done good service, and it is desirable to increase their importance and their frequency in international and diplomatic relations. The second play the part of generous satellites of civilization, which, that they may give light and direction to its progress, rush to the front, sometimes rather precipitately and not in the most perfect order, but always affording a useful stimulus to human development. What stamps upon the Congress of London a character of complete originality is that it is entitled, and, in effect, is to be, a *semi-official* conference, combining the initiative of governments and of individuals. The circumstance most remarkable about it is that this semi-official character has been given to the congress by a government heretofore least disposed to interfere, in the slightest degree, with the free initiative of individuals and associations, and by a people least inclined to tolerate such interference.

This analysis of the elements composing the Congress of London is perfectly just. The congress was opened on the evening of the 3d of July, in the great hall of the Middle Temple, with an address by the right honorable the Earl of Carnarvon, a nobleman profoundly versed in penitentiary science and thoroughly active in the work of penitentiary reform. The address was able, terse, and practical—one of those model productions which give, with a Doric simplicity, “the essences of things.” Every sentence went straight to the mark; every paragraph was marked by good sense; and the whole discourse, drawn from “the well of English undefiled,” held the vast assemblage spell-bound to the end.

At the conclusion of the address Lord Harrowby offered a resolution of welcome to the foreign delegates, which was seconded by Sir Charles Adderly; and both gentlemen gave expression, in well-conceived thoughts and happy phrase, to the sentiment of hospitality with which England received the members of the congress coming from other countries.

Baron Von Holtzendorff, on behalf of the continental delegates, and the Hon. Joseph R. Chandler, on behalf of the delegates from America, replied to the welcome in terms no less graceful and eloquent than those in which it had been conveyed.

The undersigned would here respectfully submit to the President his appreciation of the character, work, and probable results of the Congress of London.

1. Twenty distinct nationalities were represented in the congress by delegates bearing commissions from their respective governments; in some cases one representative only being so commissioned, in others several. In addition to the national representatives from the United States and the German Empire, fifteen States of the former and five of the latter were also officially represented; some of them, as in the case of nationalities, by a single delegate, others by a plurality. The same was true of several of the larger of the colonial possessions of England; as, for example, India and Australia. So that altogether the number of official members with commissions from governments, could not have been less than sixty, and might have reached, and probably did, to seventy. This is a great fact, quite unprecedented in the annals of penitentiary reform.

2. Besides official members, numerous delegates were present with commissions from national committees, prison societies, managing boards of penitentiary and reformatory establishments, societies of jurists, criminal-law departments of universities, and last, though not least, the Institute of France, the most illustrious body of *savans* in the world. Between official and non-official members, that is, delegates commissioned by governments and delegates commissioned by such organizations as those named in the preceding sentence, the congress must have numbered not much, if any, less than four hundred members.

3. If the congress was conspicuous by the number of its members and of the governments and organizations represented, it was no less conspicuous by their ability and thorough mastery of the questions which engaged its study. It was a reunion of specialists—men and women largely devoted to prison-work, whether in the investigation of the principles of penitentiary science or in their practical application—and embodying, representatively, the knowledge, experience, and wisdom of the world on the subjects to which its labors were dedicated.

4. It is much that the thinkers and workers in this great cause have met in council; that they have looked into each other's faces; that they have grasped hands; and that they have felt their hearts beating, as it were, one against the other. Sympathies have thus been awakened and friendships formed, from which precious fruits will be gathered. All will go back to their respective fields, to work with greater earnestness and higher hope from the strength and courage received from such communion. Valuable correspondence and the interchange of mutually instructive documents cannot fail to be among the useful results of the acquaintances formed at this great international gathering. Another benefit will be a far more extensive international visitation of prisons; and from this will come, on the one side, a large influx into the different countries of new and in many cases fruitful ideas, and, on the other, a great diminution, if not a complete obliteration, of international prejudices.

5. An amount of information on the penitentiary and reformatory systems of different countries and their results, never, I think, heretofore collected, and certainly never before presented in one view, is among the most precious results of this congress. The greater part of the governments represented handed in carefully-prepared official reports in response to a series of questions submitted to them by the undersigned, and the information thus offered, wide and valuable as it is,

was most usefully supplemented by facts communicated and statements made by delegates on the floor of the congress. It would be difficult to exaggerate the value of such a mass of information, coming, as it does, from the most authentic sources, and, by consequence, clothed with an authority with which it could not have been otherwise invested.

6. The vast fund of precious information thus accumulated will be diffused, through the agency of the congress, to the utmost limits of civilization. It is to be presumed that the official delegates will all make reports to the governments by which they were commissioned, all of which reports will, no doubt, be published among the archives of the governments to which they are made, and will thus not only be circulated among the people of all civilized countries, but will come under the special notice of the makers and executors of the laws of those countries.

But this is not all. The numerous non-official delegates will, beyond a doubt, in a thousand different forms and through as many several channels, make report of the doings of the congress to their respective constituencies; and the press of all nations—so keen in its scent of news, so prompt to catch and crystallize all forms of thought, so potent for good as well as for evil, and, to its praise be it said, so ready, in the main, to lend its powerful aid to every worthy cause—will echo and re-echo these many voices to the very ends of the earth. What imagination can grasp the amount of good which will, in this infinite variety of ways, be accomplished through the congress, or forecast the progress thence likely to result in a department of social science second in importance to no other in the whole field of social investigation?

7. The congress has given, or is destined to give, an immense impulse to the cause of prison-reform. On this point it is enough to refer to what has been written above, and to state that the evidences of a newly-awakened interest in penitentiary questions, and of a strengthened purpose to seek their just solution, are visible on every side.

8. It is not to be disguised that the summoning of such an assemblage as that of the late Congress of London was a hazardous experiment. It was, from the start, encompassed with dangers as well as difficulties; and a peril far from inconsiderable, and awakening no little anxiety, and even some alarm in my mind, developed itself in the progress of its labors. Representatives from more than twenty different nationalities, coming together literally from the ends of the earth, for the study of problems at once so important and so perplexed as those comprehended in the field of penitentiary science, could not fail to develop a good deal of difference of opinion, which might become so sharp as to end in a violent disruption of the body. This is the peril referred to above as having actually presented itself—rather, however, to those who were more in the inner circle than to the ordinary observer. But by moderation and prudence the danger was averted, and the congress was, in the end, able to announce a series of propositions of the highest importance, embodying its conception of the cardinal principles of prison discipline. They are substantially those adopted by the Congress of Cincinnati, in 1870. This was a great result; and the whole world may, it seems to me, be congratulated on such a conclusion to the labors of the Congress of London. The propositions announced will enter as seed into the public opinion of the world, and can hardly fail, in due time, to make themselves felt in improved systems of criminal law and prison discipline. Indeed, Professor Marquardsen, of Bavaria, a distinguished member of the German Parliament, publicly declared his conviction that the new penal code for the German Empire, now under consideration

by the Parliament, would be materially improved through the labors of the congress.

9. The congress will have made a contribution of great value to the literature of penology. Its volume of transactions will embody: 1, the official reports of governments on the penitentiary systems and administrations of their respective countries; 2, the discussions had on the numerous and important questions which came before the body for its consideration, taken down at the time by competent reporters; 3, the papers submitted to the congress by distinguished specialists in different countries, most of them of remarkable ability, breadth, and power.

10. Another admirable result of the congress is the creation of a permanent international committee, charged with important functions in the interest of international prison reform, and more particularly with the duty of seeking to secure greater uniformity and trustworthiness in international prison statistics. The committee is constituted as follows: Dr. Wines, United States, chairman; Signor Beltrani-Scalia, Italy, secretary; Mr. G. W. Hastings, England; M. Loyson, France; Dr. Guillaume, Switzerland; Mr. Stevens, Belgium; Mr. M. S. Pols, Netherlands; Dr. Frey, Austria; Count Sollohub, Russia; and Baron Von Holtzendorff, Germany. This committee will hold its first annual meeting in Brussels, Belgium, in the month of September, 1873. Doubtless one of the most important questions that will then come before the committee will be that of calling another international penitentiary congress, and if that question be decided affirmatively, the duty will arise of fixing the time and place for holding it, and of determining the bases on which it shall be organized and conducted. It may be hoped that this committee will form a kind of central bureau, to which intelligence relating to prison reform, and the progress made therein, will be communicated, year by year, from all parts of the world, and from which, in a condensed and digested form, it will be again distributed to every region of the globe. Thus every part of the world will be kept informed of what is doing in every other part in reference to this vital interest of society. In this way a continual circulation of ideas on penitentiary questions will be maintained; the nature and result of experiments undertaken in any given country will be speedily made known in every other; and an honorable rivalry will be kept up between nations, in which each, while rejoicing in every instance and at every proof of progress elsewhere, will yet strive to outstrip its fellows in the race of improvement.

11. Three great national commissions have already grown, not, indeed, out of the congress, but out of the movement for the congress, having been created before the body itself assembled, but not before the proposition for it had been submitted to the governments by which the commissions have been inaugurated. The first is a royal commission for Italy, named by the King last autumn, on a report submitted to him by the prime minister, Mr. Lanza, after an interview had with him by the undersigned, and expressly based on what passed at that interview. The second is a legislative commission for France, created by the National Assembly, in pursuance of a report submitted to that body by the Viscount d'Haussonville and an act passed on his motion early last winter. The distinguished member avowed, in terms, that his report and motion grew out of the proposition for the Congress of London, and that the labors of the commission were, in part, intended as a preparation for that assemblage. The third is an imperial commission for Russia, named by decree of the Czar last spring. The first two of these commissions, namely, for Italy and France, have, for object, penitentiary

reforms in those countries. The third has been created with a view, not of improving an existing prison system, but of devising one entirely new, for a vast and powerful empire. They are all composed of eminent citizens, chosen on account of special fitness for the work to which they have been called. The French commission is formed, in one respect, on the model of the congress; that is to say, it combines the official and non-official elements, which, as M. Lucas has shown, gave a character of special originality to that body. The act created a commission of fifteen members of the Assembly, with authority to associate in their labors such other persons, from outside the legislative body, as they might deem proper to invite. The commission is actually constituted of fifteen members of the Assembly and fifteen private citizens summoned to their aid.

12. The Congress of London has made easy the holding of future congresses of the same kind, since all agree that it has been a success, and all unite in the desire that others, with similar aims and objects, should follow, and, indeed, that a character of periodicity should be given to them. But, more than this, it has taught us how to prepare for and conduct them in such a way as to derive the highest advantage from their labors.

The appreciation of the congress and its labors, contained in the foregoing paragraphs, is shared by many eminent men in Europe, as correspondence, had with them by the undersigned since its sessions were closed, abundantly attests. I venture, in proof of this, to offer a single extract from one of the letters received within the period referred to. It is from Mr. M. S. Pols, one of the official delegates from Holland, who took rank, by common consent, among the most intelligent, industrious, and useful members of the congress. Mr. Pols says:

I received a copy of the London Times containing your letter, and on nearly all points fully concur with you in opinion. I never expected any direct result from the congress, nor do I believe such to be the case with any congress not specially convoked for the solution of a distinctly stated question. The great aim of such congresses is to stir public opinion and to give it a mighty impulse in some direction. This aim, I believe, has been fully attained by the London congress, and as I believe that public opinion rules the world, not only in free countries, like yours and mine, but even in states seemingly directed by an uncontrolled executive power, the indirect results of the congress will soon appear, and our (or, as I do not hesitate to say, your) work will be proven not to have been fruitless. The thoroughly practical and scientific character of the proceedings, the earnest, and on many points exhaustive discussions, and the unanimous accord finally reached concerning so many great and important principles of penitentiary discipline, insure its success, which will prove the greater, as it will be won by instillation and not by strong measures, too soon in general counteracted by reaction. Nor do I think it one of the least remarkable results of the congress that men, so widely diverging as to the means of working out common principles, have met one another without any quarreling or personal strife, but, without an exception that I am aware of, have shown the greatest esteem for their strongest antagonists, the largest toleration for adverse opinions. The absence of petty jealousies and personal vanities insures, as I believe, an impartial and broad consideration of the rival systems.

The report which the undersigned has the honor now to submit to the President will consist of five parts, as follows:

Part First will present a complete *résumé*, arranged in subjects, of the information furnished in the official reports submitted to the congress from the different countries, thus giving, at a glance, a comparative view of the present state of prison discipline and the progress of prison reform in the leading nations of the world.

Part Second will review and condense the proceedings of the congress, giving the gist of the debates and the main currents of opinion and argument developed in them.

Part Third will contain some notice of the papers offered to the congress, with an analysis of a portion of them.

Part Fourth will embody the results of the personal observations and inquiries of the undersigned in relation to the prisons and reformatories of Europe.

Part Fifth will deduce, from all that has gone before, its appropriate lessons, and state them in the form of suggestions and recommendations.

PART FIRST.

STATE OF PRISONS.

CHAPTER I.

PRISON SYSTEMS.

§ 1. Austria has three classes of prisons, those for male and female prisoners being distinct establishments, viz: 1, prisons for persons sentenced to more than one year of imprisonment; 2, prisons for persons sentenced to less than one year; 3, prisons of the district-courts for minor offenses. Of the first class, there are eighteen, with a mean population of 10,490; of the second class there are sixty-two, with an average population of 7,103; of the third, neither the number of prisons nor the population is given.

The proportion of male prisoners to female in prisons of the first class is as five to one, and in prisons of the second class as six to one.

Until quite recently the associated system of imprisonment alone existed in Austria. Since 1867 all new prison constructions have been arranged in such manner that associated imprisonment may be combined with cellular; so that, excepting short imprisonments, which, it is held in Austria, ought to be wholly cellular, every prisoner should, as a rule, spend at least the first eight months of his imprisonment in a cell, and the remainder in association, under conditions of proper classification, and a consequent gradually improved treatment and a gradual preparation for liberty. Several prisons of the first class have been built or are in process of construction upon this plan, in which, nevertheless, it is intended that one-third of the inmates shall undergo their entire punishment in cells, and that the other two-thirds, after eight months of cellular confinement, shall pass into the state of association and enjoy the benefits of a progressive classification. One prison only of the second class has thus far been arranged on this plan.

The considerations which have prompted this change are that collective imprisonment, carried through the whole sentence, has been found by experience incompatible with individual treatment, and consequently obstructive as regards the moral improvement of the prisoner, particularly in the old and ill-constructed country prisons, so that many are made worse instead of better by their imprisonment. On the other hand, the system of absolute isolation has been attended with this disadvantage, that it makes the prisoner weak-willed, especially if the confinement is long continued. It incapacitates him to meet successfully the temptations that beset him on his return to liberty. Difference of culture is also found to give a wide difference of result in the application of the cellular system, and many prove, on trial, wholly unfitted for isolation. On these grounds it has been judged wisest to choose a middle course, and combine the two systems.

In prisons where the associated system is followed there exists a classification of prisoners in the dormitories. Youthful criminals, especially, are kept as much as possible from old and hardened offenders;

and educated prisoners are not, if it can be avoided, placed with the ignorant, the rude, and the base. The opinion is expressed in the report that the same classification should be (whence the inference is plain that it is not) extended to the time and place when and where the prisoners take their exercise. It is further declared that the basis of classification should be age, education, state of mind, former life, degree of guilt, and the crime committed; a principle which, in the opinion of the undersigned, cannot, in regard to most of the particulars named, be applied with any great degree of certainty, and which, because of its arbitrary character, would be of little value if it could.

There are two kinds of sentence in Austria, viz: to simple or strict *imprisonment* for serious offenses, and to simple or strict *detention* for those of a lighter character. The punishment of imprisonment draws after it the obligation to wear the prison garb, to submit to the prison fare, and to perform the allotted work. Political prisoners are absolved from compulsory labor and from the prison dress, which last exemption is also accorded to prisoners sentenced to simple imprisonment.

The punishment of strict detention involves a treatment conformed, in respect of food and labor, to the prison regulations, but the prisoner is excused from wearing the prison dress and the work given him is of a lighter character.

Simple detention is for persons under arrest, and means merely the safe-keeping of the prisoner, who has the right to choose his own occupation and, if he be so disposed, to provide his own food.

A singular adjustment of the relative duration of cellular and associated imprisonments has place in Austria. A recent enactment provides that, after the lapse of three months passed consecutively in isolation, every period of two days so passed shall count as three in the term of his sentence. Another provision of the same act limits cellular imprisonment to three years and forbids the application of that system to prisoners sentenced for life.

The funds for the support of the prisoners come from the state. Here and there, however, there exist small endowments in land or money, the revenues of which are applied to that purpose. In Vienna there is an old arrangement, by which all theaters and public exhibitions must contribute an annual fixed sum, of which half is paid for the relief of the poor and the other half to the prison-funds of the province of Lower Austria. The prisoners are by law obliged to pay the actual cost of their keep out of their own property. That part which goes to the state is set off against the amount received for prison labor. In the year 1869, the sum paid to the state as the product of prison labor amounted to only the fifteenth part of the sum spent on prisons by the government.

The directors and officers of the prisons of the state receive, when incapacitated, the same pensions as its other servants. These pensions are: After more than ten years of service, one-third; twenty years, one-half; thirty years, two-thirds; forty years, the whole of their last salary.

If an officer before serving ten years becomes incapacitated he receives, once for all, a sum of money equal to his last year's salary. If he has become incapacitated by the service, as, for example, if he become insane or blind, he receives a pension of one-quarter or more, according to circumstances, of his last year's salary.

§ 2. The statement in the report submitted on the part of Belgium, in relation to the classification and number of prisons in that kingdom, is not perfectly clear. From its terms there would appear to be but two general classes of penal establishments, or three, including those for

juveniles, viz: 1, central prisons, corresponding to what among us are known as state-prisons; 2, houses of arrest (called provostal when designed for the safe-keeping of military prisoners), which are found near all tribunals of primary jurisdiction and all courts of justice, for the custody of persons awaiting examination or trial, and also for the punishment of prisoners convicted of minor offenses; 3, houses of refuge for juveniles, of both sexes, acquitted as having acted without knowledge, but placed under the care of the government for a certain period, to be educated and trained to industry and virtue.

The cellular system carries by far the larger number of voices in Belgium, and has the high honor of counting, in that number, its ablest and most earnest living defender, M. Stevens, inspector-general of prisons for the kingdom. Of the twenty-six prisons in Belgium, eighteen are conducted on the cellular system, and of the six congregate-prisons four are undergoing alterations to adapt them to the system of separate imprisonment. The report submitted to the congress by the Belgian authorities states that the legislature has given its preference to the cellular system, because it renders repression more efficacious and because the reformation of the convict is thereby better insured. The results claimed for the system in that country will be more fully set forth in Part Second of this report.

The number of prisoners confined in the Belgian prisons is not given; but the two sexes are stated to be represented in the proportion of 88 per cent. of men and 12 per cent. of women.

There are three kinds of sentence pronounced by the tribunals of Belgium, viz, to imprisonment, to reclusion, and to hard labor. Sentences to simple imprisonment are from eight days to five years; sentences to reclusion from five to ten years; to hard labor from ten to twenty years or for life. The report states that the difference in the treatment of prisoners sentenced to hard labor consists in this, that the first are confined in houses of correction, the second in houses of reclusion, and the third in convict-prisons. This statement is by no means clear, and the obscurity is increased by the fact that, in the enumeration of prisons, as given in a previous part of the report, no mention is made of either houses of correction or houses of reclusion.

In the congregate penal prisons the prisoners are divided into three classes. The lowest class comprises those whose antecedents are the most unfavorable and whose conduct is bad. This class bears the name of punishment-division. The middle class comprises prisoners whose antecedents, without being decidedly unfavorable and their conduct absolutely bad, have, nevertheless, need to be subjected to a probation, longer or shorter, before being definitively classed. This class has the name of probation-division. The third is composed of prisoners who, by their antecedents or their good conduct in the penitentiary, have claim to a special distinction. This class bears the name of recompense-division.

These three classes, although subjected to the same *régime* and the same exercises, are nevertheless the objects of special distinctions. In order to be able to recognize the prisoners who belong to each, a distinctive mark in the clothing is adopted for each division. The prisoners of the punishment-division are subjected to the most painful labors, are deprived of the *cantine*, and suffer various privations, especially that of visits from and correspondence with the outside, except in urgent cases, which are left to the judgment of the director. The passage from one division into another is determined by the administrative commission, on the proposal of the director. To this end the records of

conduct and of punishment are consulted. The examination for classification takes place during the first third of each year, unless oftener made necessary by exceptional circumstances resulting from overcrowding in one or other of the sections.

The numbers of the prisoners assigned to each division are inscribed on a roster suspended on the wall.

The first classification is made by the director according to the known antecedents of the convict on his entrance, the circumstances revealed on the occasion of his conviction, and the notes which are forwarded by the courts. The results of this system of classifying are not stated, but there is an implication that they are not particularly remarkable in an opinion expressed to the effect that, "to obtain solid results in a disciplinary and moral point of view, it would be necessary to appropriate special wards to the different classes."

The funds needed for the support of the prisoners are derived from the same source as the funds required for the support of the other departments of the public service. The cost of each day's support is counted in gross, without taking account of the product of the prison labor, which is turned over to the treasury. The value of this labor is not stated.

The pension granted to prison-officers who have become incapacitated, before the proper time for retirement, for a further discharge of their duties, is regulated on the footing of the average salary of their last five years of service. The pension allowed them on retiring is the same as that allowed to all the other functionaries of the government.

§ 3. In Denmark there are two general classes of sentences, viz, to imprisonment and to hard labor. There are three kinds of imprisonment: 1, imprisonment from two days to two years, during which the prisoner, though restrained of liberty, is permitted to procure whatever comforts he can by his own efforts; 2, imprisonment on common prison-fare from two days to six months, during which the prisoner is subjected to the discipline of the prison and restricted to the prescribed prison fare; 3, imprisonment on bread and water from two to thirty days. These punishments are undergone in the same buildings where persons not yet sentenced are detained. Every jurisdiction has its jail, the whole number in the kingdom being ninety-three. They vary greatly in size, that in Copenhagen having accommodations for more than two hundred inmates, while the smaller ones can receive only from four to six. The ordinary number of persons, in the whole country, who are either awaiting trial or sentenced to imprisonment in jail, is about five hundred. These jails are constructed and maintained at the expense of the jurisdiction in which they are situated. By far the greater part are of recent construction; and as none can be built or materially altered without an approval of the plan by the ministry, the same principles of construction are realized with respect to all. The law requires that imprisonment in the jails be cellular, unless positively forbidden by the medical officer. Consequently all the cells in the more recent constructions are for single persons, and contain about 800 cubic feet of space.

Sentences to hard labor are of two kinds, viz, to "labor for ameliorating" and "labor for punishing." Sentences of the first class, from eight months to six years, are undergone in houses of correction. The imprisonment is cellular, but, with deductions from the terms of sentence, expressly on the ground of the isolation of the prisoner increasing in proportion to the length of the sentence. Thus a nominal sentence of eight months is reduced to six, and one of six years to three and a half, this latter being the longest period permitted by the laws of

Denmark for punishment in separate cells. The persons sentenced to this denomination of labor are either, first, those who have committed a slight offense or, at least, a crime not so great as to receive a sentence of more than six years; or, secondly, those who have not been previously convicted; or, thirdly, young criminals, not exceeding twenty-five years. They are, consequently, without exception, persons whose moral regeneration may be hoped for.

Sentences to hard labor of the second class, ranging from two years to life, are undergone in prisons on the Auburn plan, the prisoners being together in the daytime, but separated at night. The prisoners so sentenced are divided into two classes. The first receive sentences of two to six years, being persons of a more advanced age, or who have been punished before. Their crimes are not great, but their moral vigor is broken. They form the fixed stock of the prisons, inveterate thieves, an assemblage of persons wretched and enervate, as well in a moral as in a bodily point of view; ruined by idleness, drink, and debauchery. The second class receive sentences from six years to life. They have the name of "great criminals," but, though the crime committed may be grave, it does not follow that it has necessarily sprung out of a thoroughly corrupted nature; on the contrary, it often stands solitary and has been committed in a momentary passion or under great mental depression.

For criminals sentenced to "hard labor for ameliorating," there is one prison (male) on the cellular system. For those sentenced to "hard labor for punishing," there are three, (two male and one female,) all on the associated plan. However, as there is but one prison for women, it contains prisoners sentenced to "ameliorating" as well as to "punishing labor;" but the former are treated on the cellular, as the latter on the congregate, principle. The four prisons have accommodations for an aggregate of seventeen hundred inmates. The average number is about twelve hundred, and the proportion of women a fraction over 12 per cent.*

While I am writing this report, a letter reaches me from Mr. Bruün, in which he says that his first work, after his return from London, was to draw up, on the request of the ministry, a proposal touching the manner of carrying into effect the punishment in the congregate prisons, based on the resolutions formed by the congress.

§ 4. The prisons of France are comprehended in six classes, to wit: 1, penal colonies; 2, central prisons; 3, departmental prisons; 4, establishments for the correctional education of juvenile delinquents; 5, chambers, or depots of safe-keeping; 6, prisons for the army and navy.

Formerly, persons sentenced to hard labor received their punishment in galleys. There remains but one establishment of this kind at present, the bagnio at Toulon. The galley-prisons have, since 1854, been replaced by transportation to penal colonies. Of these there are three, viz, in Algeria, in Guiana, and in New Caledonia—an island of Oceanica—the latter being the most important and the most hopeful. The colony of New Caledonia was created in 1864. This island offers, by the salubrity of its climate and the fertility of its soil, conditions propitious to transportation. The transportation of women is authorized by the law, in view of marriages to be contracted with the convicts after their provi-

* The official report from Denmark being very brief, I have supplemented the information given in it by recourse to a paper on "Prison-Discipline in Denmark," prepared for the Cincinnati congress by Mr. Bruün, supreme director of prisons in Denmark.—E. C. W.

sional or definitive liberation. The administration selected, from among the female prisoners of every class, those who expressed a desire to profit by these arrangements. These women are placed, to undergo their punishment until their provisional or definitive liberation, in a special establishment at Maroni, under the supervision of the religious ladies of Cherry. The majority of females, however, sentenced to hard labor still undergo their punishment in the central prisons of the continent.

The central prisons of France correspond to the state prisons in the United States. Their legal designation is "prisons of hard labor and correction." They receive three classes of prisoners, viz, women of all ages and men of the age of sixty and upward, persons sentenced to reclusion, and persons sentenced as correctionals to an imprisonment of more than a year.

The departmental prisons are so called, not only because they are devoted to the exclusive service of the departments in which they are placed, but still more from considerations of property and maintenance; they have also the name of houses of arrest, of justice, and of correction. These prisons receive the arrested; the accused; the correctionals sentenced to one year and less; persons sentenced to severer punishments who are awaiting their transfer; police prisoners; persons imprisoned for debts in matters criminal, correctional, of simple police, and of *fisc*; juvenile prisoners, whether arrested, accused, or committed in the way of paternal correction, and civil and military prisoners *en route*. In general, the three houses are but three distinct wards in the same establishment, although, to answer the intention of the law, the house of correction, as being a place of punishment, should be distinct from the other two.

The establishments devoted to the correctional education of juvenile delinquents receive minors of both sexes of sixteen years and under. These will be considered more at length under another head.

The name of chambers for safe-keeping is given to places in which are received prisoners who are being conveyed from point to point in localities where there is no house of arrest, of justice, or of correction. These chambers and depots have the same destination as such houses, and are but places for the temporary confinement of prisoners *en route*.

The military prisons need not be described in this report.

The cellular system is not applied in any central prison. The discipline of these prisons is that of detention in common with the obligation of silence. Some of them, however, have cellular wards, in which may be confined certain classes of prisoners.

Out of four hundred departmental prisons, fifty are constructed on the cellular system; but even in these, or at least a large proportion of them, it is the edifice only which is cellular, the system being in reality that of association by day, while separation is restricted to the night; so that no attempt is made in the report from France to establish a comparison of the results yielded by the two systems. The report declares that the results obtained by the existing system are far from being satisfactory. More than 50 per cent. of the male prisoners and about one-third of the women discharged from the central prisons fall back into crime. The report strenuously advocates the abandonment of the *régime* in common, so far as the arrested, the accused, and persons sentenced to short imprisonments are concerned.

The part contributed by the labor of the prisoners toward the cost of maintenance is placed at 50 per cent. in the central prisons and at 17 per cent. in the departmental prisons, the deficiency being made up from

the public exchequer. Some of the central prisons, however, do much better than this. In one of the female central prisons it has been possible entirely to withdraw the subsidy granted by the state, the earnings of the prisoners being sufficient for the support of the establishment. In another central prison the earnings more than defray the cost, and in several that result is approached more or less nearly. It is hoped from these examples that the administration will at length attain the end which it has always sought in this regard—that of exempting the treasury from the personal expenses of the prisoners who are confined in its great prisons for punishment.

The difference between sentences to simple imprisonment, to reclusion, and to hard labor, which are the three kinds of sentence known in France, is thus explained: Simple imprisonment is a correctional punishment, its duration being for six days at least and five years at most. It is undergone in a departmental prison if its duration falls within a year; if beyond that, in a central prison. Reclusion is a punishment afflictive and infamous. The sentence to it, which is from five to ten years, is always served in a central prison. It implies the loss of civic rights. Hard labor is an afflictive and infamous punishment. A sentence to it for life involves civic degradation and civil death. The sentence which imposes the punishment of hard labor is printed and posted in the central city of the department, in the city where the sentence was pronounced, in the commune where the crime was committed, and in that of the domicile of the convict. Criminals sentenced to hard labor for a limited term are, at the expiration of their sentence and during their whole life, legally under the supervision of the police.

Classification of prisoners has been practised to some extent both in the departmental and central prisons; but, apparently, it has not been such as to lead to solid results. An experiment, however, of great interest, was inaugurated a few years ago in this direction. Wards, to which has been given the name of wards of preservation and amendment, have been established in many central prisons, and appropriated to persons sentenced for a first offense, committed under the influence of a sudden impulse or of some violent momentary passion. This experiment promises the best results. The prisoners placed in these wards have shown themselves sensible to the distinction of which they have been made the object and have exerted themselves to justify it by their good conduct. The cases are extremely rare in which it has been found necessary to put them back into the common ward.

The different agents of the penitentiary administration are subject, as regards their retirement and the pension that may be granted them, to the rules embodied in the law of the 9th of June, 1853, relating to civil pensions. The principle laid down by this law is that every public functionary, paid directly from the funds of the state, has a legal claim to a retiring pension, when he fulfills the required conditions of age and of continuance in the service, that is to say, when he has attained the age of sixty and has accomplished a service of twenty years. It is important to remark that account is made of military services when there are super-added to them twelve years, at least, of civil services. Moreover, a pension can be granted at fifty years of age, and after twenty years of service, to those who have become incapacitated from a longer discharge of official duty by grave infirmities resulting from the exercise of their functions. In short, this same law relieves from every condition of age and continued service, 1, those who may have been disabled from continuing their service, whether as the result of an act of devotion in some public interest, or in exposing their own life to save the life of one

of their fellow-citizens, or as the result of a struggle or combat encountered in the discharge of their duties; 2, those to whom a grave accident, resulting, notoriously, from the exercise of their functions, shall have made it impossible to continue them.

§ 5. The German Empire was represented by a delegate named by the central government, but no report was submitted on behalf of the whole empire. Five states, however—Baden, Bavaria, Prussia, Saxony, and Württemberg—submitted reports each for itself.

(1) There are four classes of prisons in Baden: Houses of correction; central prisons, of which, however, there is but one; district-prisons; and fortresses.

Prisoners sentenced to hard labor are placed in houses of correction; prisoners sentenced to more than six weeks of imprisonment are placed in the central prison, and those sentenced to less than six weeks in district-prisons. The district-prisons are also used for the safe keeping of persons awaiting trial. There is one prison of this kind for each of the fifty-three district-courts of the grand duchy. The report does not state what class of criminals are sentenced to fortresses, but simply that the number of such is small. It further states that the punishment of those thus confined, as well as of the inmates of district prisons, is simply privation of liberty, the prisoners being free as to the choice of food and occupation.

The punishment of prisoners confined in houses of correction and in the central prison is undergone in cells, as is also the imprisonment of persons under arrest. Certain restrictions, however, have place as regards the infliction of imprisonment on the cellular plan. It cannot be extended, contrary to the prisoner's wish, beyond three years; nor can it, if he be between the ages of twelve and eighteen years and if he object, be applied beyond a maximum of six months. Those who object to this kind of imprisonment beyond the terms named above, and those who are pronounced by the medical officers unfit for it, are treated on the plan of association; nevertheless, they are associated only during the hours of labor; and they are, as far as possible, classified for distribution in the work shops according to their personal qualities, and in a manner best suited to promote their moral amendment.

The results of the cellular system have been favorable, and so have those of the congregate system when it has been organized and carried out on right principles.

The number of prisoners confined, January 1, 1871, and which probably represents about the average, was: Houses of correction, 303; central prison of Bruchsal, 441; district-prisons, under sentence, 198—awaiting trial, 227; total, 1,169. Of these, 85 per cent. were men and 15 per cent. women.

The support of the prisons is derived from three sources, viz: 1, payments by prisoners who have property; these amount to very little; 2, the labor of the prisoners; 3, subsidies by the state.

The gains from prison-labor differ materially, according to the duration of the punishment, the kind of prison, and the number in each. The product of the trades carried on in the cellular prison of Bruchsal has sometimes sufficed to pay the whole expense of the establishment, with the exception of the salaries of officers; and for twenty years it has, on the average, paid considerably more than two-thirds of the current expenses of the prison.

To superior officers, on retirement from service, there is granted an annual pension equal to four-fifths of their salary; to the inferior, equal to one-half.

(2) The classification of the prisons of Bavaria is as follows: 1, houses of correction; 2, prisons for adult criminals sentenced for a term exceeding three months and for juvenile delinquents for a term exceeding one month; 3, district-prisons of courts of justice for adult criminals sentenced for less than three months and for juveniles sentenced for less than one month.; 4, police prisons for persons arrested and held for trial.

There are distinct prisons for men and women of the class called houses of correction; in other prisons the two sexes are placed in different parts of the establishment.

For persons convicted of crimes against property—theft, fraud, robbery, obtaining money or goods under false pretenses, extortion, receiving stolen property, &c., and sentenced to a term exceeding three months—special prisons are provided, to which no other prisoners are sent.

Bavaria has four cellular prisons. One of these only is for sentenced prisoners; the other three for persons awaiting trial. All the other prisons of the kingdom are on the congregate plan.

Cellular imprisonment has existed for only a few years in Bavaria, and consequently (the report states) accurate data touching its effect cannot be given. But the system of isolation, it is added, gains adherents daily, because of the evil effects of the collective system as there practised.

The classification of prisoners is not carried to any great extent; yet the governors must keep prisoners of average good conduct apart from those who give little hope of improvement and whose example would exert a hurtful influence on others.

The funds for the support of the prisons are derived from the products of prison-labor, from fines, and from the public chest. The first of these sources yields 16 to 18 per cent. of the cost; the second, 28 to 32 per cent.; and the state pays the balance.

The pension, on retirement, is regulated by the length of service. If retirement becomes necessary within the first ten years, it is seven-tenths of the salary; if within the second ten, eight-tenths; if within the third ten, nine-tenths; and after forty years of service, or after the officer has reached the age of seventy, the pension is the entire salary.

(3) The prisons of Prussia are: 1, prisons exclusively for hard labor, 29; 2, prisons for imprisonment and simple detention, 15; 3, prisons of a mixed character, 11; 4, houses of correction for the punishment of slight offenses, 16; total, 71. They will hold 26,500 prisoners. Forty-seven prisons are provided, to a less or greater extent, with cells for separate imprisonment day and night, the whole number being 3,247.

There is but one prison organized exclusively on the cellular system. There are, altogether, only 2,000 separate cells for isolation at night, a number (the report says) wholly insufficient, but it is increasing daily by new additions.

There is no sensible difference between the two systems as regards reformatory results. The number of relapses has not been diminished by cellular treatment. Yet some remarkable reformations, even of hardened criminals, have been accomplished by cellular imprisonment, concerning which a doubt is expressed whether they could or would have been effected by imprisonment in common. The effect of cellular separation upon prisoners during their incarceration is said to be decidedly favorable, and, in the comparison, superior to that of associated imprisonment.

The punishments awarded by virtue of the penal code are: 1, hard

labor, the severest—inflicted for life or for a time; minimum one year, maximum fifteen—draws after it compulsory labor, without restriction of kind or place, and various civil disabilities; 2, simple imprisonment—maximum five years; no compulsion to work outside of the prison or at occupations not in accord with the capacity of the prisoner and with his previous social position; 3, imprisonment in a fortress—inflicted for life or a time; maximum, in the latter case, fifteen years—is a simple privation of liberty, with supervision over the prisoner's occupation and mode of life; 4, detention for trifling offenses—maximum six weeks—consists in a simple privation of liberty, but may be intensified by compulsory labor, when inflicted for vagrancy, begging, or professional prostitution. The minimum imprisonment under the last three kinds of sentence is one day.

The classification of prisoners in Prussia goes little further than the separation of the younger from the older criminals.

Prison officers rendered incapable of further service receive a pension, whose amount is regulated by the laws regarding the retiring allowances of all other state officers. To gain a right to a pension, ten years must be served: the pension increases with each additional year of service. It can, however, never exceed three-fourths of the salary.

(4) The prisons of Saxony are divided into the following classes: prisons for severe punishment, 2; prisons for less severe punishment, 3; prison in fortress, 1; reformatory prisons, 5; prisons belonging to courts of justice, (number not stated); prisons belonging to police courts, (number not stated.) The average number of criminals for 1871 was: In the first class of prisons, 1,153; in the second class, 1,001; in a fortress, 1; in reformatories, (otherwise called houses of correction,) 684; in the fifth and sixth classes, 1,800; total, 4,639.

For more than twenty years there has been in Saxony a conviction that sentences of imprisonment should be undergone only for the expiation of crime, the protection of society, and to deter the prisoner from the commission of subsequent offenses. The Saxon government has, therefore, two principal objects in its penal system: the satisfaction of justice and the reformation of the prisoner.

Since 1850 the penitentiary of Zuickau has been specially distinguished by a successful application of the principle of reformation by means of individual treatment. The Saxon government was in consequence induced to extend the same system to all its prisons. The government more readily placed confidence in the new method, because it works by no complicated apparatus, complies with existing circumstances, is based upon the principle of individual treatment, and so combines different modes of imprisonment as to gain the best results. Thus, the common modes of imprisonment and treatment are excluded; and, just as a physician prescribes suitable medicine and diet for his patients, so the administration provides fit education, work, and food for its prisoners. The penitentiary of Zuickau gave proofs that this idea was not only theoretically right, but also practicable. The government, therefore, in 1854, resolved that all the Saxon prisons should adopt the new regulations for internal management and the treatment of prisoners. Accordingly, there is in Saxony no penitentiary where either solitary or collective imprisonment is exclusively employed; both modes are used, according to the prisoners' individual wants. Saxony has eleven prisons where, especially during the last ten years, the reforms mentioned above have been carried out.

(5) The prisons of the grand duchy of Würtemberg are: Prisons of reclusion, 4; country prisons, 3; fortress, 1; prison for minors, 1; dis-

trict prisons, (number not stated.) Of the first class, two are exclusively for men, one exclusively for women, and one for prisoners of both sexes. Criminals sentenced to reclusion and hard labor are placed in these establishments. In the second class, sentences for minor offenses are undergone, the maximum of the imprisonment being for four weeks. The district prisons are mainly for persons under arrest, but minor offenders are also punished in them for a term not exceeding four weeks.

The congregate system of imprisonment, with common dormitories, still prevails in Würtemberg, although cells for isolated detention are found in all the prisons, some of which are used for separation at night and others for purposes of discipline. But it has been resolved to make trial of the cellular system, and to that end a special prison has been erected at Heilbronn, which is expected soon to be opened for the reception of prisoners.

The expense of maintaining the prisons, so far as it is not defrayed by the industrial labor and payments of the prisoners, is borne by the state, which, on the average, contributes about 35 per cent. of the total expense of prisons; the remaining 65 per cent. is derived from the income of the prisons themselves, but the prisoners' payments form only a small part of the amount. What comes from the prisoners is mostly the result of their labor.

§ 6. The official report on the prisons of Italy commences with an explanation of the circumstances of the country. The various provinces of the Italian peninsula, divided for centuries into so many different states, at length united under the house of Savoy, brought with them to the union, each its own laws, institutions, and traditions. It is, therefore, not to be wondered at that there should be found in Italy a wide diversity in penal legislation, and, consequently, great variety in the punishments adopted and in the mode of carrying them out. Thus, the law of the Tuscan provinces had abolished capital punishment since 1859; the Neapolitan and Sicilian legislation still inflicted this sentence in *twenty-two* cases; in other provinces of the kingdom capital punishment was decreed in *twenty-seven* cases. Again, the Tuscan provinces had adopted the system of continual isolation; others preferred and were adopting the Auburn system. In some provinces, fetters were in use both for males and females sentenced to a long imprisonment; in others, they were entirely abolished. In some provinces, only those convicts sentenced to the heavier punishments were admitted into the bagnios; in others, these establishments served as prisons also to those sentenced only for a few years; in others, again, they were entirely proscribed. This diversity in the penal codes and the variety in the methods of incarceration could not be at once done away with, but the government is directing its efforts to the reformation and complete unification of its penal legislation.

For detention before trial there are the central or chief prisons of the provinces, the district prisons, and the communal jails, (number not stated.) For penal detention there are: Bagnios, for criminals sentenced to hard labor for life or a limited time, 21; bridewells, for prisoners sentenced to reclusion or public works, 11; prisons for those sentenced to relegation or banishment, 3; houses of correction, for persons sentenced to simple imprisonment, 6; special establishments, (classed under the general name of houses of punishment,) 10; special prisons for women, 5; houses of correction for juvenile convicts, (minors,) 4; establishments for forced detention (reformatories) of idlers, vagabonds, and youths admitted by request of parents for correction, (which also receive

juvenile offenders before trial,) 31 ; agricultural colonies, 2 ; penal establishment for invalids, 1.

The jails and prisons, as varying in their systems of imprisonment, may thus be classified : two on the system of continued isolation ; two on the system partly of continued isolation and partly of association ; five on the Auburn system complete ; two partly on the Auburn system, partly on that of community, and forty-five on the community system.

The question of establishing a hospital for lunatic convicts and a nautical reformatory is now under consideration by the central administration.

The average number of inmates of the jails (places of preliminary detention and minor punishments) for 1871 was 45,082 ; of the penitentiaries, 10,738 ; of the bagnios, 15,148 ; of the prisons for juvenile convicts under age, 573.

The system of continued isolation has been decreed for all detention-prisons. Several jails have been erected on this plan, others are in process of erection, and plans for a still greater number are under study.

In the sense of assigning prisoners to different penal establishments according to their crimes and sentences, a complete system of classification exists. In the detention-prisons, the following classes are, as much as possible, separated from each other : the arrested, (who are at the disposal of the authorities of public safety,) the accused awaiting trial, those sentenced for terms not exceeding a year, those detained in transit or sentenced and awaiting transfer, women, minors, and persons imprisoned for debt. In the bagnios there are recognized four divisions, with separate dormitories for each. They are : those sentenced for military crimes or assaults, those sentenced for theft, those sentenced for highway robbery, and those convicted of atrocious crimes, such as assassination, homicide, &c. Each of these four divisions is subdivided into three categories, distinguished by marks on their dress, according to their terms of sentence.

The funds for the support of the prisons are drawn from the general budget of the state. For the financial results of the prisoners' labor, reference is made to the official statistics, for which examination the undersigned has no time.

The pension to which the directors and officers of the prisons are entitled, after a service of at least twenty-five years, is determined on the same principle as that of every other officer in the civil service of the state. Thus, when retired after twenty-five years of service, they have as many fortieths of their salary, when it does not exceed two thousand Italian livres, and as many sixtieths when it is more than two thousand livres, as their years of service. But without regard to the twenty-five years of service there are cases of pensions granted to all classes of officers, when one becomes incapacitated by a wound caused by some extraordinary act performed in the discharge of his official duties, or by a disease contracted in the public service.

§ 7. A commission of distinguished and able citizens was appointed by the government of the republic of Mexico, which the undersigned had the honor to represent in the Congress of London as well as that of the United States, to draw up a report in answer to the series of questions submitted to that as well as to the other governments, which were invited to take part in the movement. On the subject of the prison system of Mexico, the commission say that in the capital of the republic there are two prisons, one for those who are simply arrested and detained, and the other for adult prisoners who are to be tried or have been already sentenced. Young children sentenced to a term of

imprisonment are placed in an establishment called "*hospicio de los pobres*," (*hospital of the poor*.) For the punishment of criminal children between nine and eighteen years of age, there is a special establishment, where they receive an elementary religious education and learn a trade.

The system of imprisonment is that of association. Its results are stated to have been very sad, the prisoners generally leaving the prisons worse than when they entered. Penitentiaries on the cellular system are in course of erection in several of the states. Only one has, so far, been completed.

As regards the proportion contributed by the labor of the prisoners towards defraying the cost of maintaining the prisons, the commission reports only in relation to the Federal district and Lower California, where it is from 40 to 50 per cent.

§ 8. In the Netherlands four classes of prisons exist: The central prisons, for criminals sentenced to eighteen months and over; detention-prisons, for terms of sentence less than eighteen months; houses of arrest, for sentences of three months and under; and police or cantonal prisons, for sentences not exceeding a month. The three classes last named also receive prisoners under arrest and awaiting trial. In some cases all three are united together, forming a single establishment.

Both systems of imprisonment, cellular and associated, have place in the Netherlands. In no case, however, can cellular separation be extended beyond a period of two years. The two systems are stated in the report to be applied not uniformly in the different prisons established on each plan, but in a manner quite irregular and little harmonious; consequently the results obtained are not such as to permit a fair and reliable comparison. Hence, there exists in the country a great difference of opinion on the question of preference. Still, the cellular system, considered in itself, and apart from the manner of applying it and the limits to be imposed on it, scarcely encounters any adversaries; and, for short imprisonments, public opinion is well-nigh unanimous in its favor.

The classification of prisoners does not seem to receive much attention in the Netherlands. In the central prisons, the more hardened and dangerous, and those sentenced on re-conviction, are separated from the other prisoners. The results are reported as favorable.

The funds for the support of the prisons are a charge upon the annual budget of the state. The part contributed by the labor of the prisoners is quite inconsiderable.

The pensions granted to prison-officers when they become incapacitated for further service are the same as those accorded to all other employés of the state. Beyond this statement no information is given.

The general proportion in which the sexes are represented in the Netherlands prisons is about twenty women to a hundred men; but this proportion varies, especially in the different provinces.

§ 9. There are four classes of prisons in Norway: Prisons established in fortresses, 3; houses of correction, 4; a penitentiary, 1; district-prisons, (corresponding to our common jails,) 56.

The system of imprisonment is that of association in the fortresses and houses of correction, and of separation in the penitentiary, and, to a very considerable extent, also, in the district prisons.

The sentences to the penitentiary range from six months to six years; but these sentences are shortened one-third, because of the system of

imprisonment (cellular) applied there. No comparison of results yielded by the two systems is given.

The average number of prisoners in the fortresses is 217; in the houses of correction, 940; in the penitentiary, 224; in the district prisons, not stated. The proportion of women in the district prisons cannot be accurately ascertained from the statistical returns; but in the penal establishments it is nearly one-fourth.

No classification of the prisoners is carried out in the prisons based on the system of association, but, in distributing the prisoners in the work-rooms and dormitories, care is taken to keep the less corrupted prisoners separate, as far as possible, from the older and more dangerous criminals. In the penitentiary has been introduced a system of progressive classification, based on the zeal and merit of the prisoners, through which some mitigation of their punishment is gradually afforded, by way of allowing the prisoners, to a larger extent than before, to read, write, receive the visits of their relatives, work in the open air, &c.

The pensions allowed to prison-officers on retirement are not regulated by law, but are matter of parliamentary grant in each individual case.

The expenses of the penal institutions are defrayed out of the exchequer, less the proceeds of the prison-labor. These expenses, in 1872, were 203,410 thalers, of which 109,970 thalers were met by the earnings of the prisoners, leaving 93,440 thalers to be supplied by the state. The expenses of the district prisons are paid by the districts in which they are severally situated. Nevertheless the exchequer has to pay for medicines, medical attendance, spiritual assistance, and the necessary clothing of the prisoners; besides which the district receives from the exchequer an allowance of 24 skilling, equal to 11*d.* sterling, a day for every prisoner. The balance to be paid by the district after these various grants cannot, one would think, be very onerous.

§ 10. The report submitted to the congress on the part of Russia was drawn up by Count Sollohub, president of the imperial commission recently appointed to devise a new penitentiary system for the Russian Empire. The count explains, in his introductory remarks, that a detailed description of the system now in operation in Russia is impossible, and, if possible, could not give an exact idea of things, since the penitentiary question in his country is at this moment passing through a transitional phase, a radical reform being proposed and certain experiments having been already commenced. Russia is thus between two systems, one acknowledged to be unsatisfactory and the other but just dawning, with its methods and measures yet undeveloped. From a scientific point of view, such a transitional phase might be interesting, but it could not give precise statements either as to what exists now or what is to exist hereafter. These considerations caused hesitation in respect to the preparation of any report to be handed in to the congress, but it was finally concluded to prepare and submit a report, under the reserve that it is to be regarded, not as the exposition of a system, but rather as a short sketch of the traditions of the country.

The existing laws of Russia relating to the arrested and the sentenced are divided into two parts, the first referring to the imprisoned, the second to the transported. The following is the present classification of prisons: 1. Prisons properly so called, (*ostrogs*), established in all the towns of the empire. Originally they were merely places of safe-keeping, the actual punishment being either bodily inflictions or deportation to the farthest limits of the empire, with a treatment of greater or less

severity. More recently they have been used for punishment in cases where the imprisonment does not exceed a year and four months. 2. Prisons for arrest. This must not be confounded with preliminary arrest, where the detention is merely that of safe custody. It is a true punishment, which is inflicted by justices of the peace for slight offenses and cannot exceed three months. 3. Houses of amendment and labor, established by the Empress Catherine, probably under the influence of Howard, to whom Russia owes her first notions of the humane treatment of prisoners. 4. Prisons for industrial sections or companies. These companies, sentenced to labor on public works, formerly under the jurisdiction of the minister of ways and communications, have lately passed into that of the minister of the interior. Sentences to this class of prisons cannot now exceed four years, though formerly they might be extended to twelve.

The system of associated imprisonment in rooms still exists in Russia, with some exceptions; for example, in the *ostrogs* of the first class there are separate cells.

The result of imprisonment in common by day and night, and also of deportation, has been found lamentable. It has created in Russia, a class of vagrants and worthless characters (*prolétaires*) not in harmony either with the fertility of the soil or the communal constitution of the country. The system individually preferred by the writer of the report is the following: 1, that of civil imprisonment for the accused awaiting trial; 2, that of cellular imprisonment for the convicted undergoing short sentences, with a reduction of two-thirds of the punishment as compared with the duration of collective imprisonment; 3, for houses of correction and convict prisons, that of separation by night in small cells open at the top, arranged in large common dormitories, well ventilated, well lighted, and under constant supervision, with labor in common workshops. The report opposes cellular imprisonment for long periods, on the ground that it must either render the prisoner torpid, or produce in him such a constant feeling of restraint as will necessarily paralyze the play and development of his individual will, sole means of his regeneration.

Classification of the prisoners is rigidly required by the Russian legislation, but the bad condition of many of the prison edifices, and especially the lack of space, restricts it to the separation of the sexes and of persons arrested from those who are undergoing their punishment.

The prisons derive their support mainly from the treasury of the state. The earnings of the prisoners have thus far been inconsiderable, especially when considered in comparison with the vast population and the immense productive power of the empire.

The system of pensions is uniform for all public functionaries. What that system is is not stated.

§ 11. The prisons of Switzerland may be divided into four groups: 1, those of five cantons are administered on a kind of patriarchal system, (whatever that may mean,) by sisters of charity; 2, those of three other cantons are administered on a different system, but leaving much to be desired in the way of improvements; 3, nine cantons have prisons of medium excellence, some of which are advancing toward the first rank; 4, four cantons, Argovie, Bâle ville, Neuchâtel, and Tessin, have penitentiaries of a higher grade of excellence, into which has been introduced, in different degrees and under various modifications, the progressive Crofton system.

The system of congregate imprisonment predominates; but effort is

made to introduce cellular separation, especially at night. There is a general agreement that the system of association is favorable to industrial labor, and not unfavorable to discipline, but that, when extended to the dormitories as well as to the workshops, it is obstructive to the moral education of the prisoners.

Penitentiary training, it is held in Switzerland, imperatively requires cellular separation, at least in the initial stage; and it is on this sole condition that the prisoners can effectively enter into communion with themselves, a process which would be impeded by the contact and influence of some, at least, of their fellow-prisoners.

After the cellular stage, it is considered expedient to allow those prisoners to work together who furnish ground of hope that a moral reformation has been, or may be, accomplished in them. It is under these conditions that associated labor is found in recently-constructed penitentiaries.

The public opinion of Switzerland shows itself more and more favorable to the progressive Crofton penitentiary system, with conditional and revocable liberation. The exclusively cellular system should be reserved (so it is thought) for houses of preliminary detention, and for them it should be the only system in use.

A methodical classification of prisoners exists only in the more recently constructed prisons, which are conducted, as far as circumstances permit, on the general principles of the Crofton system. There are, however, no intermediate prisons in Switzerland, and, consequently, wherever the Crofton system has been introduced, its application is carried out in one and the same establishment. The financial resources of no single canton would permit the realization of such a system, which could be applied only by a union of funds of several cantons directed to that end. Besides which, public opinion, more or less imbued with the old ideas of intimidation and vengeance, is not yet ripe for such a change.

The treasury of each canton covers the deficit resulting from the difference between the total expenditure and the special receipts of its prisons, which receipts are composed of the proceeds of the prisoners' labor and moneys paid by cantons that place their convicts in the penitentiaries of other cantons of the confederation. In several of the cantons, where the prisons are best organized and industrial labor best managed, the industries yield an income approaching, and in one or two instances covering, the current expenses of the establishments, not including, however, the salaries of officers, the cost of repairs, or the *peculium* paid to the prisoners.

Pensions are granted only in exceptional cases to public functionaries, when they become incapacitated for further service. This rule applies to prison-officers, as to all others.

§ 12. There are in Sweden: 1, cellular penitentiary prisons in each province; 2, central prisons on the associated system—some for women, others for men; 3, houses of arrest in certain small towns and districts.

The cellular prisons are used for the accused during the preliminary proceedings, for prisoners sentenced to hard labor for two years and under, for prisoners sentenced only to reclusion, and for those who, not having the means to pay the fines imposed on them, are required to render an equivalent in the form of imprisonment on bread and water. Some prisons on the associated plan are used for persons sentenced to hard labor for life, and others for those sentenced to hard labor for a term exceeding two years.

The results of cellular imprisonment for those awaiting trial and for

sentenced prisoners released at furthest after two years' imprisonment have been favorable. Congregate-prisons, such as they still exist in Sweden, having dormitories in common for forty to one hundred and thirty prisoners each, are regarded, in spite of the strictest supervision, as nurseries of vice and crime. In those associated prisons where a separation takes place at night, and in which the prisoners work in small groups in common workshops by day, the results are found to be favorable. The official report on the prisons of Sweden was drawn up and is signed by Mr. Almquist, director general of prisons for that kingdom, who says: "Of all known penitentiary systems, it appears to me that the most excellent is the Crofton or progressive system, adopted in Ireland, with its special stages, through which the prisoners are required to pass."

No classification of prisoners exists, beyond that of separating the sexes, and, as far as possible, young prisoners from the older and more hardened ones, in the common dormitories of the associated prisons.

Prisoners not yet sentenced and those sentenced simply to reclusion are not compelled to work. They spend their time as they like, working, reading, &c. They may procure better food and more comforts than the prison supplies, provided they do not thereby interfere with the order and security of the prison. Prisoners sentenced to hard labor must do the work set them, and are restricted rigidly to the prison fare.

On attaining the age of fifty five, prison-officers have the right to retire from the service on a pension of two-thirds of their salary; those who serve till they are sixty-five generally receive from the Parliament a pension equal to their whole salary.

§ 13. The North American Republic is composed of nearly forty States with local self-government, and a dozen dependencies not yet elevated to the rank of States. These fifty jurisdictions are, in matters of crime and punishment, independent of each other, and very little controlled by the National Government. They vary in antiquity from Virginia, New York, and Massachusetts, which have been inhabited by the Indo-European races for more than two centuries and a half, to the new Territories of Dakota and Montana, which ten years ago were occupied only by roving savage tribes; and, consequently, almost every variety of social condition prevails in this vast area, larger than half of Europe and more populous at this moment than any European nation except Russia.

As a nation, the United States have existed for nearly a century, their separation from the British Empire being coeval with the first improvement of prisons, resulting from the labors of John Howard. Consequently, the prison system of America, like all the modern systems, dates no further back than 1784, when the old Walnut Street prison of Philadelphia was built, and the first organized effort to improve prison discipline in the United States was made by the Pennsylvania Society for alleviating the Miseries of Public Prisons, of which Dr. Franklin was one of the founders, in 1787. The National Government, as now established by the Federal Constitution of 1787, dates from the same period; but it has never much concerned itself as a Government with the prison system of the country, its first step in that direction being the appointment of the undersigned in 1871, as a commissioner to the International Prison Congress of London. Whatever has been done, therefore, has been the work of the separate States of the Union, and almost wholly within the present century. The oldest penitentiary now in use is probably that of Massachusetts, at Charlestown, near Boston, which was begun in 1800 and first received convicts in 1805. Among the county-jails there are probably a few older than this, but the greater number,

both of state and county prisons, have been built since the beginning of the world-wide controversy between the advocates of the cellular or Pennsylvania system and the silent or Auburn system, now generally known as the *separate* and the *congregate* systems of prison management. This controversy, opened in America about half a century ago, took a concrete and practical form with the opening of the Auburn and Sing-Sing penitentiaries in the State of New York, built on the congregate plan, with separation at night in single cells, and the two penitentiaries of Pennsylvania, at Philadelphia and at Pittsburgh, built on the separate plan, with cellular imprisonment day and night for each convict. New Jersey and Rhode Island, in imitation of the eastern and western penitentiaries of Pennsylvania, introduced the cellular system into their state-prisons, respectively; but those States abandoned the system years ago, and more recently it has been given up at the western penitentiary of Pittsburgh. So the result of the controversy in the United States is that cellularism exists only at the Cherry Hill prison, or eastern penitentiary, in Philadelphia; in some of the county-jails of Pennsylvania; in the Suffolk County jail in Boston; and possibly a few other prisons of the same class. The proportion of prisoners confined on the separate plan in the whole United States is about one to thirty, or in the neighborhood of 3 per cent. It is therefore evident that the system of association, as opposed to that of cellularism, is the one which prevails in the United States. Nevertheless, it is believed that the enlightened friends of prison reform in this country very generally prefer the system of complete separation for all prisons of preliminary detention, and, moreover, that they would prefer the restriction of all detention prisons to the purpose of safe-keeping alone, while minor offenses, they hold, might better receive their punishment in district-prisons, forming a middle class of penitentiaries between the detention-prison and the state-prison, in which reformatory principles and processes might be more hopefully applied than they are now or ever can be in the county-jails.

The broad distinction of American prisons is that stated above, viz, into state-prisons and county-jails. States are the Federal unit of the American republic, and of these there are thirty-seven; but the units of each State are the *counties*, numbering, in the whole country, about 2,100. In each of these counties there is, or may be, a county-prison, and in some of them there are two, three, or four. In the thirty-seven States there are now thirty-nine state-prisons and two state workhouses; the latter in Massachusetts and Rhode Island. In two States, Florida and Delaware, there are as yet no state-prisons; in Pennsylvania and Indiana there are two each, and in New York there are three. Reckoning about forty state-prisons in all, the average number of their inmates, for the last year or two, has been about 16,000; but for the last year the number has been increasing. Of this average number, the State of New York has furnished about 2,700 in its three great prisons; Illinois, 1,300 in its one prison; Ohio, a little more than 1,000; Pennsylvania, a little less than 1,000; Massachusetts, (including the workhouse convicts,) nearly 900; California, almost 800; and Missouri nearly 900; so that these seven States supply about one-half the convicts of the higher grades of crime. The same is true of the inmates of the city, county, and district prisons of all grades, who, in these seven States, average now probably nearly 10,000, out of a total in the whole country of perhaps 22,000. These numbers are nothing more than careful estimates, while the average in the state-prisons is quite exactly computed, the fact being that nobody knows precisely the number of the county-jails in the United States, much less the average of their

inmates; nor is the number of the town and city prisons known, nor the average of their inmates. The district-prisons—intermediate between the state and county prisons—are few in number, and are very well known. These four classes—municipal, (town and city,) county district, and state-prisons—include all places of confinement in the United States, except for juvenile offenders.

In all these prisons, of all classes, when the last census was taken, (June 1, 1870,) the number reported in confinement was 32,208, but this is known to have been too small. The true number, even at that season of the year—the summer—when the fewest persons are in prison, was not less than 35,000, and in the winter of the same year it no doubt rose to more than 40,000, with an average number through the year of at least 38,000. If we suppose the same to be the average number in confinement during 1871, and 16,000 to be the average number of state-prison convicts, (neither being far from the true number,) it is probable that 8,000 of the remaining 22,000, and perhaps even half that number, (which would be 11,000,) are held in jail awaiting trial or sentence, while from 11,000 to 14,000 are under sentence in the minor prisons of counties and districts, for offenses of less criminality than are punished in the state-prisons. As for the sex of these prisoners, if we confine ourselves to general statements, we shall be within bounds in saying that not more than one in six of the 38,000 persons mentioned as the average prison-population of the whole United States are women. The proportion is much less than this in prisons of the highest grades; that is to say, the state-prisons.

§ 14. Prison management has been made a subject of study and discussion in England for more than a century. An interesting and able review of the progress of things in this department of the public service is given by Major Du Cane, chairman of the directors of convict-prisons, in the report which, by direction of the British government, he submitted to the penitentiary congress. It would occupy too much space to give even the most condensed summary of this history, and the undersigned limits himself, therefore, as in the case of other countries, to a brief exposition of the actual penitentiary system of England as applied in the convict or state prisons, and set forth in the paper of Major Du Cane.

The English convict-system is devised with a view to combine the principle of deterrence with that of reformation. While the importance of the latter of these principles is admitted, the former is held to be paramount, because punishment (such is the theory) is designed primarily to prevent crime by the warning thereby held up to those who might, but for such deterrent influence, fall into it.

The sentence to penal servitude in England is divided into three principal stages. The first stage is passed at Pentonville or Millbank, and lasts nine months in all cases. During that period the prisoner passes his whole time, except the periods allotted to prayers and exercise, alone in his cell, working at some employment of an industrial or remunerative character. The second stage is passed in a prison in which he sleeps and has his meals in a separate cell, but works in association under a close supervision. The third period is that during which he is conditionally released from prison, but is kept under the supervision of the police, and made liable for any infraction of the conditions of his release, the consequence of which is that he is to be returned to prison, there to fulfill the whole of the remitted portion of his sentence. A stage intermediate between the second and the conditional release is applied to women, who may be sent to "refuges" for six months before their re-

lease on license. The refuges are establishments managed by private persons who interest themselves in preparing the women for discharge and in procuring suitable situations for them.

Cellular seclusion for long periods has been found in England to have an enfeebling effect upon the prisoner. When the system was first established, the duration of the time of separation was fixed at eighteen months; but such results followed that, after various experiments, the present period of nine months has been fixed upon as the longest to which prisoners can, with advantage, be subjected to this stage of the discipline. A stage of separate imprisonment is held in England to be indispensable to the best effects of convict treatment. It is not only in itself a severe penal discipline, but the mind of the convict is thereby thrown in upon itself; he becomes accessible to lessons of admonition and warning; religious influences act upon him with greater force, and he is put into a condition in which he is likely to feel sorrow for the past and to welcome the words of those who show him how to avoid evil in the time to come.

There are eleven convict-prisons in England, eight of which are exclusively for males, two exclusively for females, and one mixed. The aggregate capacity of these prisons is: males, 8,764; females, 1,239; total, 10,003, exclusive of infirmary and punishment cells. The average except for number of prisoners is 7,833, of whom 1,100 are women.

Two of the convict-prisons, and parts of two others, are on the separate plan, but separate cells are provided for all prisoners at night, invalids of certain classes and some of the women.

In all but two of the convict-prisons—Pentonville and Millbank—the prisoners work in association.

The pensions granted to retiring prison-officers are regulated upon the same general principles as those accorded to other civil officers.

The whole number of borough and county jails in England is one hundred and twenty-two, of which thirty-five belong to the first class and eighty-seven to the second. There is no difference between these two classes of prisons, except that the county-prisons are governed by the county-magistrates, and the borough-prisons by the borough-magistrates. The aggregate capacity of both classes is 27,169. The average period of imprisonment is less than one month. Three-fourths of the prisoners have terms under a month and the remaining one-fourth under six months. Less than one in a thousand have an imprisonment exceeding the last-named period.

As a rule all prisoners are separated at night. In many prisons they work to a certain extent in association, but under such supervision as the governors consider sufficient to prevent communication.

§ 15. The world—that is, the part of it interested in penitentiary questions—may almost be said to know the Irish convict-prison system by heart.*

This system consists of three, or, including the period of provisional liberation, four, stages.

The first stage is that of cellular imprisonment. Its duration varies from eight to nine months, according to the conduct of the prisoner. During this first stage the imprisonment has a character intensely penal. The work required is rude and uninteresting, and the rations furnished are moderate in quantity and coarse in quality. The aim of this rigor is to cause the prisoner to enter, as it were, into himself, and to produce

*This has heretofore been commonly known as the Irish prison system, but is now coming to be designated as the Crofton system, in compliment to the eminent man who devised and first put it in practice.—E. C. W.

upon his soul a lasting impression. The prisoner, however, during this initial stage, is made thoroughly acquainted with the whole system and with all the advantages that will accrue to him in his progress toward liberty, if he takes kindly to it and is uniformly well-behaved and attentive to all his duties.

The second stage is passed in a congregate prison, with separation at night and associated labor during the day. The prisoner is here subjected to a much milder treatment, and his condition is improved more or less rapidly according to his conduct. He receives each month a certain number of marks which determine his advance from one class to another, for the essential principle of this second stage is that of a progressive classification, based on good conduct and merit. There are four classes. Each class marks a change in the prisoner's situation and a mitigation of his punishment. On reaching the fourth class he no longer wears the prison-garb; he is employed on special works; he enjoys many privileges; and he may almost be said to approach the state of liberty. It is this second stage which really characterizes the system. It is so arranged and adjusted as to become an effective trial of the prisoner. If he is steadfast in his good resolutions and good conduct, he passes on from class to class; if, on the contrary, he is ill-disposed and disobedient, he is degraded to an inferior class, even to the lowest, if his conduct be such as to merit such severity. The convict who has successfully passed through this series of trials is adjudged to be prepared for a state of comparative freedom, and he is consequently admitted into the intermediate prison.

This constitutes the third stage in the Crofton system. Here the imprisonment is little more than moral. The prisoner wears the dress of a freeman, works on a large farm with his fellows, attends the village church, and is subjected to little more restraint of any kind than an ordinary free laborer. This is, in effect, a probationary stage, and is designed to test the genuineness of his reformation. It is, for him, so to speak, the apprenticeship and prelude of liberty. If he hold out to the end in a good course of conduct, he receives a ticket of license and becomes conditionally free. The duration of his imprisonment may thus be shortened to the extent of a fourth part. But if, on the other hand, his conduct is evil, he is remanded to the associated, or even to the cellular prison, to work his way up again by the same painful and painstaking process as before.

The fourth stage of the Crofton system is that of conditional or preliminary liberation, which need not be particularly described. It will thus be seen that Sir Walter Crofton has devised a complete system of penal treatment; one which has a beginning, a middle, and an end, and which is, at one and the same time, penal and reformatory.

CHAPTER II.

PRISON ADMINISTRATION.

§ 1. All the prisons of Austria are under the jurisdiction of the ministry of justice, which shares its powers of administration with two other classes of authority—local and intermediate. All matters of minor importance, which are naturally the most numerous, are attended to by the local authorities, and those of a graver character by the intermediate authorities. It is only questions of the highest importance that are submitted to the decision of the ministry of justice. The ministry of

justice, as the central authority over all prisons, is by law empowered to appoint an official, from its own office, as the representative of the minister, and to entrust him with the supervision and guidance of all prisons. But, since 1867, an inspector-general of prisons has been appointed.

The ministry of justice appoints the directors of male prisons, the inspectors of female prisons, the chaplains, the book-keepers, and the financial and medical officers. The subordinate officers are named, in certain prisons, by the local, and in others by the intermediate authorities. The tenure of office is, as with all the servants of the state, without limit, that is, during good behavior.

§ 2. In Belgium, as in Austria, the ministry of justice has all prisons under its jurisdiction. The penitentiary of Louvain has a commission charged with the inspection and supervision of that establishment. There are also commissions charged with the general supervision of the other prisons, and constituting administrative boards, invested with the right of investigating and redressing abuses, of proposing and introducing reforms to the advantage of the service, of granting to the employés leave of absence for five days, and of imposing upon them certain disciplinary punishments. The appointment of the directors and assistant directors is by royal decree. The other functionaries and employés of the prisons are named by the minister of justice. There is no limit to the tenure of office; it belongs to the government to judge whether the functionary ought to be retained or dismissed.

§ 3. No information is given in the report from Denmark concerning the prison-administration of that country, except what is contained in the single brief statement that "a director of prisons has the control of all the prisons." It is to be presumed that there are some limitations to his powers; but what they are, the undersigned is unable to state.

§ 4. The prisons of France, except those of Paris, depend upon a central power, which is represented by the minister of the interior, and, under him, by the director of the administration of prisons.

The central power exercises its control by means of general inspections, made by special functionaries—namely, inspectors-general of prisons. Besides this direct and most important control, there is a local control of the prefects for all the prisons and penitentiary establishments; of the mayors and commissions of supervision for the houses of arrest, of justice, and of correction; and, finally, of the council of supervision for the colonies of correctional education of juvenile delinquents.

The director of the administration of prisons is charged with administering, under the authority of the minister of the interior, the prisons and penitentiary establishments of every class in France. Under him, and as a deliberative consultative board, is found the council of inspectors-general of prisons, which is called upon, in the interval of their tours of inspection, to give advice on the more important questions of the service. The instructions and regulations emanating from the central administration are addressed, through the intervention of the prefects, who represent the executive power in the departments, to the directors of the different establishments. At the head of each central prison is found a director. His action extends to all parts of the service. He is specially charged with conducting the correspondence with the minister of the interior, to whom he addresses his reports on the financial, industrial, and disciplinary condition of the establishment, through the agency of the prefects, except in urgent and extraordinary cases. Directors of the houses of arrest, of justice, and of correction are charged with the administration of those establishments in one or more departments. In the prisons situated at the place of their resi-

dence their action makes itself felt directly, like that of the director of a central prison, on all parts of the service, and in the other prisons indirectly through the agency of the principal keepers, who receive their instructions and are required to address to them frequent reports. An important part of their functions has reference to the economical administration of the prisons, to purchases, to the verification of expenses, to the control of the accounts, cash, and material; in short, to the preparation of the various financial documents which they send to the central administration. The principal keepers are the agents charged with the care and supervision of the houses of arrest, of justice, and of correction.

In the central prisons and other similar establishments the functionaries, employés, and agents, to whichever department of the service they may be attached, are named by the minister of the interior.

As regards the houses of arrest, of justice, and of correction, the functionaries and employés proposed for the administration are named by the minister, and the employés of the other services are named by the prefects, as also the agents of supervision other than the chief keepers. Still, these appointments do not become definitive till they have received the ministerial approval.

By the terms of the law of the 5th August, 1850, relative to the education of juvenile delinquents, every private penitentiary colony is governed by a responsible director, approved by the minister of the interior. The employés placed under the orders of the director must be, in like manner, approved by the prefect.

In the department of the Seine, where the prisons are managed, in many of their relations, under authority of special provisions, the directors are named by the minister of the interior, on presentation by the prefect of police; the other employés are named by the prefect. In effect, it is the prefect of police who, in Paris, administers the penitentiary establishments.

The inspectors-general of prisons and penitentiary establishments are named by the minister of the interior.

The duration of the functions of the different employés composing the *personnel* of the penitentiary service is not limited by any determinate time. The agents who have not been gravely derelict in the exercise of their functions continue in place till they have reached the age at least of sixty and have been in service thirty years.

§ 5. The several states of the German Empire represented in the congress report as follows:

(1) All the prisons of the Grand Duchy of Baden are under the control of the minister of justice and foreign affairs, who exercises over them complete administrative power. There is, however, a council of inspection for all the larger penitentiary establishments. This council decides on the complaints of prisoners and the admissibility of administrative proceedings against the inferior prison officers when such proceedings are beyond the cognizance of the director, confirms the contracts entered into by the administration for the supplies of the prison, and gives the necessary order, if desirable in any case, to substitute collective for solitary imprisonment. The superior officers are appointed by the grand duke, the inferior officers by the minister of justice; their appointment is for life.

(2) All the prisons of Bavaria are under the jurisdiction of the ministry of justice. The direction and inspection of prisons where imprisonment of more than three months is undergone belongs exclusively to this ministry, without the action of any intermediate authorities; the

inspection of the other prisons is by local officers. For the cellular prison at Nürnberg, there exists a special council of inspection, consisting of state officials, judges, district-attorneys, and prison-officials, together with private persons belonging to Nürnberg. The directors and administrators are appointed by the King; the chaplains, doctors, teachers, stewards, and technical instructors by the ministry of justice; the keepers and clerks by the director of each prison. The directors and administrators only are appointed for life, but the other officers also look upon the service as one in which their life is to be spent. As a rule, officials quit the prison service either in the beginning, when their inclinations are against this work, or when it becomes apparent that they have not the necessary capacity, or on their being appointed to higher posts.

(3) In Prussia there is no central authority having control of all the different classes of prisons. The local prisons, designed exclusively for preliminary detention and for punishments of short duration, are under the control of the minister of justice, while the great penitentiary establishments belong to the jurisdiction of the minister of the interior, who decides upon the general principles which are to regulate the economic administration of each prison and the treatment of the prisoners under the relations of discipline, religious and scholastic instruction, labor, clothing, and food. He causes inspections to be regularly made of the several penitentiary establishments by the high functionary attached to his ministry, who is specially charged with the oversight of prisons; and he decides, in the last resort, on all matters of complaint presented to him either by prisoners or by employés.

All other matters appertaining to the control and administration of the prisons are attended to by the administrative authorities of the provinces. To these especially belong the permanent control to be exercised over the employment of the moneys assigned to each establishment; over the details of the economic and industrial administration; over the treatment of the prisoners, whether in point of discipline or in other respects; and over the conduct and fidelity of the employés of the prison. In this view, every establishment is inspected by members of the provincial authorities delegated to that duty, at intervals not exceeding the lapse of some months.

The minister of the interior appoints the directors and superior officers of the prisons; the subaltern officers are appointed by the provincial authorities. The superior officers, after a certain period of trial, are appointed for life. The subalterns are liable to dismissal; yet, after some years of blameless conduct, they also are appointed for life.

(4) There exists in Saxony no one central authority for the administration of the penitentiary system.

The administrative authority rests, except in prisons belonging to courts of justice and police, in the hands of the ministry of the interior. The ministry of justice takes cognizance, by commissioners, of the manner in which the sentence is carried out, and also controls the domestic arrangements. The prisons belonging to courts of justice, in which imprisonment not exceeding four months can be undergone, are superintended by the ministry of justice, which has issued remarkable orders relating to the spiritual care and the industrial occupation of the prisoners. Neither the text nor the purport, however, of these orders is given in the report submitted to the congress.

(5) The economic and correctional administration of all the prisons of Würtemberg is controlled by a central authority, which also exercises supervision over district-prisons for preliminary detention and

minor punishments. The central authority is subordinate to the minister of justice. It is composed of members of the departments of justice, of the interior, and of finance; it has likewise attached to it some skilled ecclesiastical members, a doctor, an architect, and a merchant.

The directors and the chief officers of the administration are appointed by the King, on the nomination of the minister of justice, who first consults the commissioners for prisons. These appointments are generally for life. The subordinate officers are appointed by the commissioners for prisons.

§ 6. The whole of the detention and penitentiary administration of the prisons of Italy, whether as regards the buildings, regulations, officers, discipline, or general supervision, is superintended by one central authority, which forms the general prison board and depends on the ministry of the interior. This board is composed of the director-general, four inspectors, and three departments, one of which is intrusted with the supervision of the directive, sanitary, and religious officers and jailors, another attends to the financial administration; and the third regulates whatever refers to the construction of the buildings and the wants of the prisoners. Besides this, there is an office of statistics, a technical officer of engineers, and a copying-office, each of these having special employés and special work.

All these branches of prison administration are concentrated in the general director, who, in his turn, regulates the service, seconded by the consultative vote of a council of administration and discipline, composed of at least two central inspectors, and the director of that department to which is intrusted the special subject under discussion. Nor does it seem possible otherwise to direct an administration so vast, and one requiring, as an indispensable rule, the most perfect unison in thought and regulation, to carry into effect the principle that "every citizen is equal in the eyes of the law."

The directors and officers of the prisons, whether central or local, are named by royal decree; the keepers and foremen by decree of the minister of the interior, on the proposal of the director-general.

The tenure of office for the higher functionaries is for life; nor can they be removed, except for causes which would render them unfit for the service or unworthy of a place among the officers of the state. The keepers are chosen for six years. As to the foremen, their engagements with the penitentiary administration depend, in each case, on special arrangements.

§ 7. There is no central power in Mexico which controls the penitentiary administration of the whole country. The prisons in each municipality are under the care of a commission. The prisons of each state are subject to inspection by the governor of the state. In Mexico itself, (city and district,) the governor and home secretary have a power of inspection.

§ 8. All the prisons in the Netherlands are under the supreme direction of the minister of justice, and the general inspection of the prisons is made by an inspector, who has his deputy in the bureau of the department of justice. For the inspection of the buildings, an engineer-architect is attached to the same department. The courts and tribunals are also required to cause the prisons to be inspected, from time to time, by members assigned to that duty. The reports of all these inspections are addressed to the minister.

The administration of the several prisons is confided to administrative commissions named in each locality where a prison exists. The members of these commissions are named by the King from among the

notables of the locality, who receive no salary. Whatever appertains to the local administration, to the internal service, to the discipline, and to the execution of the general and special regulations is confided to these commissions or is done through their agency. They are in official relation with the minister, either directly or by the deputy of the royal commissioner (governor) of the province, their immediate superior and their honorary president.

The directors of the central prisons are appointed by the King, the other officers by the minister of justice. There is no defined tenure of office. Incumbents hold their offices until they are displaced, dismissed, or voluntarily retire from the service.

§ 9. The department of justice is supreme in the administration of the prisons of Norway. This department is charged with the immediate administration of the prisons which receive prisoners sentenced to hard labor; while, under it, the administration of the inferior or district prisons is confided to the prefects. The position and general functions of prefects are not stated in the report. Every prison of the higher grade has also its local administration, which makes the necessary arrangements with regard to prison discipline, economy, &c.; always, however, in conformity to the rules laid down by the department of justice, or having its approval and sanction. A director-general of prisons is wanting. The special directors and the chaplains of the several prisons are appointed by the King; the medical and financial officers are named by the department of justice; the teachers receive their appointment from the chaplains, and the other functionaries from the directors. The members of the local managing boards of the district, who generally receive no salary, are named by the King, being taken from among the judicial or administrative officers of the district. The subordinate officers of this class of prisons are appointed by the prefects. Tenure of office is not for a fixed time.

§ 10. The prisons of Russia are divided into two classes, military and civil. The military prisons are under the jurisdiction of the ministers of war and of the navy; the civil prisons are attached to the ministry of the interior. The latter are further placed under the Imperial Society for the Guardianship of Prisons. This society was established in 1819, and has for object the introduction of a more humane treatment of prisoners. In 1830 it was by law invested with fresh powers and prerogatives. A committee, formed by a central committee sitting at St. Petersburg under the presidency of the minister of the interior, is established in the capital of each province, with branches in each chief town of the several districts. These committees are composed, *ex officio*, of the officers of the state and of volunteer and benevolent members, who have a small salary and certain honorable prerogatives. These committees select the governors and direct the economic management of the prisons. A considerable sum is granted for this purpose to the committees, who have the right of referring, in a prescribed manner, to the minister of the interior under his double office of minister and president. This system not only lessens the expenses of administration, but has led to considerable gifts and the formation of a special capital. It must, however, be acknowledged that such a system of administration produces a certain amount of carelessness and irresponsibility in the exercise of power, and that the principle of philanthropic committees and their participation in the management of prisoners require important modification in Russia.

Outside of the control of the committees, there was recently established, when municipal laws were created in Russia, a new mode of de-

tention, named arrest, not to be confounded with preliminary arrest. The punishment of arrest, inflicted by justices of the peace for slight violations of the law, cannot exceed three months. The establishment, maintenance, and administration of these new local prisons are under the control of the municipal institutions of each province.

The appointment of directors and of members of committees is confirmed by imperial decree. The other officers are appointed by the minister of the interior. Their tenure of office is not limited.

§ 11. All the prisons of Sweden are placed under the control and administration of a central independent authority, called the general administration of prisons. Under this general administration, the provincial government has the direct inspection of the cellular prisons established in each province. The general administration derives its authority from the government, to which all reports are made through the medium of the minister of justice.

The directors and officers of all the prisons of the state are named by the general administration of prisons. They are appointed for no specified time, and generally they retain their places as long as they show themselves competent to their work.

§ 12. The Swiss Confederation, composed of twenty-two cantons and embracing twenty-five states, does not, by its own power, exercise any control over the administration of penal justice and of prisons, or over the penitentiary *régime*. Military and political penal justice, so far as it is called upon to punish offenses against the constitution and the federal laws, alone comes within its jurisdiction. Each canton is sovereign. It has its own special penal system and its own places of imprisonment. Its prisons are thus placed under the control of the cantonal executive authority or of the council of state.

The supervision of the prisons belongs more especially to one of the departments of the executive power. In certain cantons the prisons are placed, wholly or partially, under the supervision of the department of police, in others under that of the department of justice or of the interior, according to the stand-point from which the importance of this public service is viewed. In the cantons in which recently-constructed penitentiaries are found, the whole or a part of the supervision is confided to the director of justice, or to a special department, which gives its attention not only to prisons, but also to hospitals, insane-asylums, &c. This department associates with itself a commission of supervision composed of three to seven members, selected from among persons experienced in questions of penitentiary reform, of industry, and of commerce. In the cantons where this machinery exists, an official regulation defines the functions of the commission of supervision. The detention-prisons in the districts and places of detention for civil penalties are supervised by the agents of the council of state—prefects, counselors of prefecture, &c.

The officers and employés of the prisons are named by the council of state. In the cantons where penitentiaries of recent construction exist, the officers are proposed by the department of justice or of police, which takes the advice of the commission of supervision. The foremen and overseers are appointed by the commission of supervision, on the nomination of the director of the penitentiary.

In some cantons the officers are subjected to a re-election every three years, in some every four years, and in others the tenure of office is without limitation.

It may be affirmed that, as a general thing, the officers of the Swiss penitentiaries are not exposed to the influence of political changes, and

that those whose position may have been endangered by the victory of a party have been effectually shielded by a public opinion which appreciated their merits and their devotion.

§ 13. The General Government of the United States, as was observed in the preceding chapter, does not concern itself with prisons. It has not a solitary jail or penitentiary under its jurisdiction, but imprisons the few criminals convicted under its laws and by its own courts in the States where the conviction takes place. Prison-administration, therefore, is a thing relegated to the governments of the several States. But even in the individual States there is no central authority governing all the prisons, although the last ten years have developed a tendency to establish such a central bureau in several of the States. Generally, the bureau is charged with the inspection of prisons only, and has no power to regulate their management or appoint their officers. Such bureaus exist, under the name of boards of public charities, in Pennsylvania, Michigan, Illinois, Wisconsin, and Missouri; and similar boards in Massachusetts, Rhode Island, and North Carolina take some part in prison inspection, or management, or both. In New York the State board of charities is expressly excluded from any direction or even inspection of the prisons, and the three great prisons of that State are placed under the control of another board, known as the inspectors of State prisons, while a private society, with public duties, the New York Prison Association, of which the undersigned was for many years the secretary, is allowed, and indeed required, to inspect all the prisons of the State and the counties. Nothing that can properly be called "*central authority*" over all the prisons of a State is known to exist anywhere in the Union; but wherever there is the nearest approach to this, the results are the most satisfactory. Without it, there is, at best, a great lack of method and of the highest order of prison discipline; and often gross abuses prevail in many of the local prisons. These have been revealed, to some extent, in official reports within the past five years, notably in New York, Pennsylvania, Ohio, Michigan, Illinois, and Wisconsin; and were a searching investigation to be made in other States, even those most noted for the excellence of their prison administration, no doubt such would be revealed in them too. As a rule, each city and county manages its own prisons; and where a city or county has several prisons, these are very likely to be under distinct officers or boards of management, which have little acquaintance with each other and little knowledge of the general system of prisons in the State.

Hence, if we find in any State a prison exceptionally well managed, like the Albany penitentiary, under the management of General Pilsbury, and the Detroit house of correction, under that of Mr. Brockway, it by no means follows that the other prisons will be good; and it may happen that a spirit of envy or jealousy will prevent the managers of one prison from adopting the improved system which has been introduced into another. The chief defects of this disorganized condition of prison management spring, however, from a mutual ignorance of the condition and working of prisons that should co-operate with each other; and one great advantage derived from the meeting of the Cincinnati Prison Reform Congress was a better acquaintance of prison managers with each other, and a wider knowledge gained by them of the prisons of their own and other States.

§ 14. In Great Britain and Ireland the prison system is far from being a unit. In neither country is there any such thing as a central and supreme authority, possessing jurisdiction over all its prisons. For the convict-prisons alone, there is in each a central and controlling

power, which sits at the helm, and which has within its jurisdiction the entire administration of the system. But as regards county and borough prisons, both in the larger and smaller island, the government has little power beyond that of inspection. Each prison has its own board of visiting justices, supreme within its own domain, but with no bond of union between them, and no power capable of giving unity and symmetry to the whole circle and system of prisons and their administration.

CHAPTER III.

PRISON DISCIPLINE.

§ 1. The agencies employed in the prisons of Austria as a stimulus to obedience and industry are: 1. The possibility of imperial clemency. Prisoners cannot shorten their terms of sentence according to any fixed rule, that principle not having, as yet, been introduced into the Austrian penitentiary discipline. But, according to an ancient custom, a number of prisoners who have undergone the greater part of their sentences, and who have given solid proofs of improvement, are recommended periodically to the Emperor for pardon. 2. A share in their earnings. The industrial system is not uniform in the prisons of Austria. In some the labor of the prisoners is let to contractors; in others, it is utilized on account of the state. In the former class of prisons the convicts receive one-half of the proceeds of their work after deducting certain expenses, not very clearly explained in the report. In the latter class they receive a share, regulated by a fixed tariff, which amounts to about the same as that received by prisoners who work on contract. What is said above relates to prisons on the associated plan. In the partially cellular prison of Gratz, each prisoner has his daily task. Here the progressive system has been introduced; according to the measure of his industry and the class to which he belongs, each prisoner has placed to his credit daily a sum varying from two to six kreutzers, and, at the end of the month, the value of whatever overwork he may have done during the month.

Besides the above-mentioned rewards, the privilege is accorded to the prisoners of spending one-half of what stands to their credit (not exceeding, however, a florin and twenty kreutzers a week) in the purchase of additional comforts, as milk, coffee, wheaten bread, cold meats, wine, beer, tobacco, &c.; or they may spend it in support of their families or in buying such clothes as they will need on their discharge. These arrangements, the report states, have worked well.

The most frequent violation of prison-rules are disobedience, rudeness to officers or comrades, refusal to work, and negligence in the performance of the assigned tasks.

The disciplinary punishments employed are: Admonition; coarse and unproductive work; temporary withdrawal of privileges; a bread-and-water diet—not given, however, oftener than on three alternate days in the week; irons, (only used in extreme cases;) hard bed, (either sack-ing or bare boards,) but not more frequently than bread and water; imprisonment in a cell, with employment, and at least two visits a day from an officer, but not exceeding a month, nor to be repeated till a full month shall have passed; removal to another part of the prison; and

confinement in a dark cell, not exceeding three weeks, after which a week must elapse before the prisoner can be returned to it.

An exact record is made of all punishments inflicted, and they are also inserted in a memorandum-book kept by each prisoner.

§ 2. Prisoners cannot shorten their sentences in Belgium by any fixed rule; but this may be done by act of royal clemency in the case of prisoners who are thought to deserve it, on the recommendation of the administrative boards, or boards of prison inspection. They receive a portion of their earnings according to the following tariff: Prisoners sentenced to hard labor receive three-tenths, those sentenced to reclusion four-tenths, and those sentenced correctionally five-tenths. This proportion cannot be increased. Other rewards, accorded to good conduct, to diligence, to zeal and progress in school and labor, and to meritorious actions of whatever kind, are as follows: Admission to places of trust, to domestic service, and to certain exceptional labors; an increase of the privilege of visits and of correspondence; permission to make use of tobacco, in the form of snuff or by smoking it at proper times; the grant of certain diversions and alleviations, such as the gift of books, engravings, tools, useful objects, &c.; propositions of clemency and of reduction of punishment.

The most frequent violations of prison rules are, in the cellular prisons, communications or attempted communications, verbal or written. In the congregate prisons they are infractions of the rule of silence and traffic.

The following are the disciplinary punishments in use: Privation of work, reading, gratuities, the *cantine*, visits, correspondence, and other indulgences granted in pursuance of the regulations; a diet of bread and water; confinement in a special cell, or in a dark cell, with or without the bread-and-water diet; the withdrawal of rewards which might otherwise have been granted.

All disciplinary punishments are recorded in a special register, together with the causes for which they were inflicted. The offenses committed and the punishments administered are also placed in the moral account opened with each prisoner.

§ 3. The report for Denmark states that the discipline is intended to be reformatory. For the cellular prison is established a sort of progressive system. In the associated prisons the inmates occupy separate sleeping-cells. The convicts work in divisions separate from each other. No complete progressive system has as yet been adopted; but such a system is in contemplation. The punishments for breach of discipline are determined by law. Corporal punishments are among them. The most efficacious means of awakening and preserving hope are, in the cellular prisons, the promotion to a higher class; in the associated prisons, wages paid for labor. Conditional release does not take place.

§ 4. The principle of abbreviating the sentences of prisoners, as constituting at once a stimulus and a reward of good conduct, has not yet been introduced into the French penitentiary discipline. This can only be done through the exercise of the pardoning power. Fixed rules are laid down to be followed in applications for clemency, which is generally dispensed in concert with the administrative and judicial authorities, and may therefore be presumed to be done intelligently and on the ground of merit.

In the central prisons the product of the labor is divided into tenths. A portion of these tenths is assigned to the convicts, and takes the name of *peculium*. The quota of tenths granted to the convicts is

determined by the nature of the punishments and the number of convictions incurred. The assignment is adjusted between the three classes thus: Correctionals, five-tenths; reclusionaries, four-tenths; those sentenced to hard labor, three-tenths. The part assigned to prisoners sentenced on relapse is reduced one tenth for each previous conviction, down to the limit of the last tenth, which is, under all circumstances, paid to the convict. The *peculium* is divided by moieties into *peculium* disposable and *peculium* reserved. The first is at the disposition of the convicts during their imprisonment for certain authorized uses, and especially for the purchase of supplementary provisions and supplies, for the relief of their families, and for voluntary restitutions. It also furnishes reserves for fines, punishments, breaking prison, or damages to the prejudice of the state or the contractor. The *peculium* reserved was established in view of securing to liberated prisoners some resources for their first necessities on their discharge from the penitentiary. The number of tenths allowed to convicts may be increased on account of their good conduct and diligence. There may be granted to them, in consideration of these qualities, even six-tenths. Other rewards accorded to convicts are: designation for employment as foreman of a workshop, monitor in the school, overseer of a dormitory, and other positions of trust, such as hospital attendants, store-keepers, secretaries, &c.; also a place on the roll of honor.

The moral offenses most frequently exhibited are theft, assaults, and indecencies. As regards the infractions of disciplinary rules, more than half the cases in the central prisons consist of violations of the law of silence. In most of the penitentiary establishments, next to that just named, the most frequent infractions are refusal to work, the secret use of tobacco, gambling, trafficking, and the unlawful possession of money.

Order and discipline are reported as maintained in all establishments dependent upon the penitentiary administration, without the necessity of a recourse to coercive measures of an excessive severity. Acts of rebellion and violence take place to only a limited extent, thanks to the vigorous enforcement of the rules intended to insure a strict but equitable distribution of disciplinary justice. The punishments, so far as the central prisons are concerned, are: Confinement in a cell, with or without irons; the hall of discipline; dry bread for three days or more; deprivation of the *cantine* or of the ordinary ration; the reduction of the tenths; fines; privation of correspondence and of visits; and sometimes the loss of an honorable position, such as that of foreman, overseer of a dormitory, monitor in the school, &c. The convict who has incurred disciplinary punishments cannot be placed on the roll of honor. Corporal punishments are expressly forbidden.

Every day (Sundays and feast-days excepted) the director of a central prison, assisted by his assessors, holds a tribunal of disciplinary justice, at which are required to appear prisoners reported on the previous evening as having committed some infraction. Each case is fully heard and fairly considered. It belongs to the director to pronounce judgment, and his decisions are immediately inscribed in a register kept for the purpose. Minutes are kept of the proceedings of each session. The punishments adjudged are inscribed by the schoolmaster on the bulletin of the moral statistics of the convict. In the houses of arrest, of justice, and of correction, the punishments are inflicted by the director or the chief keeper, and are inscribed on a special register, which is subject to the inspection of the prefect and the mayor.

§ 5. The German states report: The principle of provisional liberation has been adopted in the penal code of the German Empire.

(1) In Baden actual imprisonment may, by good conduct, be reduced one-fourth, provided, however, that a full year shall have been passed in confinement. The holder of a license may, at any time before the expiration of his sentence, have it revoked for misconduct or an infraction of its terms, in which case the time intervening between his provisional liberation and his re-arrest is wholly disregarded, and the prisoner is required to serve out his entire sentence as if he had not been released at all.

For the performance by the prisoner of the daily task required, which is equal to the average work of a free laborer, the sum of three kreutzers is placed to his credit. For additional work this sum may be increased to six kreutzers. To this reward diligence and the result of efficient work alone contribute, good conduct not being considered. Other rewards are special gratuities, the privilege of spending a part of their *peculium* in procuring increased comforts, better prison fare, such occupation as they like, and school prizes.

The offenses most common are forbidden communications with their fellow-prisoners.

The disciplinary punishments in use are: Reprimands; withdrawal of privileges; solitary confinement, with or without light; privation of bed; diminution of food and drink; and coercive chair, (the prisoner being bound to a solid chair.) A full record is kept of all punishments.

(2) The same rule in regard to the shortening of prison-sentences by good conduct holds in Bavaria as in Baden.

The proportion of their earnings allotted to prisoners varies from two to four kreutzers a day. In this award regard is had to good behavior as well as to industry and capability. Other rewards, given to act as an incentive to good, are: Permission to buy or receive extra articles of consumption; permission to receive more frequent visits and conduct a more extensive correspondence; formal praise or recognition; receiving better and more lucrative work; school prizes, (presents of books;) rewards for work, (presents of money up to four florins.)

The prison regulations oftenest violated are those which arise out of intercourse with other prisoners, namely: Exchange of articles of food and snuff; disobedience and brutality, such as opposition to officials, attacking fellow-prisoners, refusal to work, swearing, noisiness, and quarreling.

The disciplinary punishments are: Reproof; non-payment for labor up to four weeks; reduction of rations for a term of from eight to fourteen days; arrest, with or without work, to a period not exceeding four weeks; imprisonment in a dark cell for a term not exceeding ten days; and wearing of irons, but in such a manner as not to prevent the prisoner from walking. Corporal punishment is strictly forbidden by law.

Every punishment is entered in a book kept for the purpose; an extract from it is added to the documents furnished to each prisoner.

(3) The same regulation in regard to provisional liberation has place in Prussia as in Baden and Bavaria.

Prisoners may receive a part of their earnings, but never more than one-sixth. The exact proportion depends upon their good or bad conduct and the greater or less zeal they have shown at their work. They may dispose of one-half of this share in increasing their prison comforts; the other half is given to them on their release. Beyond the sixth of their earnings no other special rewards are granted to prisoners.

The most common infractions of prison rules in Prussia are: 1. Slight offenses against discipline, as neglecting to keep silence, disorder,

untidiness, and quarreling with fellow-prisoners. These infractions, in 1869, were 57 per cent. of the whole. 2. The violations of regulations are—improper, insolent, and rebellious conduct toward the officers. These were, in 1869, 24 per cent. 3. Those infractions of rules which consist in avoiding and escaping from work. These, in 1869, were 19 per cent.

The disciplinary punishments are: Degradation to the second class of prisoners; privation of the right of disposing of any part of their earnings; privation of the better treatment accorded on holidays; solitary imprisonment in punishment-cells, accompanied by various degrees of rigor; and whipping, only inflicted on men, with a limitation to thirty lashes.

An exact register of all punishments is kept.

(4) Prison discipline in Saxony has a twofold object: the satisfaction of justice and the reformation of the prisoner. Above all things, effort is made to revive and cherish hope in the heart of the criminal, the hope of improving his condition in the prison, the hope of shortening the term of imprisonment, the hope of a complete moral amendment, and the hope of regaining a respectable place in society. The administration thinks that the church, the school, and Sunday's instructions are the best means, in the hands of a sensible officer, for effecting moral reformation. It aims at making the prisoner understand that he can make progress neither in prison nor in civil life without radical and real amendment. The question whether a discipline founded on rewards or punishments is the more successful, is deemed almost superfluous, for it depends much on the individual character of the prisoner. By an order dated March 10, 1864, in consequence of the favorable results of experiments made during the previous ten years, disciplinary punishments were greatly reduced, and now consist in diminution of food, more or less severe imprisonment, and in withdrawing the recompense for work done. Corporal punishment with a rod or thin stick, up to thirty strokes, or punishment on laths, (the former only used against criminals of the lowest class of discipline,) is used under certain restrictions, and can only be applied after mature consideration and deliberation on the part of the officers. It is seldom used, and has, for example, not been applied in the penitentiary of Zwickau for the last ten years. Diligence is rewarded by a higher allowance, and good conduct places the prisoner in a higher class of discipline, or obtains for him a place of trust. A remission of part of the imprisonment is regarded by the prisoners as the highest reward. The administration makes it the termination of the three stages of discipline. The remission of part of the sentence has proved excellent in its results, for down to January 1, 1872, of 415 prisoners dismissed, only 11, or 2.65 per cent., relapsed.

(5) Probationary liberations have been introduced into Würtemberg since the enactment of a penal code for the German Empire. In cases where a question of the full pardon of a prisoner arises, his conduct is especially taken into consideration.

Industrious prisoners receive, for their application and good conduct, a part of their earnings; this part is fixed by the administration at one-fourth; but if their earnings exceed eight kreutzers per day, they can receive only two kreutzers. Prisoners who are distinguished for good conduct are encouraged by being placed in a higher class, by receiving more agreeable and more profitable employment, by being allowed more frequent communication with their friends and more liberty to make purchases out of their earnings, and by being recommended for pardon.

The chief disciplinary punishments are: restricted communication

with their relatives and friends; withdrawal or diminution of the part of their earnings usually granted to them; diminution of food; isolated imprisonment; and imprisonment in a dark cell. In prisons for reclusion, rods are also applied; corporal punishment is excluded. An exact register of punishments is kept.

§ 6. The end aimed at in the administration of penitentiary discipline in Italy is so to direct punishment that, without allowing it to lose its necessary characteristic of deterrence, it shall also possess the other equally essential requisite of reforming the delinquent. Nothing therefore is omitted to obtain this desirable end. While, on the one hand, it is instilled into the mind of the prisoner that he will be enabled, by good conduct, to ameliorate his condition; on the other, the end aimed at is to raise his sense of manly dignity, that he may not become a hypocrite. In the penitentiaries those who distinguish themselves by their good conduct enjoy special advantages, such as being intrusted with domestic work, being recommended to mercy, &c.

In the *bagnios* there has been established a system of progressive classification, under which prisoners, like the mercury in a thermometer, ascend and descend according to their deserts. Each class has its distinctive badge and special privileges. Those prisoners who have distinguished themselves by good conduct in the penitentiaries, and have worked out at least one-half their term, are removed to the agricultural colonies of Pianosa and Gorgona.

The administration is at present occupied in the study of a plan for sending to the island of Capraja (Tuscan Archipelago) those prisoners who have continued in their good conduct during their sojourn in the islands of Pianosa and Gorgona. The prisoners on reaching Capraja will enjoy a semi-liberty within the island, without, however, being quite free from certain disciplinary restraints. This is the Crofton intermediate prison.

The disciplinary system in the two classes of prisons noticed below, varying according to the nature of the sentences to be worked out in them, differs somewhat. In the penitentiaries the punishments in use are: admonitions, privation of food, solitary cells, fetters at the longest for twenty-four hours, solitary confinement from one to six months; while in the *bagnios*, besides admonitions, separate cells, and privation of food, there is also arrest, with or without fetters, the hard seat, &c.

The rewards in the penitentiaries are: the appropriation for the benefit of the prisoner of a quota of the profits arising from his labor; a more generous diet; the privilege of a less interrupted family correspondence; the right of disposing of a portion of the funds accruing from his work; admission into the schools; domestic employment; and recommendation to mercy. The rewards in the *bagnios* are: advancement from a lower to a higher class; elevation to positions of trust and responsibility; exemption from the fetters customarily worn in this class of prisons; and for those alone who have reached the highest class, recommendations to the royal clemency for a full pardon.

It is difficult to decide (so the report declares) which class of disciplinary punishments is most efficacious, the effect depending on many individual circumstances, which cannot be known, much less stated, in advance. Solitary confinement generally reduces to order and quietness even the most obstinate, and this because the individual so punished is withdrawn from the over-excitement produced by the recurrence of the spectacle in which he is both actor and witness. Corporal punishment is forbidden. By the regulations of 1826, flogging was a punishment assigned to a few grave misdemeanors; but this regulation

was modified in 1863, and since then flogging has not been inflicted in a solitary case.

The local director has authority to inflict the minor punishments; for heavier ones it is necessary to have the approval of a special council; the offending prisoner must be heard, and an official report must be drawn up. The more serious cannot be inflicted without notice being previously given to the central direction.

For the protection of the prisoners there exist the following provisions: A visiting commission (especially for the detention jails;) an authorized direct correspondence between the prisoner, the minister of the interior, the director-general, the central inspector, and the magisterial authorities; and a systematic inspection of the prisons by the local authorities and by the central inspectors.

No special discipline, it is held, can be applied to incorrigible convicts; but, as they may be kept in solitary confinement for the space of six months, they become impotent to disturb the discipline of the establishment. The central administration, however, fully recognizing the many benefits which would accrue from such a plan, proposes to set apart a penitentiary, where so stringent a discipline can be exercised as to render superfluous any extraordinary coercive measures, and therein to gather together that class of convicts which, by subtle art oftener than by open rebellion, encourages and prompts discontent among the prisoners, and thus foment a perpetual irritation, so obstructive to the quietness, confidence, and subordination which are the primary elements of a genuine moral rehabilitation.

§ 7. It is provided in the new criminal code of Mexico that offenders sentenced to ordinary imprisonment, or to reclusion, in an establishment of penal repression for two years or more, and who have uniformly behaved well during a period equal to half the time their confinement is to last, have the remaining period of imprisonment remitted conditionally. In this way offenders can not only obtain a diminution of their punishment, but also receive a free pardon, if they have, by their good conduct, shown themselves worthy of it. Any punishment, whether of ordinary imprisonment or of reclusion, in an establishment of penal repression, for two years or more, is to be converted into close confinement, in case the offender should have misbehaved himself during the second or third portion of his time.

All proceeds of the work of the prisoners is given to them if they have been condemned for political offenses or if they are detained for minor offenses against the law; but in the case of those condemned, for misdemeanor or felony, to imprisonment or reclusion, they have 25 per cent. of their earnings, if the punishment lasts more than five years, and 28 per cent., if the time is less. To the above percentages 5 per cent. more is added when a criminal has obtained, by good conduct, his preparatory liberty. Moreover, if he supports himself by his work out of the establishment, another 5 per cent. is added; and this may be increased until the allowance reaches 75 per cent. of the total amount. The advantage of this system is that prisoners are thus encouraged to support themselves by their work, and that they maintain with free persons an intercourse which may be useful, when they recover their liberty, in enabling them to earn their livelihood without returning to a career of crime.

Besides the favors above enumerated, prisoners can, by their good conduct, obtain others. They may enjoy, during the days and hours of rest, any amusement which the rules of the establishment permits. They may apply one-tenth of their reserve-fund to the purchase of any

articles of furniture or comfort which the rules do not prohibit. The kind of work which their sentence condemns them to perform may be commuted into one better suited to their education and habits.

§ 8. No diminution of the sentences awarded by the tribunals can be obtained as matter of legal right by prisoners confined in the jails and penitentiaries of the Netherlands. But, agreeably to a royal decree of 1856, the administrative commissions of the central prisons submit every year a proposition for pardons or remissions, to be granted to prisoners who have distinguished themselves by their good conduct. These propositions, however, include only persons who have been sentenced to more than three years, and who have undergone at least one-half of their punishment, and the remission never exceeds six months. Besides this, all prisoners have the ordinary resource of applying to the King for pardon or remission; and since, in general, a decision is made only after a report from the commission on the conduct of the prisoners, this conduct has, generally, a strong influence upon the decision.

The portion of their earnings allotted to the prisoners are: To civil prisoners sentenced to reclusion and to military prisoners, 40 per cent.; to the inmates of the central prisons, 50 per cent.; and to those confined in other prisons, 70 per cent. These proportions are not increased by reason of the prisoners' good conduct. No other rewards are given to prisoners beyond this participation in their earnings. The distribution of premiums has been abolished for some time, and the industry of the prisoners finds its recompense in the increase of profits, which naturally result from zeal and capacity. Still, the re-establishment of premiums is under consideration at the present moment.

The kinds and frequency of the violations of prison rules differ sensibly in different prisons, and often depend on the more or less intelligent administration of the chiefs and the employés. Insubordination and quarrels may be regarded as the most frequent infractions. Isolation by night (which is not yet generally introduced) has, in this respect, produced good fruits. The disciplinary punishments in use are: Restriction to a diet of bread and water; withdrawal of the privilege of writing and receiving letters; privation of books; the dungeon; fetters; and, in the central prisons, isolation in a cell. All these punishments are recorded in a register.

§ 9. The principle of provisional liberation, and, by consequence, that of the power of shortening the sentence by good conduct, has not been introduced into the criminal jurisprudence of Norway. Only by royal pardon may the duration of a fixed sentence be abridged; but, in deciding on the question of pardon, the behavior of the prisoner during his imprisonment is, as a matter of course, taken into consideration.

Prisoners do not receive any part of the proceeds of their labor. Formerly a certain part was allowed them, but the system was abandoned as not expedient. However, the question of introducing the same system to a greater or less extent, and in an altered manner, has again been raised. In regard to other rewards as a stimulus to self-control and self-exertion, in the houses of correction and the fortresses, an extra allowance of food and other small privileges are accorded to the well-behaved and deserving. For those in use in the penitentiary, reference is made to what has been said in the chapter on prison-systems.

The most frequent infractions of prison rules are: In the cell-prisons, communication with fellow-prisoners; in the other prisons, quarrels, illicit labor, attempts to escape, and laziness. Offenses against discipline are punished with bread and water, confinement in a dark cell, or

with privation of the extra allowance of food; in the prisons exclusive of the penitentiary, corporal punishment is also employed. The punishments are always inserted on the records.

§ 10. In Russia the discipline of the prisons seems to be in a lax and inchoate state. The principle of an abbreviation of sentence by means of good conduct and industry has been admitted only in imprisonment with hard labor, and even there awaits a regular organization and a systematic application. Russian law prescribes work for the prisoners, and grants them a part of their earnings, according to the particular class of prison. But this law still remains almost a dead-letter; it has been executed only in rare cases. The organization of industrial labor is regarded as lying at the root of the penitentiary improvements now under consideration by the government. One of the clauses in the project of reform relates to the proportion of earnings granted to the prisoners. No system of rewards has yet been established.

Drunkenness is reported as the most frequent breach of prison rules, and as having been often encouraged by the cupidity and want of fidelity of the employés.

The disciplinary punishments employed are the dungeon and sometimes castigation or irons. In the better-regulated prisons a record of the punishments is kept.

§ 11. Good conduct produces no abridgment of the time of imprisonment in Sweden. The King exercises the right of pardon almost exclusively in favor of prisoners sentenced to hard labor for life, and whose conduct for ten years has been unexceptionable.

Prisoners are encouraged by being allowed a share in the gain derived from their labor. In the associated prisons the amount received daily varies from one to seven cents of our money. This refers to the generality of prisoners; but those who act as foremen, as well as those who are distinguished for skill, get an additional sum rising sometimes as high as sixty centimes, equal to twelve cents.

In the cellular prisons in the provinces, in which the director procures both work and materials, the earnings of the prisoners sentenced to hard labor are distributed on the following scale: The prisoner receives two-sixths; the director for inspection and furniture two-sixths; the officers who exercise surveillance, one sixth; and, in order to provide help for the prisoner when liberated, the remaining sixth is put in a savings-box. Any prisoner who commits in prison an offense liable to punishment loses his share of the money placed in the savings-box. Of the two-sixths which the prisoner receives he may spend two-thirds in buying additional food, as bread, beer, cheese, lard, &c; but this expenditure must not exceed two francs per week. Those who work in the open air especially require this extra food. There are no other rewards to stimulate the prisoners' zeal.

In cellular prisons the most usual offenses are attempts to communicate with other prisoners, drawing and writing on the walls, and neglect of cleanliness. In the collective prisons the most frequent violations of regulations are insults in words and actions to officers and prisoners, attempts to procure spirits, cheating, and thefts.

In cellular prisons the punishments consist of withdrawal of bed-clothes, diminution of nourishment, or imprisonment in a dark cell for eight hours at most. This punishment is inflicted, on request, by the provincial government. In the associated prisons, besides the punishments just cited, there are added imprisonment, with or without labor, and for very grave offenses the bastinado on men; this last in rare

cases. Imprisonment in a cell for a period exceeding a month can only be by the central authority. An exact record is kept of all punishments.

§ 12. In all the cantons of Switzerland prisoners may, by their good conduct, obtain an abbreviation of their punishment by applying for pardon to the legislative authority, (great council,) which reserves to itself this right. Such reduction is rarely made conformably to fixed rules. In many of the cantons complaint is made that chance and caprice play too conspicuous a part, and that commissions of pardon do not always take account of grave and important facts. In some cantons clemency is exercised readily enough, while in others this is done only in exceptional cases.

In certain cantons a decree of the legislative authority confides to the council of state, or to the department of justice, or even to the police, the right of remitting the latter portion of their punishment (one-twelfth, for example) to convicts whose conduct has been good. In cantons where penitentiary reform has made some progress, there is a tendency to bring down the use of pardons to the minimum, and to substitute the principle of conditional liberation; in short, to confide this function to the direction of the department of prisons, which, having the supervision of the penitentiary administration, is alone capable of judging whether or not the re-entrance of a prisoner into society offers any danger, and whether a probationary liberation may be safely granted him.

In most of the cantons the prisoners have a share in the benefits of their labor. As a general thing this part has rather the character of a gratuity than that of lawful wages. The proportion varies in different prisons, and in the case of prisoners in different classes of the same prison, from 5 to 25 per cent. It is proposed by some of the wisest directors, Mr. Kühne, for example, of the penitentiary of St. Gall, to increase the proportion beyond 25 per cent. to the worthiest of the prisoners. Whatever may be the scale adopted in the different establishments, the gratuity is granted to all the prisoners who, conformably to the regulations, have rendered themselves worthy of it. It is adjusted at the end of every month or every three months, and is placed to their credit in their memorandum of savings.

The other rewards employed to stimulate the good conduct and zeal of the prisoners vary in kind and amount, according to the cantons and the degree, more or less advanced, of penitentiary reform. In well-administered establishments there are granted to good conduct, to application, to zeal, and progress in labor and school the following rewards: In the second penitentiary class, liberty to choose books from the library and to attend the lessons given in class, the use of tobacco—limited, however, to the hours of promenade in the exercise-yard—and liberty to have served to them a supplementary or extraordinary ration of food. In the third or higher class there are added to the above-mentioned rewards the privilege of promenade and free conversation with their fellow-prisoners of the same class, liberty to wear their beard, to work in their free hours for themselves and their families, to adorn their cells and to have plants in them, the use of a patch of land for a garden, and admission to places of trust—such as that of foreman—to superintend their fellow-prisoners in learning trades, or to execute certain exceptional labors in the administrative, industrial, and domestic services.

In the cantons where the old convict-prisons still exist, the most frequent offenses against discipline are disobedience and insubordination; next come escapes or attempts to escape; then lies; and finally immorality in acts and words. In the penitentiaries in which the Auburn

system has been introduced it is found that the infractions most frequent are disorder, want of cleanliness, and violation of the law of silence; in the penitentiaries of recent construction, the want of propriety and dignity, lying, idleness, and disobedience.

The disciplinary punishments in use may be divided into three classes: In the prisons whose organization is imperfect, and where the reformation of the prisoners is not the aim of the imprisonment, we find existing the dungeon and corporal punishments; in penitentiaries on the Auburn system, more or less completely organized, corporal punishments are gradually disappearing, and are replaced by a diet of bread and water and by confinement in the dark or ordinary cell; in the modern establishments there is coming into vogue a new series of punishments, of a moral order, among which figure, by the side of the dungeon and the diet of bread and water, admonition, privation of work, of reading, of visits, of correspondence, and, in general, of all or a part of the diversions, alleviations, and other indulgences above mentioned. Corporal chastisements are passing away, and in their place are substituted the strait-jacket and the cold-douche bath.

Those who, through mischief or negligence, destroy or injure the effects, objects, instruments, and raw material placed at their disposal, are obliged to pay the value of the damage done.

In most of the prisons are found registers in which the punishments inflicted are fully recorded. These registers, in the modern penitentiaries especially, give complete information as to the occasion, the kind, and the nature of the punishments inflicted.

§ 13. There are, perhaps, in the United States a thousand prisons large enough to have the word "discipline" applied to their management; and in these every variety of discipline, lack of discipline, and abuse of discipline are found. In many, little is sought beyond the security of the prisoner and the convenience of the prison-keeper; in many others, the discipline is intended mainly to be deterrent, but through laxity or severity becomes a stimulus to crime; in some, it is really deterrent without being reformatory in aim or result; in a great many, the nominal aim is reformation, but the reasonable means thereto are neglected; in a few, the wise combination of deterrent and reformatory means is attempted, and succeeds in one direction, or in both, according to the skill, opportunity, and perseverance of the prison government. But the great majority of prisons in the United States are, in fact, neither deterrent nor reformatory to any great extent; sometimes because no effort is made to comply with the laws—which almost everywhere require in terms this twofold discipline, though they do not often furnish suitable means—and sometimes because the best agencies are not employed, or are not continued persistently. The deterrent agencies are solitude, silence, hard fare, and constant labor; sometimes also severe punishments are employed. The reformatory agencies are instruction—secular and religious—industrial training, the encouragement of shortened sentences for good conduct, &c. By some of these means "it is sought to plant hope in the breast of the prisoner and keep it there;" and to these are added gratuities for work, the visits of philanthropic persons and of the prisoner's own family, and the promise of help in leading an honest life upon his discharge. Conditional pardon, which enters so largely into the Crofton prison system, has little place in ours, the commutation-laws, by which sentences are shortened for good behavior, being almost the only feature of the Crofton system much in use here, and that not very systematically.

Probably punishments are more relied on than rewards in governing

the prisons; but there is not much variety of either in most of them. Flogging is forbidden by law or usage in most of the States, but is practised in some prisons where it is forbidden. The same is true of the iron yoke, the shower-bath, the iron crown, suspension by the thumbs, and other modes of torture. Deprivation of privileges, solitary imprisonment—often in a dark cell—and wearing a ball and chain, are the most common punishments. Of rewards, the chief is a shortening of the sentence for good behavior; this, in truth, is about all there is that exerts much effect. The other rewards are petty privileges, such as better food, the use of tobacco, a light in the cell, &c. There is no exact mark-system, so far as is known to the undersigned, in any American prison, but there may be examples not yet made public.

§ 14. The principle of conditional release, or the power of abbreviating the term of sentence, is fully introduced into the English convict-prisons. The maximum of abbreviation is one-fourth of that part of the sentence passed in the public works or congregate prison, no account being made of the time spent in cellular separation. This remission is gained by industry alone, which is measured by marks, a certain number of which are accorded daily to the prisoner, according to his diligence. The diligence and zeal of the convict are further stimulated by a system of progressive classification, whereby he may pass through four classes during his term of sentence, viz, a probation, first, second, and third class; and certain selected prisoners are also placed, during the last year of their sentence, in a special class. The minimum stay of the convicts in each of the three lower classes is one year, and the remainder of the sentence may be passed in the first class, unless a prisoner is promoted during his last year into the special class. Every promotion is followed by certain privileges, and each class wears its own badge. Though limited, these privileges offer inducements which are keenly felt. They are, in addition to remission of sentence, more frequent communication by visit or letter with their friends, greater freedom for exercise on Sundays, and increased gratuities to be paid them on their release.

The disciplinary punishments in use are forfeiture of remission, degradation to a lower class, the loss of privileges gained by industry, solitary confinement, reduction of diet, corporal punishment, and so on.

The power of punishing a prisoner resides only in the governor and in the director.

The limits of punishment in both cases are laid down by the secretary of state, and no punishment can be awarded without full investigation of the charge conducted in the presence of the prisoners. The governor has powers sufficient to deal with minor offenses, and every punishment he orders is reported to the director with a statement of the prisoner's offense.

The director, whose functions correspond with those of a magistrate, awards punishments for offenses of a grave character. Only the director has power to award corporal punishment, and he only for certain offenses defined by the secretary of state, and after full inquiry on oath conducted in the most formal manner. No unusual punishments may be inflicted. Chains, handcuffs, or means of special restraint may not be made use of except under certain defined circumstances and under strict regulations, and the use of them is always reported and recorded in a formal manner. No officer is allowed to strike or abuse a prisoner. Should he find it necessary, on account of the violence of any prisoner, to make use of his weapons, he is always called upon to show that he confined

himself strictly to the necessities of the occasion, or, failing to do so, he must bear the consequences.

Every prisoner has the unrestricted right of appeal against the acts of those above him; he may lay his complaint in the first instance before the governor, who is bound to investigate it and to place the appeal on record; or he may appeal to the higher authority of the director, who can, if he sees fit, reverse the decision of the governor.

The director not coming in daily contact with the officers and prisoners, but only visiting the prison magisterially at uncertain intervals, it is of course felt that he can give a fresh and impartial consideration to any question or complaint.

Besides this the prisoners have the power of petitioning the secretary of state. They exercise freely their right of appeal and petition; and the effect of these provisions is not only that prisoners feel that they cannot be unfairly dealt with, but the officers are constantly reminded that they are liable to have to answer for any act which they may perform.

The plan by which it is sought to bring before the prisoner, in a form easily intelligible to him, the fact that, as in ordinary life, the advantages held out to him as an encouragement to industry are directly proportioned to his industry; that he cannot be idle for a day without a corresponding loss; that good conduct is necessary as well as industry, because ill-conduct will deprive him of the advantages he would gain by his industry—is, as has already been remarked, by a system of recording the industry by marks.

To every man is assigned the task of earning a number of marks proportioned to the length of his sentence. These marks may be earned either at the lowest rate, in which case he must serve out the whole of his sentence; or at the highest rate, when he gets about one-fourth of it remitted; or at some intermediate rate, by which he earns a proportionate remission.

The record by marks applies not only to the amount of remission which the prisoner can gain from his sentence, but also to every step of progress made during his imprisonment: for instance, he is required to pass at least a year in each class; but during that time he must earn a definite number of marks, or his promotion is delayed; and, further, the gratuity which he earns in each class is calculated according to the number of marks he earns.

Every prisoner is furnished with a card, on which, periodically, his earnings in marks are recorded; and if he feels himself unfairly dealt with, he has free right to complain, and his grievances are investigated.

In this manner, day by day, week by week, and year by year, he can count and record the progress he is making as regards promotion from class to class as well as in relation to the accumulation of money-credits, and the goal of all his endeavors—conditional liberation. He is thus made to see and feel that he has something to hope and work for beyond the mere avoidance of punishment.

§ 15. In Ireland, discipline is maintained chiefly by moral forces, viz, by rewards in the form of promotions from class to class, increased freedom and privileges—as merited by good conduct—gratuities, remission of part of sentence, &c., and by punishments, taking the shape of degradation from a higher to a lower class, reduction of food, and the like. Whipping is legal, but seldom employed.

All punishments are made matter of record.

The most common offenses are insolence, inattention, and unnecessary talk.

CHAPTER IV.

MORAL AND RELIGIOUS AGENCIES.

§ 1. In the Austrian prisons of all kinds, chaplains and religious teachers are provided for prisoners of every sect, of which the number is considerable. As, however, the greater number are of the Roman Catholic faith, every prison has a Roman Catholic chaplain, and, when the number of prisoners is sufficient to require so many, two or more. Besides holding divine service and administering the sacraments, the chaplains are under obligation to visit the prisoners individually, to seek to awaken the moral sense within them, to strengthen them by spiritual counsel and exhortation on their leaving the prison, and, in general, to labor, in season and out of season and by all suitable means, to reclaim and save them.

The highest importance is attached to the labors of the chaplains, since religious instruction is found the most effective means to acquaint them with the principles of morality and to lift them up from their moral degradation. Many prisoners have lost heart and have fallen into despondency and even despair, from which they find it impossible to raise themselves by their own unaided exertion. As a consequence, they have become callous and indifferent. Religion alone is capable of reconciling them to themselves, to society, and to God. It alone can restore hope to the criminal, the loss of which has been the chief cause of his continuance in a course of crime. Religious influences are, therefore, an essential agency in the moral improvement of prisoners.

Formerly volunteer visitors were excluded from the prisons. The law of April, 1872, permits the visitation of cell-prisons by members of societies which occupy themselves with the care and improvement of discharged prisoners.

There are no Sunday-schools in the Austrian prisons, in the American sense of that institution; but, on Sundays and all church-festival days, lectures are delivered to the prisoners on various subjects of scientific and popular interest.

The frequency with which letters may be written by the inmates of the Austrian prisons is not stated. They write and receive letters by leave of the director, who must in all cases read and countersign them. The correspondence of prisoners with their friends is found to have an excellent effect upon them, keeping up family ties and counteracting the evil influences of prison-life.

Prisoners, with the consent of the director, may, from time to time, receive the visits of their families and friends, provided these latter are of good repute, and otherwise unobjectionable. Visits take place in the conversation-room, except in the case of sick prisoners, and in the presence of an official. They cannot last beyond a half-hour, must be in a language understood by the official present, and must relate to matters approved by him. Their moral effect is generally favorable, as in the case of correspondence.

§ 2. The Belgian government attaches the highest importance to religious instruction as a means of reformation, and has given to it the most complete organization possible. Chaplains are provided in all prisons and for all religions, and the rules require them to preside at the exercises of worship and over all religious instruction, to visit the prisoners in their cells and give them counsel and consolations; to press upon their conscience the diligent performance of all religious and

moral duties, to direct their reading, to hear their confessions, to give special instructions to those ignorant of the essential truths of religion, in a word, to fulfill toward them all the duties of their ministry.

Prisoners sentenced to correctional imprisonment are permitted to write letters every fortnight, those sentenced to reclusion once a month, and those sentenced to hard labor (*travaux forcés*) once every two months. The privilege is granted oftener in urgent cases. The effect is evidently good. It maintains or renews the ties of home and kindred, and aids the officers in the study of the prisoner's character.

Prisoners are allowed to receive the visits of their relatives—father, mother, husband, wife, children, brothers, sisters, uncles, aunts—and guardians, on the production of a certificate granted by the local authority of the places where they reside, authenticating their identity. No other visits are permitted except upon a written order of the superior administration, of the governor of the province, or of the president or one of the members of the commission specially delegated to this effect. In the penal prisons more particularly, these visits take place in the conversation-rooms, in presence of a keeper. This officer observes the persons of the prisoner and the visitor, without interfering with the privacy of the interview. The moral influence of these visits is generally good. The cases are rare (but such have occurred) in which the effect has been unfavorable.

§ 3. In Denmark a clergyman is appointed to each prison. He alone is intrusted with the religious teaching of the prisoners. Volunteer visitors are not permitted to labor in the prisons for the moral improvement of the inmates.

§ 4. In the smaller departmental prisons of France some parish priest acts as chaplain, but in the larger prisons of this class, as well as in all central prisons, the chaplain is a regular officer of the establishment, and is wholly devoted to its religious service. Liberty of conscience is guaranteed to prisoners of all religions. On his entrance, every prisoner must declare to what faith he adheres, which declaration is verified by an administrative information. If he does not belong to the Roman Catholic religion, he is transferred, whenever it is possible, to a prison designed to receive persons of the same religious faith with himself.

In the large penitentiary establishments, the chaplains consult with the directors in determining upon the various religious offices and services. They visit the infirmaries, the sick, the places of punishment, and the solitary cells. In the sessions of the tribunals at the *pretorium* of disciplinary justice, they are entitled to a place among the assessors of the director. To prisoners who are prevented, by their age or infirmities, from taking part in the labors of the evening, they give moral, religious, or instructive readings. They are called upon to give their advice on propositions for the exercise of executive clemency.

No volunteer visitor is admitted into the prisons to labor for the moral regeneration of the prisoners without a special authorization from the minister of the interior; but there exist, for the departmental prisons, commissions of supervision, (*surveillance*), composed of men held in the highest esteem, whose mission is to watch over the entire management, and particularly over everything relating to the reformation of the prisoners. Commissions of this sort have not, hitherto, performed any services in the central prisons.

No Sunday-school, properly so called, exists in the French prisons. Yet, with a view to avert the dangers of protracted idleness, the heads of a number of penitentiary establishments have organized an hour of

school on Sunday, and the administration has generalized this innovation.

In the departmental prisons a special regulation of the administration determines the days and hours on which attention must be given to correspondence. In the central prisons, the prisoner has the privilege of writing once a month to his family. He can correspond only with his nearer relatives or his guardian. The director is charged with the duty of examining the correspondence of the prisoners both ways.

Beyond cases of special authorization, convicts can receive only the visits of father, mother, wife, husband, brother, sister, uncle, aunt, and guardian. During the visit, which does not ordinarily exceed twenty to twenty-five minutes, an officer is always present.

The moral effect of the visits received, as of the correspondence carried on, by the prisoners, is, in general, rather good than bad.

§ 5. The German states reported:

(1) The highest value is attached in Baden to religious instruction in prisons. Chaplains are provided for all prisons and for all religions. They hold religious service, give religious lessons, enter into religious conversation with the prisoners, inspect the prison schools, keep an eye on the prisoners' occupations during their relaxation, and correspond with the ministers of their abode; this correspondence gives moral protection to the prisoners after their liberation. It is their duty to give particular attention to sick prisoners, to those depressed in spirit, or showing any tendency to insanity. They visit the sick weekly, and the other prisoners at least every fortnight. It is their duty at these visits to awaken, so far as possible, moral and religious feeling in the prisoners, and to further their reformation.

No volunteer visitors are admitted into the prisons to labor for the moral benefit of the inmates.

There are no Sunday-schools in the prisons of Baden.

Prisoners have liberty to write to their friends once a month; but correspondence with inspectors, the minister of justice, and the superior courts is unrestricted. Their correspondence has generally a beneficial influence on the prisoners, none being allowed which can in any way interfere with the punishment. All letters sent or received are read by the director or the chaplain.

Visits may be received, of right, monthly, and oftener, as in the case of correspondence, by special leave of the director. They take place in the presence of an officer, the visitor and prisoner remaining separated. Their influence is found to be, in the main, beneficial.

(2) In Bavaria, all the larger prisons have chaplains wholly devoted to the duties of their office; in the district and police prisons, the clergyman of the place officiates. The regular chaplain is bound to hold divine service in the forenoon of every Sunday and holiday and on the King's birthday, and in the afternoon of Sunday to give one hour's reading or exhortation, and to hold a religious service on one week-day; to administer the sacrament to sick prisoners when they demand it, and to those in health once every three months; to give religious instruction twice a week for one hour; to visit the prisoners confined in cells at least every fortnight; to correspond with the clergymen of the places to which the prisoners belong; and to act as librarian.

Volunteer religious workers are not admitted.

There are no Sunday-schools in the prisons, but on that day instruction in drawing is given to the prisoners.

There appear to be no stated periods for writing letters; the only condition would seem to be permission by the director. All letters, going

out or coming in, are examined by the director. Their correspondence has a beneficial effect on the prisoners. If the ties of family have been broken, they are thereby re-knit; if otherwise, they are made stronger.

Prisoners may receive visits at any time by leave of the director. The visits are not to last usually beyond fifteen minutes; they must be in the presence of an officer, and must be carried on audibly, and in a language understood by him. The visitor may neither give nor receive anything from the prisoner.

The influence of these visits upon the prisoners, like that of their correspondence, is found to be useful rather than injurious.

(3) Chaplains are found in all the prisons of Prussia, and for all forms of worship. They hold divine service every Sunday and once during the week; administer the sacrament to the prisoners at stated periods; give religious instruction; superintend the primary instruction given by the schoolmasters; are bound to labor seriously for the salvation of the souls of the prisoners; and, with this aim, must visit them regularly in their cells and in the infirmary.

In all instruction given to adult prisoners, the aim is not so much to impart new knowledge, either useful or necessary, as to teach them to reflect, and to liberate them from that sad brutishness which is so often the chief cause of their crimes. The less instruction is an exercise of mere memory, and the less it demands a mere mechanical activity, the more it engages the attention of the entire man, and the more it acts at once on heart and intellect; and to that extent it the more efficaciously fulfils its highest purpose.

It is held in Prussia that the unchanging truths of religion and morality, when taught in a worthy and striking manner, best fulfil the highest aims of instruction and are richest in satisfactory results. Such instruction in prisons is, therefore, regarded as one of the most important means for the moral reformation of the prisoners.

Private persons who are known to have great interest in all that concerns prisons, and who possess a high moral character, may, at their request, have admission into the prison, with a view to labor for the moral and spiritual well-being of the prisoners.

There are many Sunday-schools in the prisons of Prussia, but neither the manner of conducting them nor their results are stated.

Prisoners must have special permission from the director before they can either write or receive letters; but such permission is withheld only in exceptional cases. All letters are read by the administration. The chaplain generally delivers the letters addressed to the prisoners; he takes this occasion for acquiring a knowledge of their relations and their affairs, and seizes any opportunity he may thus have of inducing them to seek eternal life. Such correspondence with their friends and relatives as is permitted has, in general, a beneficial effect on the prisoners.

Visits to prisoners are only exceptionally allowed, and when the visitor's character is above suspicion. They are made in a room appropriated to the purpose and in the presence of an official charged with listening to the conversation. Their general moral effect is good, and both visits and correspondence are regarded as an efficacious remedy for the despair and wretchedness which so readily take possession of prisoners.

(4) In Saxony, the religious wants of prisoners are equally regarded and cared for, whatever their creed may be. Just as in every truly religious household all the members must mutually help to attain what is desired, so in the Saxon prisons (it is claimed) everything is arranged for the purpose of promoting, above all, moral education by common worship of God and individual care of the soul. But the use of extra-

ordinary moral agencies is not allowed. It is alleged that they have been found unpractical, and that prisoners place little confidence in strangers. Consequently casual visitors are not admitted, even though their purpose be the moral improvement of the prisoners.

(5) In all the prisons of Württemberg there are Protestant and Catholic chaplains. Their duties are to hold divine service on Sundays and festival-days, and to give once a week religious instruction to the prisoners of their respective creeds and general pastoral counsel on all suitable occasions. For prisoners of the Jewish faith there is similar provision for religious instruction. The labors of the chaplains are declared to be most valuable and beneficial in their results.

Permission is not given to volunteer laborers to enter the prisons on missions of benevolence to the prisoners.

Prisoners are allowed, under certain restrictions, to receive visits from their friends and to correspond with them. The regulations and results are much the same as in the other German prisons mentioned in this section.

§ 6. Under the head of *moral and religious agencies*, the supreme director of prisons in Italy, in his report submitted to the congress, holds the following language:

No one will deny that religion has an immense influence over man; but to exercise that influence it is necessary that religion should be sincere and implanted in the heart, and it is in no wise to be confounded with superstition or prejudice. There is no doubt, therefore, that, with those prisoners who have that innate religious sentiment, practical acts of piety and the exhortations of the chaplains have weight; but with the remainder, though it be well that the ministers of religion should do all in their power to implant religious feeling, and though the administration neglects nothing which seems conducive to this end, yet it does not consider *moral* agencies of minor importance, and the greatest of these is the good example to be set before the delinquents by the behavior of the directing officers and jailors.

In some provinces voluntary or semi-official visitors were formerly admitted into the prisons, and the government still allows such; but the administration does not deem it expedient to pass an opinion as to their practical usefulness so long as the commission for penitentiary reform is still deliberating on this important question.

§ 7. All the prisons of Mexico do not have chaplains, nor, when they have such, do they also have them for all denominations. Even where chaplains are appointed, they have no well-defined official duties to perform, except so far as their ecclesiastical functions are concerned, and their duty of course is always to advise and comfort the prisoner and direct him toward reformation. Religion is believed to be the most valuable means of reforming the prisoner. On the days and during the hours allowed by the rules, the doors of the prison are open not only to the members of the protective boards, but also to all persons who, according to the judgment of the council of vigilance, (*junta de vigilancia*), are capable of contributing to the moral improvement of the prisoners. Sunday-schools exist in some prisons, in others not. The favor of writing and receiving letters is generally limited. The results of this correspondence are not very satisfactory.

Formerly prisoners could be visited by all their friends; now only those persons are admitted who have leave of the council of vigilance, when they are believed by the members of that body capable of improving the moral condition of the prisoners by their advice and their example. In that case there is thought to be no necessity to employ any one to listen to the conversations.

§ 8. There are no chaplains, as such, attached exclusively to any of the prisons of the Netherlands; but, in all the central prisons, in all the

houses of detention, and in the greater part of the houses of arrest, the office of chaplain and the religious services are confided to one of the parish ministers of each religion, who is named by the minister of justice. The duties of the chaplain consist in performing religious service on Sundays and feast-days, in making pastoral visits, and in imparting religious instruction. Religious instruction, given with intelligence, is considered of great importance as an agency in the reformation of prisoners. In some prisons there has been introduced the system of proverbs. This consists in hanging on the walls of the corridors and cells pithy moral sentences, and in changing them from time to time. In the opinion of experienced persons, this plan deserves to be recommended for general use.

Persons of both sexes, outside of the administration, are admitted into the prisons to labor among the prisoners, with a view to their moral regeneration. In some cities there are private associations to visit the prisoners, organized by the National Society for the Moral Amelioration of Prisoners.

Sunday-schools have not been established in the prisons of the Netherlands.

The administration of each prison regulates the correspondence of the prisoners as it judges most expedient. There is no general rule upon the subject. All the letters received or written by the prisoners are subjected to the inspection of the directors, and are withheld when their contents are improper. There is, therefore, no ground to apprehend injurious effects, and, in general, the correspondence of the prisoners is attended with a beneficial influence.

The prisoners are permitted to receive the visits of their friends as often, generally, as once a month. A grating separates the prisoner from his visitor, and an employé is always present to supervise the interview, which, as a general thing, may not exceed a quarter of an hour. They cannot converse privately. As in the case of the correspondence, it may be said that the general effect of these visits is good.

§ 9. Every convict-prison in Norway has its chaplain of the Evangelical Lutheran confession, to which faith almost all the people of Norway belong. In the minor district prisons, spiritual assistance is generally afforded by the parish minister of the district where the prison is situated. To the chaplains it belongs to conduct divine service in the prisons and to labor for the reformation of their inmates by the further agencies of personal conversation, admonition, and instruction.

Religious lessons are regarded in Norway as a very effective agent in the reformation of imprisoned criminals.

Sunday-schools exist in most of the convict or hard-labor prisons, but persons outside of the administration are not admitted for moral labor within the prisons.

Correspondence and visits are permitted to the prisoners under due restrictions, and the moral effect in both cases is found to be good.

§ 10. In all the large prisons of Russia there are chapels and chaplains. Prisoners of all the different creeds receive the offices of religion from ministers of their own faith, even Jews and Mussulmans.

The report on the prisons of Russia, as already stated in a previous chapter, was drawn up by Count Sollohub, president of the imperial commission on prison reform for that empire. On the subject of religious instruction in prisons the distinguished count holds this language :

In the present condition of things, the duties of the chaplains rest rather on the performance of religious ceremonies than on the giving of formal instruction. Viewed in its relation to the actual state of things in the country, I find no disadvantages in this

arrangement. Ceremonies speak to the eye and the heart. Religious instruction requires in the priests who undertake it the largest charity and a high civilization. The aggressive principle of the gospel, when disconnected from material interests, is certainly the crown of the servant of God, but this work would require a special clergy trained for the purpose of this particular mission. In addition to the education of those who speak, those who hear must likewise be educated, that they may understand as well as listen. It is impossible to deny the importance of religious worship and instruction, but I think in all things excess is pernicious. A man in more favorable conditions than a prisoner would immediately lose patience if he had to listen only to exhortations to virtue and repentance. The prisoner, having no means of resistance, buries in his heart a hatred which makes repentance impossible, or assumes a hypocritical garb of piety, in the hope of gaining something by it. I think I am not mistaken in affirming that the desire to reform prisoners has often been wanting in an intelligent comprehension of human nature. Virtue is not manufactured by formal methods; such methods can only produce the absence of vice, not the presence of individual morality, which is able to withstand all the assaults of temptation. I have found out by experience that we have many more chances of success when we appeal to men through their interests than through merely their good sentiments, and that, by removing from them the opportunity of doing evil, we naturally lead them to do well, while we fail to turn them from vice by wearying sermons. At the same time I should rigorously insist on attendance at divine service on Sunday, on daily prayers, and on religious instruction in all central prisons. But I think that religious reformation should not be the declared object, but left to develop itself in proportion as hope and confidence re-enter the heart of the criminal, and as he comes to see that his own welfare depends on his reconciliation to society.

It would appear that private persons are, to a certain extent, permitted to visit and seek the moral regeneration of prisoners. On this subject the count says:

There are few persons in Russia who devote themselves to the moral reform of prisoners. Some remarkable exceptions exist; among others, Dr. Hase, who has left behind him a touching celebrity for his efforts in that direction.

There are no Sunday-schools in Russian prisons, such as they exist among us. But in most prisons of any size, discussions on scientific subjects are held on Sunday, in which the prisoners take a lively interest.

As regards the correspondence of prisoners, it is permitted under the necessary limitations; but since the greater part of the prisoners can neither read nor write, the matter becomes of comparatively little consequence.

Visits from relatives are permitted, but with due restrictions. The effect of these visits, in a moral point of view, depends on the morality of the visitors. The reporter adds:

I do not suppose that parents coming to visit their children could injure them. Moreover, I regard that degree of disciplinary punishment which suspends the right of receiving all such visits, without exception, as unjust and unwise, particularly as it often punishes the visitors much more than it does the prisoners.

§ 11. Only Lutheran chaplains are employed in the prisons of Sweden. Few prisoners are found in them of any other religious belief.

The duties of the chaplain are to hold divine service, administer the sacraments, and give religious instruction; to ascertain by conversation the state of the prisoners' minds, and seek their reformation; to take charge of the library and church registers, in which latter he enters observations on each prisoner's manner of life and conduct. If the chaplain is equal to his high mission and zealous in its duties, the faculties of the prisoners are considerably developed; they gain a clear perception of justice; and many of them are led to form a firm resolve to live in future an honest life.

Sunday-schools are found in a few prisons, but they are exceptions to a general rule. Where they exist, they have a beneficial effect.

Persons not connected with the administration can have access to the prisoners only by special permission. Men of high character, and, known to be prudent and capable of laboring for their moral reforma-

tion, are readily permitted to visit them. In the prisons for women well-known ladies have obtained leave to visit the prisoners on Sunday to instruct them, and give them practice in singing.

The privilege of correspondence is pretty freely granted to prisoners, particularly with their nearest relatives, and is found to have a good influence on them.

As regards visits, prisoners awaiting trial, and those sentenced correctionally, have a large license; but those sentenced to hard labor cannot see even their nearest of kin without special permission from the director. Visits are always made in the presence of the director or of an officer detailed to that duty. Duly regulated, they have no bad effect.

§ 12. Ministers of the Reformed and of the Catholic religion act as chaplains in the prisons of Switzerland. The rabbi of the nearest locality is invited to visit such co-religionists as are occasionally found in them.

In the establishments which are imperfectly organized, the chaplains, for the most part, confine themselves to the celebration of public worship. In proportion as the prisons approach the category of penitentiaries that aim at the reformation of the prisoners, these officers are seen paying regular visits to them, consoling and counseling them, superintending the religious instruction of the juvenile delinquents, and fulfilling toward them all the duties of their ministry.

Religious instruction, as a means of reforming prisoners, is looked upon in Switzerland as of the highest importance and as exercising the happiest influence, particularly if the person charged with it possesses the special aptitudes suited to the high mission which he is called to fulfill, and throws aside, as far as he may, mere dogmatic questions. Prisoners in whose heart the religious sentiment is not extinguished at the time of their entrance are easily impressed by the exhortations of the chaplains; on the other hand, such as do not possess it offer to the instructions of religion a soil arid and ungrateful. Among prisoners self-deception and hypocrisy are not unfrequently met with; yet it often happens that individuals who reject or are ignorant of the Bible end by finding in its pages the consolation of which they are in pursuit.

Sunday-schools, properly so called, do not exist in the Swiss prisons. At Zürich the chaplain holds a catechetical exercise in the afternoon, and afterward an instructor gives a lesson in sacred music.

Persons of both sexes, not connected with the administration, are admitted into the prisons to labor for the moral improvement of the prisoners. In the cantons which have new penitentiaries, such persons are authorized to visit the prisoners in virtue of decrees of the legislative authorities. This is especially the case with members of aid societies, who have free access to the prisoners whom they seek to succor.

In the female penitentiaries lady patronesses are frequently met with, especially in the cities which were visited in 1839 by Elizabeth Fry, and where, at the instance of that good and charitable woman, ladies' aid societies were organized to console, to place, to watch over, and to sustain criminal women. At Zürich, where a society of this kind exists, the lady patronesses give to the female prisoners in the penitentiaries regular lessons and take charge of their religious instruction.

The privilege of correspondence with friends is accorded, but under different regulations and with greater or less frequency in different cantons.

In the establishments where the progressive Crofton system has been introduced, prisoners of the middle class can write letters every two

months, those of the higher class every month. But an extension of this favor is often granted, especially in cases where the correspondence is of such a character as to draw closer the ties of family, to exert a good influence, and contribute to the moral cure of the prisoner. This powerful means of moral reformation is more or less neglected in establishments where the organization is imperfect. As the letters pass under the inspection of the director, his eye sometimes detects sentiments which have their taint of hypocrisy; but, in spite of that, the correspondence of the prisoners manifests a strong family affection, and awakens tender household memories.

The visits of relations and intimate acquaintances are permitted the same as correspondence, and are most carefully regulated in the prisons where penitentiary education receives the greatest attention. The internal regulations of different penitentiaries grant the indulgence of visits more or less frequently, but the average is about once a month. As in the case of correspondence, an extension of this privilege is often accorded when the visits are found to have a salutary effect.

§ 13. The American report on this branch of the general subject is exceedingly meager, and appears to the undersigned, with all possible respect to the eminent and noble-hearted author, not quite just to the chaplains of our higher prisons, which alone, for the most part, of American prisons, have an officer of that class. There is scarcely a county jail in the country which enjoys the services of even a nominal chaplain, and it is doubtful whether there is one which has such an officer exclusively devoted to the moral and spiritual welfare of its inmates. Most of the state-prisons have chaplains, but few, it is believed, of the prisons holding a middle ground between the state-prison and the county jail have them. The report represents indifferent chaplains as the rule, good and effective ones as the exception. The undersigned would reverse this order. He has had personal knowledge of many of these gentlemen, and, as a class, he cannot help regarding them as earnest, devoted, hard-working, useful prison officers, and, he is sorry to be compelled to add, very ill-paid for the work they do. It has often been matter of wonder to him that men so competent could be had for a compensation so disproportioned to both the amount and the value of the service rendered. He has known instances in which the services of chaplains have been sought by wealthy churches, at largely increased rates of remuneration, and in which they nevertheless resisted the tempting call and remained in their humbler position of prison pastor, from love to the Master and to those in whom, all fallen and criminal as they are, He has deigned to declare that He is Himself visited and ministered to. However large the prison may be, even though it contain an average population of a thousand or more souls, there is seldom, if ever, more than one chaplain; and he is charged, not only with the spiritual care of this immense multitude, but also with the oversight of the prisoners' correspondence and with that of the library, superadded to all which is not unfrequently the giving, or at least the superintending, of scholastic instruction.

Most of our state-prisons, and some of a lower grade, have Sunday-schools, large and flourishing; not a few have weekly prayer-meetings, which are attended by prisoners varying in number from a score or so to several hundred. Into most of our prisons workers from outside, of known prudence and piety, are freely admitted to labor, in a variety of ways, for the moral and spiritual benefit of the convicts, in most cases (not in all) with excellent effect.

Correspondence and visits of friends are permitted in all prisons, but

under a variety of regulations and restrictions too numerous for statement. The general testimony of wardens and chaplains is that the effect of both is beneficial rather than otherwise.

§ 14. In England, every convict-prison has its staff of ministers of religion, who hold two religious services on Sunday and morning prayers daily, besides performing all the ordinary pastoral duties during the week. For the most part, the chaplains are not permitted to have any other occupations than those appertaining to their office, thus being left free to devote their whole time to the improvement of the prisoners placed under their spiritual care. The advantage of thus inculcating religious truth and seeking to awake religious feeling is held to be incontestible, and notwithstanding the doubts which have been called out by injudicious exaggeration of the results of these influences, the advantages thus afforded are much appreciated by prisoners, and the exertions of the ministers of religion bear perhaps as much fruit as in the world outside.

Volunteer working visitors are not admitted into the convict-prisons.

Periodical letters to respectable acquaintances are allowed, the frequency varying according to the class. The same is true as regards the receiving of visits. Both privileges are found to be beneficial in their influence on the convicts.

All county and borough jails in England are provided with chaplains. Their duties are substantially the same as those of the chaplains of convict-prisons. No Sunday-schools exist in these prisons and no volunteer workers are admitted.

Letters may be written and visits received by prisoners on the expiration of the first three months of their imprisonment; but as a very small proportion of the inmates remain three months, and not one in a thousand six months, it would seem to be, in regard to the mass, but a barren privilege.

§ 15. The regulations and usages of the Irish convict-prisons are substantially the same as those of England in all that relates to the general subject-matter treated of in the present chapter.

No official report was made to the congress in so far as the borough and county prisons of Ireland are concerned.

CHAPTER V.

SCHOLASTIC EDUCATION.

§ 1. The average proportion of prisoners unable to read, in Austria, on their commitment, was, during the years 1868, 1869, and 1870, 38 per cent. of men and 50 per cent. of women.

As a rule, all Austrian prisons are provided with schools. All prisoners of a suitable age to learn, (thirty-five years and under,) and who are either wholly illiterate or of defective attainments, are required to attend the prison school.

The subjects taught are the common primary branches, together with composition, the elements of natural history, physics, geography and history, and, in rare cases, drawing and geometry. Besides this, in all the prisons for men, instruction in vocal and instrumental music is given, but only as a reward of merit and to such prisoners as possess musical gifts. The progress made in the schools is satisfactory.

Libraries have existed in the prisons only during the last few years.

The works selected are, besides those of a religious character, popular works on history, geography, natural history, physics, husbandry, technical subjects, and political economy, books of an entertaining and instructive character, as biographies of celebrated men, accounts of travels, descriptions of customs and manners, and moral tales. The use of the libraries is constantly increasing. Those who are able to read receive books for themselves; for those in associated confinement who are unable to read, readers are appointed. Preference is generally given to tales, travels, and biographical sketches. Only prisoners of some education ask for books of a higher standard. The influence of this reading is exceedingly good, not only because the keeping of order and quietness is thereby greatly assisted, but because the mind of the prisoner is in this way withdrawn from his every-day life, directed to new objects, stirred to higher and better thoughts, and thereby unconsciously ennobled.

§ 2. In Belgium, 49 per cent. of the prisoners when committed are unable to read. Every prison with fifty inmates or more has a school or a teaching lecturer. At the penitentiary of Louvain, attendance is obligatory on all prisoners; at Ghent, it is obligatory on all under thirty years of age, and is permitted to those who have passed that limit. In other prisons, attendance is obligatory on all juvenile delinquents and on all adult prisoners who, having a sentence of at least six months, are under forty; it is permitted to all others. The instruction given in the penitentiary schools includes religion—which is taught by the chaplains or under their immediate direction—morals, reading, writing, arithmetic, elementary notions of grammar, history and geography—particularly the history and geography of Belgium—the elements of geometry and linear drawing in their relations with trades, and other branches of a practical utility. Great progress is made by the prisoners in these studies.

Libraries are found in all the prisons of Belgium. They contain three classes of works, which meet three several wants: that of reforming the prisoners, that of instructing them, and that of diverting their minds by the reading of books at once entertaining, moral, and instructive.

The prisoners are very fond of reading, and spend much time in it. The influence of these readings is found to be excellent, and the formation of prison libraries (it is thought) cannot be made with too much care and discrimination.

§ 3. In Denmark one or two school-masters are appointed to each prison. Prisoners under eighteen, who are only isolated at night, receive a special treatment, with two or three hours' instruction a day. In cellular prisons, convicts under forty receive two to three hours' instruction a week. In the associate prisons, instruction is only given on Sundays. Every prison has school-rooms and a library.

§ 4. The average proportion of adult prisoners unable to read in the French prisons on their committal is 56 per cent.; of juvenile prisoners 81 per cent. are found wholly illiterate.

The organization of primary instruction in the prisons of France dates back to 1819. In virtue of a decree of December 26 of that year, primary instruction, embracing reading and the first elements of calculation, was required to be given to prisoners, following, as far as their number permitted, the method of mutual instruction. Since that time the administration has established schools in all the important prisons. In 1866, the minister of the interior ordered that a greater extension be given to primary instruction, and required that almost the entire prison-

population should be made to share in it, with the exception of old men, invalids, and those whose perversity requires their exclusion. The instruction given in the prison schools comprises reading, writing, the first four rules of arithmetic, and the legal system of weights and measures. To this list of branches may be added mental calculation, surveying, linear drawing, and general notions on the geography and history of France. The administration has not been able, thus far, to allow all the prisoners to participate in the benefits of primary instruction. While striving to give a stronger impulse to instruction, it has been obliged to discriminate, in admitting prisoners to the school, by receiving first the youngest, afterward adults, and among the latter those whose conduct is the most satisfactory.

The progress made by the prisoners is generally rather slow, owing to the little aptitude of the greater part of them. Many who entered wholly illiterate leave the prison knowing how to read, to write passably well, and to perform the simpler operations of arithmetic; but a complete elementary education is rare. The administration has not been as well satisfied as it could have wished with the results of the instruction given in the prisons; and it is at this moment engaged in seeking new methods of instruction and a better organization of the schools in the penitentiary establishments.

The prison libraries include works for Catholics, Protestants, and Israelites, which are intended to serve for their moral and religious instruction; also, books of history, accounts of voyages, literary works, treatises on ordinary and technical science, novels, and miscellaneous works. These books are examined with care by the council of general inspection of the prisons. The works of piety admitted by each religion are designated only on the recommendation of the ministers of the different religions. The catalogue contains special indication of the books more particularly adapted to men, to women, and to children. At this moment the superior administration is engaged in re-organizing and enlarging libraries in all the penitentiary establishments.

The prisoners are generally fond of reading. Those who have a knowledge of this art nearly always profit from the practice of it. They have their Sundays for reading, and on week-days they read during the hours of rest and at meals. In some establishments there are readings in common to convicts who are unoccupied and to others during the intervals of labor. Sometimes such readings are given during meal-time in the refectory. The prisoners listen to them with interest, but those who know how prefer to read to themselves. The distribution of books takes place under the superintendence of the instructor or the chaplain, who, in his selection, has regard to the antecedents, the aptitudes, and the conduct of each prisoner; and the officers charged with this duty perform it in such manner as to cultivate a taste for reading by all the means which are consistent with the exigencies of the service. Books specially written for prisoners are not those which they prefer. They read with greater pleasure books of history, voyages, novels, and narratives which have touches of the marvelous, of elevated sentiment, and of renowned actions.

Reading is found to exert a happy moral influence upon the prisoners. Those who contract a taste for it during their imprisonment are generally well behaved. Properly directed, reading effects a salutary revolution in the soul and imagination of the prisoner. Hence, the choice of books becomes a matter of great importance. Works which amuse by the interest of the narrative and the charm of the style, and those which have in them an element of instruction, contribute to enlighten

and to inform the prisoner at the same time that they afford to him diversion and consolation. They serve to awaken in him the love of home, and sometimes predispose him to the duties of religion.

§ 5. The German states report as follows:

(1) In Baden only 4 per cent. of the prisoners are unable to read when received. Schools are organized in all the prisons. Male prisoners under thirty-five are required to attend, women till they are thirty; beyond the ages named, those attend who choose. The subjects of instruction are the same as those in good primary schools. With few exceptions, the prisoners make satisfactory progress. Every prison has a good library. The books in it are religious, instructive, and amusing. The prisoners for the most part are fond of reading. Books written expressly for prisoners are in little request. Educated prisoners prefer descriptions of voyages, biographies, and technical books; those less educated prefer tales. Suitable reading exercises a beneficial influence; it instructs and relaxes the prisoners' minds, and thus aids their reformation; it favors discipline by removing the feeling of *ennui* and the tendency to disorder.

(2) In Bavaria 12 per cent. of the prisoners on commitment are illiterate. Schools are established only in houses of correction and the general prisons. Attendance is obligatory till thirty-six; after that, it is optional; but prisoners under thirty-six who are already sufficiently educated are excused, if they desire it.

School instruction comprises reading, writing, arithmetic, geography, and German; choral singing and drawing are also taught—the two latter subjects being optional. Prisoners who attend school for less than four months make no great progress; those who have a longer term make very considerable advance.

The libraries consist principally of treatises of a religious and moral character, of books which are generally useful, of popularly-written works on natural and general history, and of popular editions of German classics.

Almost all prisoners in cells read a great deal and enjoy it, but those undergoing collective imprisonment prefer conversation. Reading exercises a good influence by doing away, in great measure, with the evil consequences arising from idleness, and promotes the prisoner's improvement by the cultivation of his mind. Simple tales and entertaining books are preferred—religious books least of all.

(3) Of one hundred prisoners sentenced to hard labor in Prussia, seventeen cannot read when they enter the prison. In other prisons a less percentage are illiterate. Schools exist in all Prussian prisons except four small houses of arrest.

All prisoners undergoing cellular imprisonment receive instruction. Among the associated prisoners preference is given to the young and to those whose education has been greatly neglected, and whose intellectual faculties give promise of subsequent progress.

The prescribed subjects of instruction are sacred history, reading, writing, arithmetic, singing, and sometimes drawing. The lessons in reading at the same time give instruction in the history and geography of Prussia. The arithmetic is such as is useful in daily life. The prisoners are diligent in learning, and make satisfactory progress.

The prisons have libraries containing religious, instructive, and entertaining books. In 1869 the total number of books in these libraries was 144,418: 42,210 entertaining and instructive, 23,745 educational books; the remainder were religious works.

Most of the prisoners are willing and diligent readers. They all show

a marked preference for histories and works on natural science written in a popular style. Such reading has evidently a very good influence on them.

(4) The prisoners in Saxony are generally sufficiently instructed in the elementary branches, but not many of them have gone much beyond that degree of education. The penitentiary takes especial care to supply the defect of the elementary education by obligatory weekly instruction. The general and special preparation for their calling is supplied to the prisoners by free instruction on Sundays. Such instruction is not obligatory, but the prisoner has a claim to it arising from good behavior. It is voluntarily given by the officers, and not by the clergymen and teachers alone. The library in the penitentiary of Zwickau contains 5,000 volumes of religious, instructive, and entertaining books, thus providing for all the mental wants of the prisoners who, under the careful assistance of the teachers, are diligent readers.

(5) Prisoners unable to read and write on their admission to the prisons of Würtemberg form a rare exception. Out of 1,317 prisoners present June 30, 1871, nine could neither read nor write; eight could read and not write. All the prisons have schools. The prisoners must attend school till thirty years of age; prisoners above that age are allowed to attend. The prison schools are as efficient as good primary schools. The branches of instruction are reading, writing, arithmetic, moral and sacred history, geography, history of the kingdom, and, in some prisons, drawing. Those sentenced to short imprisonments have their former knowledge recalled and fixed more firmly in their minds; those suffering long imprisonment have it extended, and thus get a higher education. Attentive and diligent prisoners are much pleased to take part in the instruction. In all the prisons there are libraries. The books are religious, instructive, or entertaining.

§ 6. Both scholastic and industrial education is regarded by the penitentiary administration in Italy as a principal agent for the reformation of prisoners. To judge of the breadth and efficiency of the former, it will suffice to compare the degree of instruction possessed by those who enter and those who leave the penitentiaries. The illiterate among those entering are: In the bagnios, 92 per cent.; in the penal establishments, 64 per cent.; and in the establishments for minors, 60 per cent. These percentages are reduced for those leaving the prisons to: In the first class named, 73; in the second, 46; and, in the last, 12 for the houses of custody and 3 for the reformatories.

In each penitentiary there exists a school, to which is admitted the largest possible number of prisoners, the youngest and best conducted having the preference. In the houses of detention and the reformatories, the school takes a wide range, as it admits all the inmates indiscriminately, and in these are specially taught drawing, vocal, and instrumental music, agriculture, some foreign language, &c., and this with admirable results. Every prison, whether for juveniles or adults, has a small library belonging to it, the formation of which specially occupies the attention of the central direction. The greater part of the works composing these libraries are books written specially for prisoners, and others selected from educational works, written in a pleasing style and presenting clear and elementary notions of the national history, mechanics, moral tales, &c. As soon as the prisoners acquire the ability to read, they show a great inclination to it; but almost invariably they seek in books some diversion from their monotonous life, or food for the imagination, rather than a fund of solid knowledge; consequently few of the books read by them are of a didactic character, but the greater

part are novels or romances, of course always of an unimpeachable moral tendency.

§ 7. Schools do not exist in all the prisons of Mexico. Wherever they do, they are usually frequented by all illiterate prisoners.

The education imparted consists of the various branches of primary instruction and of religious and moral teaching. The progress made is satisfactory.

There are no libraries in the Mexican prisons. Generally prisoners do not read much, as they belong for the most part to the lower classes of society, where education is seldom imparted. Many are not able to read.

§ 8. Thirty-five to thirty-eight in the hundred will indicate, with sufficient accuracy, the proportion of prisoners in the Netherlands who are unable to read and write at the time of their entrance.

Schools exist in all penal establishments, except in the police and cantonal prisons. In the cellular prisons the instruction is given in the cells. All prisoners, up to the age of forty years, who do not know how to read and write, are obliged to receive that instruction.

The branches commonly taught are reading, writing, and arithmetic. The system of instruction leaves much to be desired. Reforms have been introduced or are in contemplation. In the two central prisons for juvenile prisoners, the system of instruction is all that can be desired.

There are libraries in all the prisons, which include books on morals and religion, histories, travels, &c. The books are specially classified according to the different religions. Most of the prisoners are fond of reading; they generally prefer books of history, travels, and the like. Their reading has a happy effect upon them.

§ 9. Only about one in the hundred of persons committed to prison in Norway is entirely illiterate.

Schools exist in all the penal prisons, but not in the minor prisons of the districts; yet, even in these, some instruction is given to ignorant young prisoners who remain for any considerable time. Instruction is given in religion, reading, and arithmetic; to some extent, also, in writing and music. Generally, the prisoners make good progress. Libraries are found in all the prisons. Those in the district prisons contain chiefly, though not wholly, religious books; those in the penal prison embrace, besides religious works, histories, travels, &c. Naturally the prisoners, especially those confined in the cell-prisons, apply themselves eagerly to reading, and evidently profit by it.

§ 10. In Russia very few of the prisoners, when received, are acquainted with reading and writing. Schools are gradually introducing into all the prisons of any size. Attendance is optional. As regards the kinds and degree of instruction imparted, no details can be given, as penitentiary education is still in its infancy. It is proposed, when fully organized, to make it broad and comprehensive. Mr. Savenke, a distinguished specialist, has already made some remarkable experiments and achieved extraordinary results in this department of prison work.

Libraries, though still but poorly supplied, are found in many prisons. The prisoners are fond of reading and of having books read to them, when there is no compulsion in the case.

§ 11. Nearly all the prisoners committed to the Swedish prisons can read and much the greater part write.

Schools exist in the associate prisons; in the cellular prisons, the inmates are instructed in their cells. All the illiterate are allowed to attend upon the lessons, unless they are too old to profit by them.

Instruction is limited to reading, writing, religion, the elements of history and geography, orthography, the four fundamental rules of arithmetic, and natural history. The progress is about equal to that made in the national schools, and is satisfactory.

There are small libraries in the prisons. The prisoners voluntarily spend their leisure time and their holidays in reading, either individually or in classes. In the latter case one of themselves or an officer reads aloud.

They prefer religious and moral books or accounts of voyages. On Sundays they practise sacred music. These exercises have an excellent effect both on the minds and manners of the prisoners.

§ 12. The degree of illiteracy varies in the different cantons of Switzerland. The official report sent to the congress from this country states the general average, on committal, of wholly illiterate prisoners at 17 per cent., and this, notwithstanding education is obligatory in Switzerland and in fourteen cantons is also gratuitous. These facts, taken together, show how prolific a source of crime ignorance is.

Schools are organized in all the improved penitentiaries, and in many other establishments lessons are given by the chaplain. It even happens that these duties are confided to a prisoner, if he is a teacher by profession, or if he possesses the necessary knowledge and aptitude. In penitentiary establishments in which schools are opened, all the prisoners, except those excused by age—above forty-five—and those subjected to the cellular *régime*, attend lessons in classes. The prisoners receive, on an average, from four to five hours' schooling per week. Those who are in the cellular stage are visited by the instructor in their cells, and there commence their course of instruction. Three classes are formed in the best organized penitentiaries. In the lower class the elementary branches only are taught; in the middle class progress is made toward the higher branches of study; and in the highest class are studied mathematics, physics, technology, and linear drawing, so far as these sciences are applied to arts and trades; and even, in some cases, foreign languages are taught.

The progress made differs much in the case of different prisoners. Many are remarkable for their zeal and power of acquisition, while others advance but slowly. The organ of thought, little accustomed to being used, has lost its force. The power of memory is often wanting, and the result in these cases is a stupefaction, which leads to indifference. Still, the average progress made is highly satisfactory, especially in the case of juvenile delinquents.

Libraries are found in all the prisons. In those of the cantons where prison discipline is little advanced, the number of books is limited, and works exclusively religious predominate. In the penitentiaries which are better organized the libraries are composed of moral and religious books, of works of general history and the history of Switzerland, of biographies, travels, ethnography, natural history, works on mechanics, agriculture, belles-lettres, &c. Romances of a moral character are not excluded.

The prisoners read, relatively, a great deal in the penitentiaries where they pass Sunday in their cells, and where they have at their disposal a variety of works. They generally prefer moral tales, narratives of voyages, biographies, Swiss and general history, and works of popular science. Reading is found to have a very beneficial effect upon the prisoners. It enlarges the circle of their general knowledge, and by fuller explanations of what they had learned in the way of routine, it develops also their practical knowledge. It is by keeping their minds

continually occupied by labor, or by moral and intellectual recreations, that that self-respect is oftenest awakened in prisoners which constitutes the best guarantee against secret vice. These elevating and noble agencies calm an ardent imagination, and often put to flight ideas inspired by base passions and by vicious and criminal sentiments.

§ 13. The general condition of prisoners in the United States, in point of education, is low as compared with the whole population of the country. Yet it differs much in different States. In Massachusetts, for a period of eight years past, the statistics show very nearly one-third of all prisoners to be wholly illiterate; yet in the highest prison, at Charlestown, the proportion of illiterate convicts since the beginning of 1864 has been scarcely more than one in ten. In the Philadelphia prison, (eastern penitentiary,) out of 7,092 prisoners received between 1829 and 1872, about one-fifth (1,418) were wholly illiterate, and almost a sixth more (1,124) could only read. In the western penitentiary of Pennsylvania, at Pittsburgh, the proportion of illiterate convicts is less, (42 in 375, or one-ninth,) while those who can read only is still smaller (47 in 375, or one-eighth.) In the county prisons of Pennsylvania, more than a third of the prisoners are illiterate, and the same is true of New York; but, in the large Western States of Ohio, Illinois, Michigan, and Wisconsin, the proportion of the illiterate is smaller, and probably does not exceed one-fourth. Out of 8,744 convicts received by Mr. Brockway in Michigan, 2,100 were wholly illiterate; but in the Michigan state-prison, only 42 out of 356, or less than one-eighth, were wholly illiterate, though only 286, or three-fourths, could both read and write. In the Iowa state-prison, 34 out of 216 could neither read nor write; in the Kansas state-prison, 61 out of 303; while 42 more could read indifferently, but not write. In California, 226 convicts in the state-prison out of 732 (nearly one-third) were illiterate. But when we look at the late slaveholding States, the proportion of illiteracy greatly increases. Of 669 convicts in Maryland, 394, or nearly three-fifths, could neither read nor write; of 389 in North Carolina, 264, or more than two-thirds, can neither read nor write; in the other fourteen Southern States the proportion is probably about the same. Practically, then, two-thirds of the prisoners in these sixteen States are illiterate, while in the rest of the Union something more than one-third are so, probably; so that about half the 38,000 prisoners now in confinement are practically without education, and a large proportion of the remainder possess it to only a very limited extent. The women in prison are not so well educated as the men, and the short-sentenced convicts, as a rule, not as intelligent as those sent to higher prisons.

The provision made for the mental improvement of prisoners is better now in most of the States than it was a few years ago. Public attention has been drawn to the subject, and, in a few prisons, not only libraries and schools, but lectures have been established, with a view to the general education of the convicts and to aid in their reformation. The best instance of this prison instruction in the United States is probably found in the Detroit House of Correction, where a school-system was established in 1869, when the number of convicts was about 360; on the 1st of May, 1872, it was 402, of whom 296 were men and 106 women. During the year 1871 the average number of convicts in the prison was 385, in school 219, or nearly two-thirds of the whole number. Of this average, 141 were men and 78 women, the schools being separate. In his last report, Mr. Brockway says:

This system was introduced among the prisoners to aid their reformation, and is now conducted for this purpose; not so much to relieve the monotony of imprisonment and to impart the ability to read, write, and cipher, for the convenience of these accom-

plishments, as to discipline the mind and fit it to receive and to evolve in the life the thoughts and principles that constitute their possessors good citizens. Attendance upon the school is made obligatory, and the intellectual tasks are required, as are the industrial. The sessions of the general school are two and one half hours each, on two evenings every week, and are for recitations chiefly. The writing-school is also held on two evenings each week for both men and women, and the men's writing-class is followed each evening with a normal or teachers' class, in preparation for the general school. The women associate a singing-exercise with their writing-class on each evening. All prisoners who attend school are supplied with a light in their cell, for study, and all draw books from the library. Every Saturday, at 5 o'clock, all the prisoners in the institution (numbering now 440) assemble in the chapel to listen to a lecture. This is the crowning feature of our educational effort; during 1871 we had forty-six lectures—carefully-prepared, well-delivered lectures—many of which had been delivered to first-class audiences of citizens, and were worthy of a place in any lyceum-course.

The following details, given by the teachers, are too important, as well as too interesting, to be omitted:

The twenty-one classes into which the school has been divided have been taught by twenty-eight teachers, selected with a single exception from the prisoners themselves. The changes in teachers have been much less numerous than was the case in previous years. It has been noticed that men sentenced for considerable periods make the best teachers, not simply from the fact that they take a greater interest in what must occupy them for some time, but because they have more force of character, more decisiveness. Some of the worst men, morally, have made the best teachers. From the monthly record of progress which has been kept, it appears that the work done by each of the prison classes in arithmetic, which has been the subject in reference to which chiefly the school has been graded, has averaged as much as that which is usually done by three classes of corresponding rank in our public schools. In other words, a year and a half school-work in arithmetic has been done during the last forty-five evening sessions.

The song of opening, the brief talk upon some scientific theme, the lessons of the evening, have been listened to with attention and entered upon with avidity. There is evidence on every hand that the school has furnished the themes on which much thought has been bestowed in the work-shop and in the cell. The pleasure in the business of the school-room, the evident delight of the men in the work assigned them, the progress they have made in manners and in studies, have been much greater than I at all anticipated. I think no one before the trial would have said that men long unused to study, or who had never known it, working all day in the shops, with two evenings' instruction per week by their fellow-prisoners a little in advance of themselves, would in main studies make two or three times the progress which the pupils in our public schools make under the most favorable circumstances; and yet such has been our constant experience. Three years ago the women's school had but one teacher. There were none among the prisoners competent to assist in the work of teaching. There are at this date seven regular assistants teaching quite successfully. They have been educated for it in the school; and while they are teaching others they receive also practical instruction, not only in the lessons which they are studying, but in methods of teaching. The school is now very well graded and classified. Nightly records are made of each individual in school, and a system of monthly examinations and reports is in operation, which not only tests the progress of the pupils, but measures the success of the teachers also. Hence the new school-year of 1872 opens very auspiciously.

This testimony is the more reliable, especially in what relates to the comparative progress made by the prison-students and by the pupils in the public schools, inasmuch as Mr. Tarbell, the principal of the male prison-school, is also principal of one of the most important of the public schools of Detroit, and hence speaks with thorough knowledge of both classes of schools and scholars.

Mr. Brockway makes this frank confession and gives this sound advice:

In view of the benefits of the school it seems incredible that I could have spent more than twenty years in the management of prisoners, and never, until 1868, have introduced this measure. Let me urge all who can do it thoroughly to put this feature into their management, as indispensable to satisfactory reformatory results, working and waiting for such changes in the law as shall enable us to carry the education of every prisoner we receive to a point promotive of his pecuniary prosperity, his conscious self-respect, and his probity of deportment.

General Pilsbury, of the Albany penitentiary, the teacher of Mr. Brockway in general prison management and discipline, is, as regards penitentiary education, nobly following the example of his distinguished pupil. He has fitted up a large and commodious school-room, giving a desk to each convict-scholar, and other accommodations equal to those afforded in the best public schools of our large cities. The work of instruction is vigorously prosecuted and is yielding satisfactory results.

Prison-schools are organized or instruction is given at the cell-door in many of our state-prisons; but it is far from being as thoroughly organized or as effective as at the Detroit House of Correction. Of the 16,000 prisoners in the state-prisons of the Union at the present moment, from 4,000 to 6,000 may be receiving scanty instruction in schools of some sort. Of the estimated 22,000 prisoners in common jails and houses of correction it is safe to say that not more than 3,000 are receiving any scholastic instruction whatever. We have already seen that about 20,000 of the 38,000 prisoners in the whole country are practically illiterate, and certainly less than 8,000 of these are under instruction in the prisons. Such a condition of things calls loudly for reform, and it is, therefore, a cheering circumstance to be able to add that the number of prison-schools is constantly increasing, and that their character improves day by day.

The condition of penal institutions in the United States is much better in respect of libraries than of schools. Most of the state-prisons and houses of correction have libraries, some of them large and excellent. Probably the aggregate number of volumes in these two classes of prisons is 25,000. With the exception of the States in which slavery prevailed till within a recent period, of prisoners confined in the state-prisons from eight to nine-tenths are able to read sufficiently well to be entertained and profited by it. The taste for reading, thanks to the good libraries in our prisons, has become quite general with the prisoners; and there is a singular unanimity among the officers of prisons as to the high advantage they derive from the indulgence of this taste. With one voice they bear testimony to the value of the libraries in communicating useful knowledge to the prisoners, in elevating their minds, in beguiling many an otherwise tedious hour, in making them cheerful and contented, in affording material for profitable reflection, in supplying good topics for conversation with them, in improving the discipline, and in constituting one of the most effective of reformatory agencies.

§ 14. The department of education in the English convict-prisons, including the care of the library and the distribution of books among the prisoners, belongs to the chaplain. Books are supplied to the prisoners, both of a purely religious and of a more general character; and those who are uneducated are taught by a staff of schoolmasters at least the elements of reading and writing; those who have already some knowledge have opportunities and encouragement in improving themselves. As a knowledge of reading and writing affords so much opportunity for mental and moral improvement, and may have so important an effect on a prisoner's well-being in after-life, great inducements are offered to prisoners to exert themselves to attain it, by rendering some of the subsequent privileges they may gain conditional on their being able to read and write. For example, no convict can be promoted to the first class unless he can read and write; and, after he has been under instruction a sufficient time, he is obliged, if he wishes to enjoy the privilege of communicating by letter with his friends, to do it himself, and without assistance. Of course, exceptions to this rule are made, in the case of men who, from age or mental incapacity, cannot be expected to

acquire even the elements of knowledge. Half-yearly examinations are held to ascertain the progress made by each prisoner, and the result is, in the main, satisfactory. Of 775 prisoners discharged from the prisons at Chatham, Portland, and Portsmouth, the 158 who could neither read nor write when convicted had learned to do both while in prison; and most of the remainder had made advances in the knowledge which they had previously possessed.

Of 157,223 committed to the county and borough prisons of England in 1870, 34 per cent. could neither read nor write, and 62 per cent. could do one or both imperfectly, leaving only a residue of 4 per cent. who had mastered these important arts. Most or all of these prisons have schools and libraries. But the report submitted by the inspectors to the congress affords no information on these points beyond this naked statement.

§ 15. Of prisoners committed to the Irish convict-prisons, 22 per cent. of males and 63 per cent. of females are wholly illiterate.

Libraries exist in all the convict-prisons, but they do not appear to be very well provided with books, beyond those of a religious character, which are chiefly Bibles, prayer-books, and catechisms of the Episcopal and Roman Catholic churches. Schools are organized in all the prisons, and the work done in them is highly commended by the inspector of public schools.

CHAPTER VI.

PRISON LABOR.

§ 1. Penal labor, as such, does not exist in the prisons of Austria, although difficult and disagreeable work is sometimes awarded by way of disciplinary punishment. A considerable variety of trades is pursued in the Austrian prisons. No less than twenty are named, and the statement ends with an *et cetera*. Besides handicrafts pursued within the prison-walls, trustworthy prisoners who so desire are employed in open-air work, as farmers, gardeners, masons, bricklayers, laborers on streets and railways, stone-breakers, &c. Latterly prisoners sentenced by the higher courts are much employed in out-door work. The effect of this is found beneficial in two ways: 1, the prisoners so occupied, the greater part of whom are serving out their first sentences, are thus saved from the evil effects of association with other prisoners; and, 2, their health is better, and hence their power of production while at work is greater.

The system of hiring the labor of the prisoners to contractors is preferred in Austria, provided, always, that contractors of a suitable character can be found; otherwise, the prison-direction manages the labor on behalf of the state. The contract-system is preferred for two reasons: first, because it prevents loss and damage; and, secondly, because it enables the officers to devote themselves entirely to what is deemed their proper duty, the care of the prisoners. There is, nevertheless, confessed to be a grave disadvantage connected with this system in the fact that an outside element is thus introduced among the prisoners unfavorable to their moral improvement. Still, it is believed that this disadvantage may be reduced to a minimum by a careful selection of contractors, foremen, and workmen. The average proportion of prisoners for the last three years who were ignorant of a trade at the time of committal was, in the higher prisons, men, 8 per cent.; women, 24 per cent.; in regard

to the other prisons, statistics are wanting. Every such prisoner learns a trade in prison, if he is sentenced for a sufficiently long time. Pains are taken to guide the prisoner in judging of his own capability, that so he may learn to value it, and be thereby induced to earn an honest living. Thus he is taught, not only how to work, but how to estimate the worth of an upright life; and he is quickened in his industry by receiving a portion of what he earns during his incarceration.

§ 3. No distinction is made in the prisons of Denmark between penal and industrial labor. The contract-system is in use here. It is regarded as the best, both economically and with regard to reformatory effect. However, it is hedged about with the greatest care, and all intermeddling by contractors with the treatment of the prisoners is completely cut off. Labor is regarded not merely as a source of revenue, but rather as an essential condition of the due execution of the sentence, and as a necessary agent in the moral regeneration of the prisoner. The profit derived from it does not meet the current expenses of the prisons, since these, including the administration, amount to \$70 a year *per capita*, while the profit of the prison labor is only about \$40.

§ 2. Penal labor, as distinguished from industrial, does not exist in the prisons of Belgium. The report enumerates thirty industrial occupations as those in which the prisoners are engaged. The employments introduced into the prisons are chosen, preferably, from among those most likely to afford the prisoners, after liberation, the means of an honest livelihood. It is held in Belgium that labor ought not to be imposed as a punishment, since the first necessity of man is labor, and the first sentiment to be developed in him is the love of labor. The liberated prisoner ought not to carry with him, on his discharge, the idea that work is a punishment in this world, and that he has suffered it long enough during his imprisonment to hasten, at the hour of his deliverance, to free himself from its chains. Labor should be exhibited to him in the prison (as it is in society) as the source of the physical and moral elevation of man. He ought, in all things, so to identify the life of man with the necessity and the attraction of labor that even in captivity it should be still, if not the image of happiness, at least a solace attached to its exercise and an idea of punishment from its privation. In a word, if labor ought to enter as a penal element into penitentiary imprisonment, it is not in the use but the privation of it. Undoubtedly, labor in penitentiary imprisonment ought to be obligatory; but it ought not to be imposed on the prisoner under the empire of constraint, but as an obligation to which his reason, his interest, his necessities, everything, ought to urge him. Penal labor is, therefore, repudiated in Belgium as inconsistent, in its very nature, with the fundamental idea of a true prison discipline.

Two systems of labor are found in the Belgian prisons, namely, that of letting the labor to contractors and that of working it by the state. Each of these systems is thought to have its special advantages and disadvantages. The former, it is claimed, yields the largest revenues and offers facilities for diversifying the labor of the prisoners and affording them occupations suited to their special aptitudes, while the latter offers certain advantages, (though it is not stated what they are,) when it is a question of labor of easy execution or of the creation of products for the use of the administration itself. Care is taken to state in the report sent in by Belgium that the contractors are placed under the immediate supervision of the directors, a statement which is tantamount to an admission that the system is extremely open to abuse, and needs to be guarded and watched with the greatest circumspection.

Only one system of letting the labor prevails—that of awarding it to contractors who offer remunerative prices and adequate guarantees of solvency and morality. All the prison-keepers are required to be artisans, and they are charged, not only with the supervision of the prisoners belonging to their several sections, but also with instructing the prisoners in the trades which they are learning. From 60 to 70 per cent. of the prisoners have no regular business or assured means of support when committed. It is looked upon as a point of the greatest importance to impart to them, during their imprisonment, the art of self-help by teaching them some regular business and training them to the love of work; the more so, as it is believed that ignorance of a business and aversion to labor are among the chief causes which impel men to the commission of crimes against property. Hence special effort is made to give to the prisoner a clear perception and strong realization of the necessity of mastering a business while undergoing his punishment, so that, after his release, he may be able to work for his food, his bed, his clothing—in a word, to assure the satisfaction of his essential wants.

§ 4. In the prisons of France there is no penal labor, as that expression is commonly understood. The penal system is no longer founded, as formerly, on suffering and terror. Corporal punishments have disappeared from it. What is desired at present is to punish the criminal; what is sought as the end of that punishment is his reformation. Therefore, industrial labor alone is found in the prisons, obligatory in the case of those under sentence, permitted in the case of the arrested and the accused. It is thereby sought to prevent the dangers of idleness and to form the taste and the habit of labor. In the smaller prisons there is difficulty in organizing the labor. In the central prisons the labor is thoroughly organized; if any are without occupation, it is the exception, and not the rule. Large industrial workshops in these establishments continually present a scene of busy toil. Different industries, to the number of fifty or sixty, have been introduced into the male central prisons. The principal are shoe-making, the manufacture of hosiery, weaving, button-making, cabinet-work, lock-smithing, the manufacture of hardware, tanning, &c. There are, besides, three establishments in Corsica and one in Belle Isle, in which the prisoners are engaged in agricultural labors. Sewing, which can be applied to very different kinds of work, is almost the only industry pursued in the female central prisons. Piece-work is the general rule. With a view to avoid the competition of prison labor with free labor, the rates of payment for the work done have to be studied and regulated by the administration, which carefully considers before-hand the different interests involved. The rates must be the same as those paid to free industry for the same kinds of labor.

The contract system of labor prevails in most of the prisons of France, and is the one to which the administration gives its preference.

Of the men committed to the central prisons, 5 per cent. had no regular calling or business prior to commitment; of the women, 12 per cent. Evidently this cannot mean that so large a proportion had learned trades and become artisans. The administration exerts itself, as far as possible, to cause to be taught to the prisoners previously without a regular business some calling which will enable them after liberation to gain an honest living.

§ 5. Germany reports: There is no merely penal labor in the prisons of any of the German states.

(1.) In the Grand Duchy of Baden, the labor of the prisoners is not let

to contractors, but is managed by the administration itself. This system is preferred because it enables the authorities to observe the state of each prisoner and to exclude all outside elements prejudicial to discipline and reformation. It is sought to introduce variety of trades, so that too many may not be employed on any one to the injury of private industry. An extensive market and the highest prices are sought.

Forty per cent. of the prisoners are ignorant of a trade on entry. To impart to these a trade and the power of self help, if they have the requisite ability and stay long enough in prison, is the principal work. This result is arrived at by improving the prisoner's morals, by scholastic and industrial instruction, and by the whole prison treatment.

(2) The several industries in the Bavarian prisons are conducted by their respective administrations. When prison-labor is given to contractors, another authority is placed between the administration and the prisoner, which cares only for making the greatest profit out of the prisoner's work. Not only is discipline thereby interfered with, but the character of the punishment is changed and its purpose is placed in jeopardy. From the disciplinary and penitentiary point of view, the giving of prison labor to contractors is condemned in Bavaria, even though the profit derived therefrom may be greater than if the administration carried it on.

The proportion of prisoners who, on entering prison, are ignorant of a trade is 29 per cent. It is made a special object to impart a trade—and so to teach the art of self-help—to all prisoners who have the necessary capabilities and whose terms of sentence are long enough to permit it.

(3) In the prisons of Prussia more than fifty different trades are carried on by the men and ten by the women; a portion of the male prisoners are also occupied in farm-work.

The plan commonly adopted in the prisons of utilizing the labor of the convicts is that of letting it to contractors; what work shall be given to contractors is settled by the administration. It has absolute control in the selection of prisoners for the performance of the work and over its execution. It is deemed important to have such a number and variety of trades that, in allotting prisoners their work, due regard may be had to their trades before admission and also to their capacity. Each particular branch of industrial labor is, by the regulations, given to one contractor; the system of "general contracts" has no existence in Prussia. The contracts are so made as to exclude all direct relation between the prisoner and the contractor. It is conceded that the state loses financially by this system, but is claimed that it simplifies the administration.

About 5 per cent. of the inmates have knowledge of some trade on entry. As it is considered highly important for a prisoner during his imprisonment to learn how to help himself on his liberation, it is made a special object to teach him a trade, if he had not learned one before. In addition to school-instruction and apprenticeship to a trade, he is bound, in order to learn the art of self-help, to keep himself strictly clean, take due care of his clothes, see to the cleanliness of his cell and all utensils, and to the proper order of his bed.

(4) Saxony, one of the most industrial countries, produces in her prisons almost all the different articles of industry and trade. The work is partly given to contractors, who are entirely dependent on the administration of the penitentiary, and is partly managed by the latter itself on its own account. The system of giving the work to contractors, who are in entire dependence on the administration, has the preference, because, as it is thought, the officers cannot be at the same time good

tradesmen and good officers, and because the interests of the two would be opposed and conflicting. The profits of the prisoners' work cover from about one-third to one-half of all the prison expenses.

(5) Besides the necessary work done for the prison itself, there are carried on in the prisons of Würtemberg some fifteen to twenty different trades by the men, and eight or ten by the women. Both industrial systems find place—that of letting the labor to contractors and that of directing it by the administration. The opinion is held that preference should be given to the one or the other, according to the nature of the work.

More than half the prisoners, when received, have a knowledge of some trade. As far as possible, the prisoner is put at the same trade in prison at which he worked before, or he is taught some other, selected by himself, of those carried on in the prison. The same is true of those who had not learned a trade before their imprisonment.

§ 6. In the penitentiary system of Italy there is no labor bearing an exclusively penal character. It is sought to give to the industrial education of the prisoners the turn which seems best suited to them, and to impart the trade most easily mastered. Labor has no other aim in the Italian prisons than to overcome the natural propensity to idleness in the criminal, to accustom him to a life of activity and hardship, and to give him the means of obtaining an honorable livelihood.

The industrial arts mostly practised in the penitentiaries are those of the shoemaker, carpenter, blacksmith, and weaver, and in the bagnios the prisoners are made agriculturists, laborers in the salt-deposits, and workers in cotton, hemp, &c. Until 1868, the industries of the prisons were managed by the administration. Since that time, as an experiment, the contract-system has been introduced into eleven prisons. The question, Which is the best of these two systems? is so complicated and difficult that the administration is unwilling to pronounce an opinion till it has made further trial of each.

§ 7. Penal labor does not exist in Mexico. The sentiment of the commissioners who prepared the report for the congress is opposed to such labor, first, because it does not contribute to the moral improvement of the prisoners; and, secondly, because, to render it effectual, it would be necessary to use actual violence, which always humiliates and degrades those who suffer it.

The contract-system is not found in the prisons of Mexico.

It is considered very important that during their confinement prisoners should learn some trade that may enable them to earn their livelihood, as the chief reason why they relapse into crime is that, after they have served their time, they do not find any work; and the want of this reduces them to misery and leads them to commit fresh offenses.

§ 8. In the penitentiary establishments of the Netherlands unproductive or merely penal labor is unknown. Industrial labor, the only kind in use, is everywhere directed by the administration. But both systems of labor, the contract-system and the system by which the labor is utilized on account of the state, have place.

Taking the whole country together, it is believed that about one in four will correctly represent the proportion of prisoners without a trade at the time of commitment. It is regarded as a matter of the highest importance to impart to prisoners during their incarceration the power of self-help, and this result is diligently sought by teaching them, to the utmost extent possible, some useful calling.

§ 9. Industrial labor alone is pursued in the prisons of Norway, and it is managed exclusively by the administration. Many prisoners learn

a trade while in prison. Effort is made to train them to habits of industry, and it is constantly set before them that, of all the causes of crime, idleness is one of the most prolific.

§ 10. In Russia, a marked difference between different kinds of labor is beginning to show itself. Industrial work, which scarcely existed in times past, is now making great progress, owing to the advantages it offers to the prisoner, who sees that he can thereby best escape relapse. Penal labor alone cannot, it is held in Russia, have a beneficial influence. This is clearly proved in Siberia, where the number of escapes is counted by thousands. An intense hatred of the authorities and a strong desire of vengeance are the result when penal is not accompanied by industrial labor, which latter is the sole means of reformation. Industrial labor has produced good results in Russia only when let to contractors. It is now a question whether penal labor shall not be let in the same way. It is held that the administration should not interfere with its direct duties by the care of commercial undertakings.

A thoroughly organized bureau of statistics has but just been established by the ministry of justice. It is therefore impossible at present to give the exact proportion of prisoners who are without a trade when committed; but it is certainly more than one-half. To impart the knowledge of a trade to prisoner ignorant of such knowledge is a special point in the reforms now projected. To give him the power of self-help is regarded as of the very highest importance, since penitentiary science, in its whole scope and essence, is but a struggle against the tendency to relapse.

§ 11. There is no penal labor in the prisons of Sweden as contradistinguished from that which is industrial. In the associate prisons for men, most of the prisoners are occupied in cutting granite for buildings, for pavements, &c. In one prison a part of the inmates are engaged in cutting up pine-wood for matches, another part in making fine joiners' work. In still other prisons, linen and woollen cloths and blankets are manufactured, as well as all the garments and bedding for the prisoners and a part of the clothing for the army. The women are engaged in making textile fabrics, in all sorts of sewing and binding, in glove-making, &c. In the cellular prisons various kinds of labor are performed by the men, such as tailoring, shoe-making, joiners' work, &c.; and by the women, weaving, sewing, knitting stockings, &c. Recently the manufacture of match-boxes has been their principal employment. Industrial labor has the effect to give the prisoners habits of order and diligence, and to render the violent more tractable.

All the industrial labor in the associated prisons is let to contractors, except what is done for the prisons themselves. Nevertheless, the opinion is held that, to secure the best results in respect of moral reformation, all the industries should be under the direction and control of the prison administration itself, and not that of contractors.

In Sweden the inhabitants of the towns form only 12 per cent. of the total population. In the country men are chiefly farm-laborers or miners. The consequence is that only a small proportion of prisoners had learned a trade prior to their committal—not more, indeed, than 10 per cent. To put the prisoner in possession of a trade, by which he may earn an honest living after his release, special trade-masters, during recent years, have been employed to give the necessary instructions in the cellular prisons. Further measures in this direction will be adopted at an early day. It is in contemplation to grant the greater part of his earnings to every prisoner who, while in prison, has learned

and worked at a trade capable of supporting him. It is believed that this plan will be effective in the reformation of numbers of criminals.

§ 12. The distinction between penal and industrial labor is made in the Swiss prisons by law only in the cantons where there still exists the system of the old hard-labor prisons, in which a certain class of prisoners are subjected to public labor, viz, in sweeping the streets, making roads, diking rivers, &c. This distinction is not made in the prisons in which the reformation of the prisoner is proposed as the end. From twenty to thirty of the more common and more useful trades are taught in the Swiss prisons.

Industrial labor in the prisons of Switzerland is managed by the administration itself. The attempts which have been made in some prisons to let the labor to contractors for a fixed daily sum have been very speedily abandoned. Orders are received in the penitentiaries. The raw material is furnished by the administration or by those who order the work; the tools belong to the establishment. The keepers, who act at the same time as foremen, superintend the work and calculate the value of the workmanship and of the raw material employed. Account is taken in this calculation of the prices-current. Everywhere they endeavor to deliver merchandise carefully manufactured; and thus, as a general thing, the industrial products of prisons are in good repute. Preference is given in the modern penitentiaries to the management of the administration over that of contractors in the interest of penitentiary training. The administration, being supreme, can introduce a greater variety of industries, and suit to these latter the different aptitudes presented by the prisoners. The consequence of the distribution of the prisoners on a larger number of industries is that each branch is restricted to a relatively small number of workmen, and hence free labor has no occasion to fear an injurious competition. The endeavor is made to create a demand for the products of prison labor rather by the excellence and solidity of the manufacture than by the cheapness of the price. Were it otherwise, the penitentiaries, which ought to be at the same time industrial schools, would be turned aside from their proper end. In Switzerland it is found that penitentiary training is incompatible with the system of letting the labor of the prisoners to contractors. It is the administration alone that can feel an interest in teaching a trade to every prisoner during his stay in prison, so that at the time of his liberation he may be independent and able to gain an honest living.

The number of prisoners not having a regular business at the time of their commitment is relatively considerable. Nevertheless, the tendency is shown to be toward a diminution, if comparison is made between the results of statistics for the last twenty years in the penitentiary of St. Gall. This belongs evidently to the progress of civilization.

Of criminals committed to the Swiss prisons, about 50 per cent. make no claim to have learned a trade; and, of the 50 per cent. who do so claim, there is scarcely a fourth part who can produce a respectable piece of workmanship. These facts clearly show that the want of a trade is not without its influence in the law which controls the causes of crime. Hence it is sought in all the penitentiaries—particularly in those more recently built and organized upon a rational plan—to give a trade to the prisoners, and above all to juvenile delinquents, who have to undergo an imprisonment of one or several years. In all the penitentiaries it has been remarked that numbers of the prisoners acquire in a short time the ability to do that which free workmen would be able to execute only after a long apprenticeship. Apprenticeship to a trade which requires a certain degree of intelligence, and is, at the same time,

to the taste of the prisoner, is one of the principal agencies in reforming him. Without industrial labor of this kind, no satisfactory result can be expected from a penitentiary system, and relapses will be inevitable. A trade learned in the establishment is held to be worth more, as regards the support and succor of the prisoners, than a patronage society. It is well understood in the cantons somewhat advanced in penitentiary science that it is important, in order to prevent relapses, not only to make the prisoner an able workman, but also to teach him during his incarceration to help himself. In this view, there have been introduced in most of the prison regulations arrangements by which zeal and diligence in labor and the habit of saving are stimulated. The scale of the *peculium* rises in many of the establishments with the augmentation of labor. In the better organized penitentiaries the further effort is made to attain this result by a careful apprenticeship to the trade chosen by the prisoner, by making him acquainted with the nature of raw materials, the places from which they are obtained, and their market value; also, with the tools and machines employed, the price-current of the articles manufactured, and the manner of calculating the value of the workmanship. The prisoners are more or less associated with the administration through their industrial labors. If by their good conduct and their aptitudes they come at length to deserve the necessary degree of confidence, they are called to fulfill the functions of foremen. There is thus afforded to every prisoner the opportunity of developing and manifesting his power of initiative. Technical works and journals are placed in the hands of the workmen on different branches of industry. Writings of the character of Franklin's Poor Richard afford material assistance in this system of penitentiary education.

§ 13. All the labor done in American prisons from which revenue is derived is of the kind known as industrial, in contradistinction from penal, which does not exist among us. But there is scarcely any kind of industrial labor which does not find a place in the prisons of the United States. In Alabama and Texas the convicts build railroads, in Mississippi they raise cotton, in Tennessee and New York they work mines; in many of the States they cultivate gardens or do farm-work. But the prison employments are generally mechanical, and especially deal with work in wood, leather, and the metals, though stone-work is also done on a large scale where prisons are building. This was formerly so common an occupation for American convicts that "hammering stone" became a common term for imprisonment. Quarrying stone for sale or for making quicklime is much practised in the great prisons of Joliet (Illinois,) and Sing-Sing (New York,) the largest in the country. At the Auburn prison, agricultural tools are extensively manufactured; in the Ohio state-prison many convicts are employed as saddlers, wheelwrights, and blacksmiths; in the cellular prison at Philadelphia, (the eastern penitentiary,) the employments, being pursued in the cells, are mainly sedentary, such as shoemaking, weaving, and the lighter kinds of wood-work; in Massachusetts ornamental iron-work, brushmaking, shoemaking, and sewing by means of the sewing-machine are common prison employments. In the Maine state-prison, the warden, being a carriage-maker, has introduced that branch of industry; in the prison of Northern New York, at Dannemora, a great iron mine furnishes ore, which is smelted, forged, and wrought into nails by the convicts; in the Michigan state-prison, at one time, tanning leather was largely practised; in the Detroit House of Correction chair-making has been the

chief industry. In fact, there is scarcely any mechanical occupation that has not been carried on in some one or more of our prisons.

In general, the labor of the convicts is hired by contractors at a fixed sum per day, and this varies from a few cents to something above a dollar a day, the highest contract wages being paid at the Massachusetts prison. In a few of the prisons, perhaps a tenth part of the whole number, the whole prison labor is managed by the prison administration, and in nearly all some part of the labor is so managed, especially where the building or enlarging of the prison is going on. It requires great skill and business capacity in the head of a prison to manage its industries, and for this reason such management is extremely liable to failure. On the other hand, the contract system often introduces moral and financial corruption, injures discipline, and demoralizes the convicts.

A few years ago the expenses of nearly all our state-prisons exceeded their earnings; but a change has been going on in this respect, and there is now fully a fourth part of them that earn more than they expend. Every one of the six New England States reports a profit from its state-prison, ranging from \$20,000 a year in Massachusetts to \$1,200 in Connecticut; and the excess of earnings over expenses in the six prisons (containing an average of some 1,100 convicts) was last year above \$39,000. With a smaller number of convicts than this, Ohio shows an excess of earnings amounting to more than \$40,000. Under skillful and honest management, all our state-prison convicts might perhaps earn their own support and \$30 a year besides; but two-thirds of them, and perhaps three-fourths, fall far short of this. In the eastern penitentiary, of Philadelphia, with about 600 convicts, the annual deficit, including officers' salaries, is nearly \$60,000, or \$100 for each convict; in the three great prisons of New York it averages more than \$50 for each convict; in Maryland it is about \$30 for each convict, and so on. In the county and district prisons very few of the convicts support themselves by their labor, but the Boston House of Correction, the Rochester Penitentiary, the Albany Penitentiary and the Detroit House of Correction are self-sustaining, and the two last-named prisons earn each a considerable surplus every year. The net cost of supporting all the prisons above their earnings must be nearly \$3,000,000 a year for the whole country, since there are 38,000 prisoners, and the average annual cost of each one above his earnings cannot well be less than \$80.

§ 14. Penal labor, except so far as oakum-picking may belong to that category, is not used in the convict-prisons of England. It has for many years been an established principle in English convict-prisons to endeavor to instil into the convicts habits of industry, to develop their intelligence by employing them on industrial labor, and to facilitate their entering the ranks of honest industry on their discharge, by giving them facilities for acquiring a knowledge of trades. These objects are fortunately conducive to another very desirable result, viz., that of making the prisons self-supporting in various degrees; some of them doing an amount of labor the value of which more than covers the cost of their maintenance.

The gross cost for maintaining the convict establishments in England during the financial year 1871 was £313,633, and in the same period the earnings of the convicts amounted to £228,244, or £22 19s. 4½d. per head on the average number. The net cost of the prisons, after deducting the value of the prisoners' labor, amounts only to £85,389, or £8 10s. per head.

The contract system is not in existence in the English convict-prisons, the industries being managed wholly by the administration.

In the county and borough prisons, great prominence, as a rule, is given to penal labor, such as the tread-mill, crank, shot-drill, oakum-picking, stone-breaking, &c. In a few, industrial labor is well organized, and its products go far towards defraying the ordinary expenses of the establishments; but in general the earnings of prison labor are exceedingly moderate.

§ 15. The labor-system in the Irish convict prisons is substantially the same as that in the English prisons of the same class, except that at the intermediate prison at Lusk, to which there is nothing corresponding in the English convict system, the men are mostly engaged in farm-work.

CHAPTER VII.

SANITARY CONDITION OF PRISONS.

§ 1. The system of drainage in the Austrian prisons leaves little to be desired. The water-supply is reported as always sufficient in quantity, and for the most part good in quality. In the southern provinces, during the hot season, as the water in many prisons is supplied from cisterns, it is not as good as might be wished. In such prisons a modicum of vinegar is supplied to the prisoners, to be mixed with the water. Most of the prisons are well ventilated. The cells are thoroughly cleansed and painted every year. The corridors are cleaned daily and the floors scrubbed with sand and water at least once a month. The cleansing and disinfecting of water-closets take place every day. Personal cleanliness is rigorously exacted. The body linen is changed weekly and the bed linen monthly. The prisoners must take at least four baths a year. The collective prisons are furnished with portable water-closets; the cellular have in each cell a fixed closet, which stands under a ventilator reaching to the roof. The dormitories and cells are lighted by gas or oil, mostly the latter. The heating of the prisons is done partly by iron stoves, partly by hot air, with necessary precautions for keeping a sufficient quantity of moisture in the atmosphere. The bedsteads are generally of wood; in some cases, however, of iron. The bed is of straw, with pillow of the same or of African forest hair; two sheets, and one or two blankets, according to the season. The bed for the sick is the same, but the linen is finer, and it has a cotton coverlet. Nine hours are given to sleep. The remaining fifteen are divided thus: Religious services, one and one-half hours; meals, exercise, and rest, two and one-half hours; labor, ten and one-half to eleven hours; attendance at school, (which is taken out of the hours for labor for those who frequent the lessons,) two hours. Sick prisoners are placed in the infirmary or hospital, and cared for according to the doctor's orders by nurses taken from among the prisoners who show themselves worthy of such confidence; but those prisoners who have only slight ailments are treated in their rooms or cells. Insane prisoners are taken to the public lunatic asylum. The diseases most frequent are those of the respiratory and digestive organs and of the skin and cellular textures. The average number of sick during the years 1870 and 1871 did not vary much from 6 per cent. The death-rate in prisons for sentences exceeding a year was $3\frac{1}{2}$ per cent., while in prisons to which the sentences were for less than a year, it scarcely exceeded one-half of one per cent.

§ 2. The sanitary state of the Belgian prisons is reported good. The

drains for waste-water and night-soil are cleansed every week by a strong current of water rushing through them, so that no emanations dangerous to health can ever issue therefrom. Water is furnished in amplest supply and of good quality.

The ventilation and heating of the cells are effected in the following manner: The apparatus for heating is placed in the cellar. The fire is made in the center of a double cylinder filled with water, which forms the boilers for its propulsion. From the upper part of each of these boilers two perpendicular pipes ascend into the principal ventilating conduits, and conduct the hot water directly into a special reservoir placed in the draught-chimney, appropriated to each apparatus. This reservoir is fed by six pipes, which traverse horizontally each range of cells, returning afterward, by the same passage, to the principal apparatus. Two pipes, filled with hot water, thus pass into all the cells. They are placed in a horizontal conduit running along the floor, close to the exterior wall. These conduits, covered with a plate of perforated iron, form for each cell a little reservoir of heat. Thus the caloric is utilized just where its action is required, since it is precisely in the cells that it disengages itself, supplying each with an equal quantity. Its center of radiation is in the cell itself. Let us examine now the mode of introducing fresh air. This introduction is twofold. In the first place, there is inserted in the window a ventilator of 30 centimeters (about 12 inches) in height and 44 centimeters (equal to 17½ inches) in breadth, through which the fresh air is introduced directly into the cell, without having come in contact with the heat-pipes. Secondly, at one of the extremities of the iron plate which covers the conduits from the hot-air furnace is left an opening, which allows the heat to circulate in the cells. The opposite side of the plate corresponds to an opening made in the thickness of the exterior wall, by which the pure air from outside penetrates into the reservoir, and so into the cells. A valve is fitted to this last opening, by which the prisoner can regulate the introduction of air, and by the same means can increase or diminish the heat of the cell. Let it be carefully noted that the reservoir of which we have just spoken, as well as the introduction of fresh air, is on a level with the floor. The vitiated air is drawn off by a conduit placed in the thickness of the wall on the opposite side from that on which air and heat enter. This conduit, at its upper extremity, leads into a great pipe, which runs horizontally under the roof, discharging its contents into a vertical chimney, at the bottom of which is situated the reservoir which receives the hot water of the furnace, whose smoke-pipe also traverses the chimney. This system of ventilation works naturally and without mechanism of any kind. An active ventilation incessantly purifies the different parts of the penitentiary establishment, throughout which there is always diffused a fresh and agreeable atmosphere. A cleanliness the most minute is continually maintained. The daily cleaning of the premises, the varnishing of the pavement of the cells by means of a special process, and the waxing of the floors and the pavements of the galleries have made it possible to give up washing with water, which is attended with great inconvenience. The walls of the cells, galleries, &c., are washed of a stone-color at the beginning of every year, and partially whenever it becomes necessary to remove spots or stains. No deposit of dirt or dung is allowed within the inclosure of the establishment, and all necessary measures are taken to have the rain-water speedily carried off from the premises. In summer, fumigations are made every morning. They are less necessary in winter, and are, consequently, less frequent during that season of the year.

To insure personal cleanliness on the part of the prisoners the hair is required to be kept short; whiskers, mustache, &c., are forbidden. The men are shaved twice each week. The prisoners are required to wash their feet once a week. Every two months in winter, and once a month in summer, they are required to take a full bath. The body linen is changed every week.

As regards the arrangement of the water-closets, two good systems are in use—movable vessels and fixed seats, with a pressure of water. The cells are lighted with gas; two stop-cocks are fitted to the lighting apparatus—one in the cell, under the control of the prisoner; the other on the outside, under the control of the keeper.

The use of the hammock has been given up, having been replaced in the cellular prisons by an iron table-bedstead. This bedstead is folded up during the day, contains the bedding, and serves as a table. The bedding consists of a mattress, a bolster, two cases for the mattress, two bolster-cases, two woolen blankets, and two pairs of sheets. The mattress and the bolster are made of sea-weed.

The infirmary occupies a part of the building at some distance from the cells, and the sick are distributed into spacious cells, well aired and comfortably warmed. These cells have a capacity of 40 cubic meters, and are provided with the necessary furniture and with clothing suited to the condition of the sick. The dietary is regulated according to a special tariff. The hygienic service leaves nothing to be desired. A cleanliness the most minute, a ventilation active and continual, frequent fumigations, the change of linen and of bedding—in a word, all desirable attentions are accorded to the sick. Independently of the assiduous attentions of which the sick are made the object, they are regularly visited, at least once an hour, and can, at any time, call upon the nurses by means of a signal, whose movement reaches to each bed. Prisoners seriously sick have watchers, and all the necessary measures are taken that they receive the attentions required by their situation.

The proportion of the sick for all the prisons of the kingdom is 2.74 per cent.; the average death-rate is 1.77 per cent.

§ 3. The food given to the prisoners in the penitentiaries of Denmark is healthy, clean, and sufficient, but plain. Dinner is the principal meal. The prisons are dry and airy, and in no private house is greater cleanliness found. During the last three years, the proportion of sick prisoners has been: Men, 2.11 per cent; women, 2.13. During the same period, the death-rate on the total average number of prisoners was: Men, 1.75; women, 1.79.

§ 4. The central administration of France attaches great importance to the hygiene of the prisons, and it takes special pains to free them from every cause of humidity. Even where the buildings which serve for imprisonment are not its own property, it reserves to itself an absolute right of control, as well as of preliminary approval, of all constructions and repairs appertaining to them. It has the power to insure, and it does insure effectively, that sanitary precautions are never neglected. Water is supplied in abundance, and, for the most part, of excellent quality. The ventilation of the prisons is made the object of a very special attention, and is effected by means of draught-chimneys, which cause the miasms to escape and facilitate the renewal of the air. To insure cleanliness in the prison buildings, the regulations prescribe that the floors of the several stories, especially for apartments in common, except the infirmary, be, as far as possible, covered with cement or stucco, in preference to flagging, tiles, or planks. The walls and ceilings are required to be carefully plastered and painted with oil, or

at least washed with lime. These precautions, whose aim is to facilitate the maintenance of cleanliness, are completed by official measures, whose daily or periodical exaction is placed in charge of the contractor of each establishment where the industries are managed by contract. These measures are specified in the contract. They consist principally in frequent and repeated sweepings, washings, and cleanings, as well as in fumigations and in the annual whitewashing of all the buildings.

The means of securing the personal cleanliness of the prisoners are of two kinds. The one, as the daily toilet, the bath, the washing of the feet, and the removal of the beard and long hair of the men, is applied directly to the individual. The other has for its object the linen and the clothing provided for the prisoners' use. They are both as extensive as possible, and are made the subject of numerous and detailed rules in the conditions of the contract and the regulations of the prisons. The position and structure of the water-closets are made a constant study of the administration, and improvements are gradually introduced wherever it is practicable. The prisons are generally lighted with oil, though in some cases with gas. They are commonly heated by stoves; some by hot-air furnaces; but these latter have not proved a great success. Iron bedsteads having been found preferable to all others, they are the only kind now purchased for the prisons of France. The old wooden bedsteads are fast disappearing, and will soon become a thing of the past. The complete bed of each able-bodied prisoner consists of an iron bedstead, a mattress or paillasse, (the former in all central prisons,) a bolster, two sheets, and one coverlet in summer and two in winter. The beds for the sick are larger and of better quality, and are provided each with a pillow and curtains. They have also both a mattress and a paillasse. As a general rule, twelve to thirteen hours are given to labor, (the number cannot exceed that exacted of free laborers;) two to two and one-half to meals and exercise in the open air; and nine to sleep. In the great prisons sick prisoners are treated in the establishment, whatever may be the nature or gravity of their disease. In the minor departmental establishments, the trivial cases are treated in the prison itself; the more serious ones, in the hospital of the place where they are situated. The sanitary system of the central prisons is organized in a manner the most complete. A physician, often resident in the establishment, is attached to each. The infirmaries are arranged in the best possible manner. A special dietary is accorded to the sick, agreeably to the prescriptions of the physician and the conditions of the contract. A dispensary, provided with all necessary medicines, is organized in each central prison, and an apothecary is charged with preparing the prescriptions. Affections of the digestive and respiratory organs and fevers furnish half—often two-thirds—of the inmates in the prison-hospitals. Imprisonment very generally produces a lack of blood, which favors the development or increases the gravity of certain diseases, such as consumption and scrofula. The average number of prisoners in the hospitals of the central prisons was, in 1868, 4 per cent. of men and 5 of women. The average death-rate in the same class of prisons in the same year was: Men 3.65 per cent.; women, 3.80.

§ 5. The five German states represented in the congress reply as follows:

(1) The prisons of Baden are represented as healthy, being commonly built on a dry soil; but they have no special system of sewerage. Water is furnished in sufficient quantity and of good quality. The ventilation is reported good. The cells and corridors are cleaned daily.

Scrupulous attention is everywhere given to cleanliness, insomuch that trades inconsistent with it are not practised. The prisoners have always a full supply of water in their cells. On entrance, each prisoner is washed in his whole person and has his hair cut. The daily ablution of hands and face is required, and every one must have twelve foot-baths and four baths of the entire person per year. They have clean linen weekly, and their outer garments and bed-clothes are washed as often as may be found necessary. They are shaved every week, and their hair is cut as often as needful. They must wash all vessels immediately after using them, and the floors of their cells are scrubbed at least once every week. The cells are lighted with gas. The prisons are heated in a variety of ways: by hot air, by steam, or by stoves of iron or earthenware. Each prisoner has a wooden or iron bedstead; a mattress, of straw, sedge, or varec; a bolster, of the latter substance; two sheets; and one or two counterpanes. The sick have, in addition, cushions, &c. The general distribution of time, without minute accuracy, is ten hours for work, nine and one-half for sleep, and the remaining four and one-half for meals, exercise, religious services, and school. The sick are cared for in special cells, or in common hospitals when their complaints are serious enough to require it. The most common diseases are those of the stomach, scrofula, and the maladies consequent thereupon. An average of (say) 5 per cent. of the prisoners are under the doctor's care, and the death-rate ranges from 1 to 2 per cent.

(2) Bavaria does not claim a good system of sewerage for all her prisons, but in those of recent construction great attention has been paid to this matter. The prisoners receive, three times a day, fresh water, generally of a good quality, for drinking and washing. The prison-rooms are, for the most part, well ventilated by windows. Other systems have not been found very successful. Work-rooms, sleeping-rooms, and corridors are swept daily, washed weekly, and painted yearly. Prisoners must wash the face and hands, clean the mouth, and comb the hair every morning; must take a foot-bath each week or fortnight, and a full bath several times in the year; and must be shaved once a week, and have their hair cut when necessary. Different kinds of water-closets are used. In the cellular prison at Nürnberg there are fixed closets made of cast-iron, which, by means of water-pipes, are cleaned three times every day; the bend or neck which connects the closet with the refuse-pipe remains always full of water, and thereby shuts off all sewer-gas. By means of the water all the matter is carried off, and falls into a reservoir at some distance, whence again the liquid part is drained off into a stream. This arrangement works well. In some other prisons, however, the arrangements are far from perfect, especially where during the night movable closets are put into the bed-rooms. Hot air, hot water, and stoves are the several modes of heating the prisons. The bed consists of: a bedstead of wood or iron, a straw mattress with a tick of unbleached coarse linen, a pillow of the same material, two sheets, a blanket of good sheep's wool, and in winter two. The most frequent forms of disease are those belonging to the respiratory and digestive organs. Four per cent. represents the average of the sick and 2 per cent. the average death-rate.

(3) In Prussia the greatest care is taken to secure a good system of sewerage for the prisons. Everywhere an abundance of water is supplied, and in the majority of prisons it is of good quality. All prisons built within the last forty years have been furnished with an effective system of artificial ventilation, which is generally connected with the heating-apparatus. The prisons are kept scrupulously clean, and, as far

as possible, free from vermin. As regards the means of securing the personal cleanliness of the prisoners, nothing is left to be desired. Besides daily ablutions, rigorously enforced, the upper part of the body and the feet must be washed every Sunday and the whole person at least once a month. Considerable variety shows itself in the water-closet arrangements. This part of the service does not appear to be in a perfectly satisfactory condition. The lighting of the prisons is by gas, petroleum, or oil; in the common dormitories lights are kept burning all night. The prisons of recent construction are heated by hot-water apparatus. The bedsteads are of wood or iron; the latter in all modern prisons. The bedding consists of a straw paillasse and pillow, sheets, and from one to three woolen counterpanes, according to the season, inclosed in a white or colored case of linen or calico. The infirmaries are supplied with hair-mattresses. The hours of labor are from 5 or 6 a. m. (according to the season) to 8 p. m., but subject to various interruptions for meals, rest, exercise, school, and catechising. The hours of sleep are from 8 p. m. to 5 or 6 a. m. Hospitals are found in all the prisons, and are fitted up with everything needed for the treatment of the sick in the best manner. Light cases are treated in the ordinary rooms. The diseases most common are pulmonary, intestinal, and other forms of consumption; renal, dropsical, cerebral, and spinal affections; and chronic ailments of the abdominal organs. Eight per cent. of the prisoners are usually under medical treatment—half in the hospitals and half in their cells or rooms. The death-rate is from 2 to 2½ per cent. on the average number of prisoners.

(4) In Saxony, from the combined results of science and experience, prisoners have received, since 1851, conformably to a regulation regarding meals, sufficient and nourishing food. This regulation provides for a daily variety suited to the season and the promotion of health. For dinners there are ninety, for breakfasts and suppers, twenty-eight, varieties of dishes. On principle, such food is given to the prisoner as is required for the preservation of his life, health, and strength for work. Requisite medical attention in every respect is given to the prisoners. The ventilation is arranged in a simple but effective manner. Drainage (in a technical sense) does not exist, but a system of sluices removes all the underground water. To cleanliness the most strict attention is paid, and it is rigorously insisted on in workshops, dormitories, water-closets, and clothing; there is also a regular use of baths. The daily average of cases of illness is from 1 to 2 per cent.; the annual average of cases of death is 1 to 3 per cent.

(5) The prisons of Würtemberg are provided with a good system of sewerage. Water, for drinking and other purposes, is found in all the prisons in sufficient quantity and of good quality. Prisoners are required to keep their persons, clothing, beds, workshops, dormitories, and all other places about the prisons scrupulously clean. Frequent bathing of the entire person is exacted. The food provided for the prisoners is of good quality and sufficient in quantity. The construction of the water-closets varies with the construction of the prisons; but even the ordinary ones are supplied with a ventilating apparatus for removing the bad air, and are carefully disinfected. Most of the prisons are lighted with gas. The bedsteads are of iron or wood. The bed consists of a straw mattress and bolster, two sheets, one blanket in summer, and two in winter. In reclusion-prisons the inmates whose health requires it may have their own beds, and in the prisons for preliminary detention there is no restriction in this regard. In prisons of reclusion the hours of work are eleven; of

sleep, nine. The remaining four hours are given to meals, recreation, schooling, &c. All the prisons have infirmaries, which are supplied with everything necessary for the sick; but prisoners who are only slightly indisposed are treated elsewhere. The diseased in mind are removed to a lunatic asylum. The average proportion of sick in the infirmaries for the last ten years has been from $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent., and the death-rate from $1\frac{1}{2}$ to $2\frac{3}{4}$ per cent. The diseases are mostly the same as those which prevail among the free population.

§ 6. The allowance of food in the Italian prisons varies according to the class of the prison. In the detention-houses the ration is 1 bowl of soup and 750 grams ($1\frac{1}{4}$ pounds) of bread; in the penitentiaries, the same quantity of bread and two bowls of soup; in the bagnios, the same ration of bread and one bowl of soup, with the addition of a portion of meat once a fortnight. In the detention-prisons the prisoners are allowed to procure their own food if so disposed. In penal establishments worked by contract, and in the bagnios, the prisoners are allowed to use a portion of their *peculium* in increasing their diet, as they choose. In penitentiaries worked by the government the convict who accomplishes within a month a certain amount of work enjoys the next month what is called the "laborer's diet," and if he accomplish an extra quantity he enjoys what is named the "reward diet." The laborer's diet is a daily dish added to the ordinary ration. The reward diet adds to this an allowance of wine (*vin ordinaire*) three times a week. In the old prisons ventilation is provided for as best it may be. In the new constructions the best appliances of science are employed. The water-closets are made movable or fixed, according to the quantity of water necessary to prevent unhealthy effluvia. The average death-rate in 1870, as compared with the average prison-population, was: In the houses of detention, 2.97 per cent. of males and 1.77 per cent. of females; in the penitentiaries it was 5.09 per cent. of men and 3.41 per cent. of women; and in the bagnios, where only men are admitted, 2.78 per cent. The diseases most common in the bagnios are fevers and complaints of the lungs and nervous system; in the penitentiaries, diseases of the lungs and of the organs of sense.

§ 7. No information was furnished on this subject in the report from Mexico, further than the bare statement that it is unnecessary to warm the prisons of that country artificially, on account of the mildness of the climate.

§ 8. In some of the prisons of the Netherlands, the system of sewerage still remains imperfect, but reforms are sought to be everywhere introduced. The quantity of water supplied to the prisoners is without limit, and the quality is generally good, but in some localities it is difficult and expensive to procure it. Most of the prisons are well ventilated; where improvements are still needed, means are employed to accomplish them. Earnest endeavors are everywhere made to insure the cleanliness of the prisons, and for the most part with satisfactory results. The same is true as regards the personal cleanliness of the prisoners. As regards the system of water-closets, preference is generally given to inodorous, portable vessels, with a reservoir outside of the building. The prisons are commonly lighted by gas or petroleum. Lights are kept burning in the dormitories during the night. The system of heating varies in different prisons. In some it is effected by hot water or steam, in others by stoves. The prisoner's bed is made of straw; for the sick, of sea-grass or sea-weed. Hammocks were formerly in very general use, but by degrees they have been replaced by open bedsteads. The bed, complete, consists of a mattress and bolster, two sheets, one coverlet of a coarse

material, and one or two blankets, according to the temperature of the season.

There is no general rule regarding the distribution of time. The hours of labor (including those of school) are ten in summer and nine in winter, and, of sleep, eight and a half in summer and nine in winter. The remainder of the time is at the disposal of the prisoner for meals, rest, study, and reading.

A distinct part of the prison-building serves as an infirmary. In the cellular prisons, cells of double dimensions are appropriated to the sick. The medical service is confined to a military surgeon wherever there is a garrison; to a civil physician in localities where there is no garrison. The entire service is under the inspector-general of the medical service of the army, and is performed in a highly satisfactory manner. The most common diseases in the prisons, as outside, are diseases of the chest, especially phthisis. The average of the sick and of deaths it is not easy to give. It differs a good deal in different prisons, depending on local circumstances and the class or species of prison. The difference in the duration of punishments, which is by no means inconsiderable, exercises a great influence on the proportionate number of the sick and of deaths.

§ 9. A good system of drainage is reported for the Norwegian prisons. The water-supply is unlimited and of good quality. The ventilation of the prisons is reported good. Cleanliness, both of the prisons and prisoners, is enforced to the utmost practicable extent. The larger prisons are lighted with gas; the smaller with oil. In the penitentiary and most of the district-prisons the rooms are warmed by hot water; in the other district-prisons by stoves. In the penitentiary, hammocks are used; in the other penal establishments, wooden bed-frames; in the district-prisons, both sorts. The bedding consists of mattress, pillow, sheets, and blankets. The working-time cannot legally exceed fourteen hours in summer and ten in winter. The actual time employed in labor is less, varying from twelve and a half hours, as the maximum, to ten, as the minimum. The hours of sleep are not stated in the report. Every penal establishment has its own physician. In the district-prisons medical assistance is given by the official physician of the district.

§ 10. In the new prison-constructions of Russia, in spite of the difficulties offered by the climate, the greatest pains are taken to secure good and effective drainage. In the old prisons, everything connected with this subject is in a more or less barbarous state. The same thing is true as regards ventilation. The water-closets are generally primitive. Those used during the day are simply perforated planks above a pit more or less deep; for use by night there are portable vessels of wood. Efforts are now making to find a method which will unite economy, cleanliness, and pure air in a severe climate; but the problem is not easy of solution. The prisons are lighted almost everywhere by tallow candles. They are warmed, for the most part, by stoves. In exceptional prisons the system of Amossoff is employed. In this system tubes for conducting heat unite at a common subterranean furnace or fire-grate. Other systems have been also tried, but none has yet given a satisfactory solution of the difficulty as respects cheapness, climate, security, and other desirable advantages.

In most prisons the prisoners have no bed. They sleep on planks, ranged side by side, and fixed on stools about three feet from the floor. The bed, in prisons where it is found, is the same as everywhere else: a mattress and bolster filled with straw, linen sheets, and a coarse cloth blanket. The large prisons have hospitals in which the sick are treated,

and which are well kept. The more common diseases are scurvy and consumption. There is not a large proportion of sick prisoners. The same cannot be said of the number of deaths. This fact is explained by the kind of life that the prisoners lead before their imprisonment; they had been too much addicted to alcoholic stimulants.

§ 11. The situation and drainage of the prisons of Sweden leave little to be desired. It is quite common to build them on water-courses. The water for the prisoners' use is of good quality and the supply without stint. In the associated prisons there is no apparatus for ventilation; in those on the cellular plan it is otherwise. The strictest cleanliness is enforced. The prisoner, on his admission, has a bath and receives clean clothes. He changes his linen weekly and his sheets every fortnight. Frequent bathing is required, especially in summer. Water-closets are variously constructed, but they are not completely satisfactory. Gas is exceptionally used for lighting, oil and petroleum being commonly employed for that purpose. The larger cellular prisons are heated by hot water; the others, both cellular and associated, by open grates or stoves. The bedsteads are generally of iron in the associate prisons; in the cellular, hammocks are used. The bedding does not differ materially from that supplied in the prisons of other European countries. In winter the hours for sleep are from 8 p. m. to 6 a. m.; in summer from 9 p. m. to 5 a. m. Each morning and evening, half an hour is occupied in washing, in prayer, and in inspection by the officers. Half an hour is allowed for breakfast, the same for supper, and an hour for dinner. On Saturday work finishes at 4 o'clock. In winter those who labor in the open air work as long as it is light. The prisoners in cells walk for half an hour each day in the court of the prison. They work at most ten hours per day; the remainder of their time is spent in reading and receiving instruction.

In the cellular prisons the sick are commonly attended to in their cells; but they have a bed instead of the usual hammock. In serious cases, or in epidemics, the sick are transferred to a special room which is found in every cellular prison. In prisons on the associated system there are infirmaries with spacious and well-ventilated rooms, to which all prisoners are removed who, from sickness or wounds, are unable to work. No prisoner on the sick-list is allowed to remain in the work-rooms or in the common dormitories. The most common diseases are pulmonary consumption, affections of the stomach and intestines, especially among prisoners who work in the open air. During summer scurvy not unfrequently prevails. For five years the average of sick has been, in collective prisons, 4.4 per cent.; in cellular prisons, 4 per cent. In the same period the deaths were, in the collective prisons, 3 per cent.; in cellular prisons, 2 per cent.

§ 12. In the more recently constructed prisons of Switzerland and in those which have undergone extensive alterations, the sanitary appliances are such as the best experience and the best science suggest in regard to drainage, water-supply, ventilation, cleanliness, construction and arrangement of water-closets, heating, lighting, beds and bedding, hospital accommodation, &c. In the others, deficiencies are found in all these respects, varying from an approach to what humanity and sound policy demand to the absence of almost everything which these good guides point out as desirable.

§ 13. There is no general scale of prison dietaries in the United States, and from the diversities of climate and production there could scarcely be one; for what would be salutary at Boston might be otherwise at New Orleans or Charleston. In the Western States fresh meat is much

more freely used than on the sea-board; but in all our prisons meat is much more common than in those of Europe, being generally given twice a day in the state-prisons. Another frequent article of food is Indian meal, made from maize, and served up in the form of "mush," (which is a kind of pudding,) or of "brown bread." This is little used in Europe, and is not to be highly recommended as a common article of diet.

The ventilation and drainage of half the American prisons are reasonably good; of the other half indifferent or bad; in many instances very bad. Probably one-fourth of all the prisons, and a larger proportion of the state-prisons and houses of correction, are kept scrupulously clean; a great many, particularly among the county jails, are foul and filthy. Yet most of them are free from sickness, and the death-rate is not large. It cannot be given with any accuracy, however, for lack of careful statistics. In the cellular prison of Philadelphia, during a period of forty-two years, there were 353 deaths in a total number of 6,416 persons. As each person probably spent about three years in prison on an average, this would give a death-rate of 353 in 20,000, or 17.65 in a thousand, less than 2 per cent., which is not very great. Among an average number of 2,471 prisoners in Massachusetts in 1868, 44 died; in 1869 the average number was 3,043, and the deaths were 55; in 1870 these numbers were 2,971 and 58; in 1871, 3,145 and 68. In an aggregate average population of 11,630 this gives 19.35 for the annual death-rate per thousand in four years, which, all things considered, is less than in Pennsylvania.

§ 14. The sanitary arrangements and condition of the English convict-prisons are reported as good. No epidemic or other diseases prevail in these establishments. They are kept in a high state of cleanliness, and the medical officers are required to examine and report frequently on this point. The average death-rate for the last five years has been 1.37 per cent. for males and 1.45 for females.

In regard to the county and borough prisons the same report substantially was presented to the congress by the government inspectors.

§ 15. The sanitary arrangements in the Irish convict-prisons are reported as excellent, and the condition of the prisons in this regard as altogether satisfactory. The diseases most prevalent are colds and mild febrile and pulmonary affections.

CHAPTER VIII.

REFORMATORY RESULTS.

§ 1. Public punishment has two objects in Austria: the vindication of justice and the reformation of the criminal. The sad fact is acknowledged that the efforts for the moral improvement of prisoners have not been attended with good effect. No proofs exist that prisoners are made better by their punishment. The proportion of those who relapsed and were re-convicted during the years 1868-'70 was: Men, 59 per cent.; women, 54 per cent.

§ 2. The execution of punishment in Belgium has in view the double aim of expiation and reformation; the latter of these objects is steadily kept in view and earnestly sought by the administration. It is claimed to be in proof that in the cellular prisons the moral state of the prisoners is, in general, better at the time of their discharge than at that of

their entrance. Those who manifest evil inclinations are few in number; nearly all have sensibly modified the sentiments with which they were animated at the time of their commitment. Still it would seem that the good resolutions formed in prison yield, to a very great extent, to the temptations to which the liberated prisoners are afterward exposed in free life. Of the prisoners committed in 1872, 78 per cent. had been in prison before, and had fallen again after their discharge. The authors of the report made to the congress claim that this result cannot be charged to the cellular system, since nearly half the penitentiary establishments are still conducted on the congregate plan.

§ 3. The reformation of criminals is made a primary object of their treatment in Denmark, but though the convict generally leaves the prison with good intentions, yet his power of resistance often proves too weak to conquer temptation.

§ 4. The supreme aim of public punishment in France is deterrence, that is to say, the intimidation of criminals, and the repression of crime by that means. The moral regeneration of the convicts is considered as one of the means of action which the state can and ought to employ to diminish the danger of relapse, but not as the principal aim of the penitentiary system. In the case of prisoners sentenced to short terms of imprisonment it is difficult to obtain favorable reformatory results. On the contrary, the criminal so imprisoned is apt to become sensibly deteriorated. In support of this view, the report states that in France the proportion of relapses is in inverse ratio to the duration of the punishment. According to the last official report on criminal justice, of persons prosecuted for crime, those previously convicted formed $42\frac{1}{2}$ per cent., and of misdemeanants, $37\frac{1}{2}$ per cent.

§ 5. The states of the German Empire reporting show the following condition of things:

(1) Punishment is the primary aim of imprisonment in Baden, but it is intended to be so inflicted as to make it contribute to the reformation of the imprisoned. Those who leave the prison are generally better than when they entered it. The proportion of those who return to a criminal course after release is 20 per cent.

(2) In Bavaria, although reformation is looked upon as one great object of the prison system, the favorable results desired are not, upon the whole, obtained. The proportion of re-convictions is about 30 per cent.

(3) The principal aim in Prussian prisons is to satisfy justice, and to make the prisoners feel their punishment as an expiation of their crime. At the same time, all suitable means are employed to effect their moral reformation. Efforts are made to give them habits of order and work, and their minds are influenced by scholastic instruction, spiritual consolation, and moral precepts. Nevertheless, of prisoners sentenced to hard labor, the only class with respect to which reliable statistics exist, 60 to 70 per cent. in the whole kingdom are recidivists, that is, persons who, after their liberation, have again fallen into crime.

(4) In Saxony reformation is made one of the chief objects of imprisonment. The prisoners are in general better on leaving the prison than when they entered it. Their promises that they will live honestly are, in most cases, not mere empty phrases; and when some have failed in their purpose of amendment, the fault is mostly to be traced to existing general social evils. For successful warfare against these, liberated prisoners are wanting in energy.

(5) The primary object of imprisonment in Würtemberg is punishment; yet it is intended that the punishment shall be so administered as to effect the moral improvement of the prisoners. Of the inmates

of the prisons, more than a third—about 36 per cent.—are there on re-conviction.

§ 6. The administration of the Italian prisons finds it a difficult task to decide the question whether its penitentiary system answers the end of reforming the criminal, and whether on discharge the prisoner is morally better or worse. The relapses into crime scarcely exceed 18 per cent. on the whole body of criminals; but, in 1871, of the criminals sentenced to an imprisonment of more than a year, 28 per cent. were recidivists. Concerning the number of re-convictions, a most important fact may be gathered from the registered statistics of the administration relative to the time elapsing between the discharge and the committal of fresh crime. From these it is found that of recidivists sentenced to the bagnios, 27 per cent. relapse within the first year, 16 per cent. within the first two years, and 57 per cent. beyond that space of time. The re-convictions of those sentenced to the penitentiaries are 37 per cent. within the first year, 19 per cent. within two years, and 44 per cent. beyond that lapse of time; and among the females, 46 per cent. within the first year, 16 per cent. within two years, and 38 per cent. beyond that time.

§ 7. Deterrence has been considered in Mexico the primary aim of public punishment, though the moral reform of the criminal has not been lost sight of. So far, the prisoners leave their prison-house in a worse state morally than when they entered it; but it is believed that the changes recently made in the penal code will improve this state of things.

§ 8. The aim in the Netherlands is to make the punishment contribute, as far as possible, to the reformation of prisoners. The proportion of recidivists given by the (admitted) imperfect statistics of the country is, for the general mass of prisons, 25 per cent.; for the central (higher) prisons, 38 per cent.

§ 9. Protection of society by deterring from crime, that is, by intimidation, is regarded in Norway as the primary end of prisons and imprisonment; but the reformation of the prisoners is also considered a chief point. Of the inmates of the penitentiary, about 39 per cent. are there on re-conviction. With regard to other prisons, no information is given in the report. Whether the prisons have an improving or deteriorating effect upon their inmates is a question declared to be difficult to answer in a satisfactory manner.

§ 10. In Russia, the declared aim of all penal legislation is the reformation of the inmates of the prisons; but this aim is very far from having been attained. Indeed, the prisoners are admitted to be worse on their discharge than on their entry, since the liberated are a pest to the country. It is impossible to state the proportion of recommitments, for the want of statistics.

§ 11. The information furnished by Sweden on this subject is given in the words of the report, as follows:

The legislation, as well as the reform of prisons, initiated by King Oscar I, commenced in 1840. In consequence, thirty-eight new cellular prisons were built in all the provinces of the kingdom. They have all aimed at the moral reformation of the prisoners. But as all those who are sentenced to penal labor for more than two years are imprisoned in the large collective prisons with common dormitories for a large number of prisoners, and as they work altogether during the day for private contractors, their amendment has not been fully attained. On the other hand, the cellular prisons are regarded as not having corrupted the prisoners. Those who have been imprisoned only in cellular prisons have not been greatly hindered by their imprisonment from finding employment in the neighborhood of their home. During the last five years the number of recidivists has risen on the average to 28 per cent. But since Sweden suffered from scarcity of food in 1866, 1867, and 1868, and consequently it was difficult for men to find work, an extraordinary addition was made to the number of crimes against

property. Hence the percentage of recidivists, before mentioned, is considerably above the normal average.

§ 12. For Switzerland, the exact words of the report are also given:

The study of social questions, undertaken by numerous societies of public utility, and the reports presented in the meetings of the Swiss Society for the Reform of the Penal System and of Prison Discipline, have enlightened public opinion to such a degree that the legislative assemblies of most of the cantons are favorable to the propositions made with a view to the introduction of penitentiary reform into all our prisons. On the other hand, public opinion declares itself in favor of expenditures designed to improve the condition of criminals only after the state has supplied the country with hospitals, insane-asylums, orphan-houses, schools, &c., that is to say, with all needful establishments designed for the honest poor. In all the cantons where these institutions are found, the old theory of penal repression, based on vengeance, has given place to more humane ideas, the responsibility resting on society as regards the causes of crimes is better understood, and the system introduced into most of the prisons has for its aim the reformation of the prisoners. It is true that the penal codes of many of the cantons are based on punishment, intimidation, and expiation. But despite the text of the codes, which was often written prior to the reform of the prisons, it is sought in the penitentiaries to employ agencies which may combine at once repression and reformation. While in some cantons (those of the two inferior groups) the principle of repression is alone admitted, we see the canton of Zürich setting a good example by declaring, in its penal code, October, 1870, that the application of punishment ought positively to have for its object the reformation of the criminal. This principle, which, some day, will be applied in its whole length and breadth, dates only from yesterday. Hence we need not be surprised that the country is found in that transitional period when the principle of intimidation still struggles against the moral reform of criminals. The spirit of vengeance is not entirely extinguished; it still shows itself whenever any atrocious crime has just been committed. But the moment of indignation is transient, which shows that an immense progress has already been realized, and that its development proceeds without cessation, in spite of occasional reactionary movements.

The favorable results obtained in the moral reformation of prisoners subjected to the penitentiary *régime* of the modern establishments incite the others to a revision of their penal codes. No doubt there are many criminals and correctionals in whose case the influence of the improved penitentiary system does not make itself felt. As, among the insane, there are incurable patients, so persons in whom the moral sense has been completely perverted suffer themselves to be impressed in a penitentiary only by the evil which they find there, and show themselves insensible to the good which is sought to be accomplished. On the other hand, the greater number are far from being depraved, and the moral force of those who form this class increases in the prisons. At the moment of their liberation they feel themselves reconciled to society, and they have the firm intention of regaining, by their good conduct and by honest toil, the esteem of their fellow-citizens. But it is not easy for a prisoner to carry into effect his good resolutions. He has to confront many prejudices, to conquer many obstacles, and to resist many temptations, to which he would sometimes succumb if some charitable hand were not extended for his succor.

The proportional number of recidivists can be given only approximately. The statistics in the different cantons are not made out in a uniform manner. In some establishments, account is made of all private sentences—police, correctional, and criminal; in others, they embrace only those which have been pronounced within the canton or even notice only the punishments undergone in the same establishment. The greater part of the cantons expel from their territory liberated prisoners of foreign birth, and give themselves no further trouble about them; so that it may happen that the cantons whose penitentiaries contain numerous non-residents of the canton may have fewer recidivists to be registered. In spite of the defective state of the statistics, we may estimate an average of 30 to 45 per cent. as the proportion of recidivists in cantons where the penitentiary system has made least progress, and from 19 to 25 per cent. as that of the cantons whose penitentiaries are well organized.

§ 13. In very few of the prisons of the United States, taking those of all classes into account, is the reformation of criminals now made the primary object, and, as a matter of fact, numbers of prisoners leave the prison no better than they entered it. Many are made worse rather than better; and this is particularly the case in the county jails and with short sentenced prisoners in the district prisons. In our best prisons this is otherwise; but there are very few officers who can truly say that their prison discipline has reformed the convicts. Any statements made

regarding the proportion of re-convicted criminals in our prisons would only be misleading, owing to the very imperfect state of our penitentiary statistics.

§ 14. Little information is afforded on this subject in the reports submitted to the congress from England and Ireland.

CHAPTER IX.

PRISON OFFICERS—THEIR QUALIFICATIONS AND TRAINING.

§ 1. It is held by the authors of the report submitted on the part of Austria that; besides a technical knowledge of their calling, prison-officers should possess a good general education, and have experience of life, knowledge of human character, firmness, and a serious and humane spirit. The opinion is expressed that the greater number of the officers at present employed in the Austrian prisons are men of this character. Special training is not provided for this class of public servants. It is thought that the experience necessary for a prison officer may be best acquired by actual service in a prison.

§ 2. In Belgium it is held that the head of a penitentiary establishment should be thoroughly acquainted with everything relating to the moral, disciplinary, economic, and industrial administration. He has, so to speak, the charge of souls. He must be just, firm, intelligent, conciliatory; must know men, and especially criminals; and must possess, in a high degree, the attribute of probity. Above all, he must be animated by sentiments profoundly religious, for it is Christian devotion alone that can sustain him in the path of his duty and give him the force and steadfastness necessary to overcome the obstacles which will be sure to obstruct his progress. The keepers are moral agents; they must offer guarantees of morality, intelligence, zeal, and humanity. Their special service is of a nature to require that they be in the vigor of their age; that they have good health and a robust constitution; that they possess an energetic character; and that they have a good primary education, and, if possible, a knowledge of some one of the trades taught in the prison in which they serve. Special training-schools for the subordinate officers would be highly desirable, as they are apt to enter on their functions without the full preparation required by their mission. A school for keepers has existed for some years in the penitentiary of Louvain. The directors are recruited from the *personnel* of the administration, where, in passing through the successive grades, they have necessarily acquired the requisite knowledge. Special examinations are a condition precedent of their appointment.

§ 3. Prison officers in Denmark are appointed partly by the government, partly by the prison-inspector. Their appointment and discharge are totally independent of political and all other considerations not bearing directly on their qualifications and efficiency. There are no special training-schools for prison officers. It is thought that such would be too costly for a small country like Denmark.

§ 4. The management of penitentiary establishments, it is held in France, requires technical and administrative knowledge of great breadth, and offers, besides, special difficulties, arising out of the complicated organization of the service. It demands a profound knowledge of business, of ministerial regulations and details, and an unremitting application, a quality essentially requisite in all directors. The admin-

istrator who finds himself face to face with a contractor, whose interests are directly antagonistic to those of the state, ought to unite an unceasing watchfulness with an intelligent control. The principal duties of the administrator of penitentiary establishments—such as the organization of the prison labor, the examination of tariffs of labor, the maintenance of discipline in the midst of a perverted population, the choice and employment of means to awaken in the prisoners thoughts of repentance and ideas of moral renovation—all these duties, and others analogous, demand a special aptitude, fortified by an experience more or less extended. Penetrated with the idea that the direction of the penitentiary establishments cannot be confided, without the gravest risks, to agents who do not offer the most trustworthy guarantees, the superior administration has established rigid rules to guard against the bestowment of the elevated functions of the service upon agents whose aptitude and experience would leave the least room for doubt. In the same order of ideas, it exacts, in the case of all its agents, of whatever degree, the knowledge demanded by the positions which they are to fill, and makes their promotion dependent on conditions of time and experience, varying according to the importance of the trusts to which they aspire. In short, to keep out of the service of the prisons agents unable to offer the guarantees desired, a ministerial decree, under date of the 25th of March, 1867, instituted, in the ministry of the interior, a commission charged with the examination of candidates for employment in the active service of the central and departmental prisons. The programme of the required examination comprises the following points: Writing, grammar, arithmetic, the principles of accounts, history, and geography, (principally of France,) general notions of the penal system and of criminal procedure, general ideas of civil law, the civil and judicial administration, and the most important provisions of the laws, decrees, and ordinances relating to the penitentiary *régime*. The examination includes, in addition, a written composition. The result is, that the *personnel* of the prison service is composed, for the most part, of agents, enlightened, capable, and up to the height of the duties with which they are charged. Many of the higher officers unite to all the aptitudes required in the director of a penitentiary establishment a rare administrative ability and an extensive knowledge of criminality. In the lower ranks of the *personnel*, a majority of the agents are upright, zealous, and earnestly devoted to their duties.

There do not exist in France schools especially devoted to the education of prison officers. The best school in matters of this kind is thought to be that of practice and experience.

§ 5. The following summary is offered of the reports from the German states on this subject:

(1) In Baden, the qualities deemed necessary in a prison officer are: Integrity, devotion, energy, firmness, kindness, physical and moral courage, and a calm and brave spirit. These qualities are believed to be possessed by the superior and by most of the inferior officers.

Special schools for the education of prison officers have not been established, nor is their establishment recommended, because the work of prison officers can, it is thought, be best learned by practice.

(2) To be eligible to the directorship of a prison in Bavaria, the candidates must have studied the prescribed subjects in philosophy and jurisprudence, and passed the examination admitting them to act as judges. Candidates for the position of physician, chaplain, or teacher must have completed the studies connected with their several professions and undergone satisfactory examinations. Special schools do not

exist for the education and training of prison officers. Such schools, it is held, would be desirable, since much harm is done by ignorance in the treatment of prisoners.

(3) The report for Prussia holds that, besides personal integrity, sufficient general and special knowledge, directors and superior officers should be gifted with true and keen observation, a delicate discernment of individual character, and ability to read the secret thoughts of prisoners. They should also be energetic and strict, and yet kind and entirely impartial. Finally, they should possess some administrative capacity, and be, to a certain extent, familiar with the technical part of the trades, and have some knowledge of farming. As regards the subalterns, good directors will make them useful officers if they possess thorough honesty, imperturbable coolness, unshakable firmness mixed with gentleness, and a sufficient amount of intelligence and of moral and religious instruction.

No special training-schools exist. It is thought exceedingly desirable that such schools should be established for the education of the inferior officers, whose instruction, gained at a primary school, is seldom wide enough to enable them to perfect their knowledge afterward sufficiently to do anything beyond routine work.

(4) In Saxony the officers are appointed by the ministry of the interior. They are at first employed on trial, and are dismissed if found incompetent. Political influence does not enter into consideration. The qualification of the officers is on the average good. Separate schools for training officers do not exist. Most of the superior officers undergo, before their definitive appointment, a practical training in one of the penitentiaries. The higher the duties to be fulfilled become, and the more carefully the system of individual treatment is carried out, the more a knowledge of these duties approaches to science, the more necessary are the studies of pedagogy and psychology, and the more it becomes absolutely requisite to make special studies, in order to assist in attaining the highest efficiency in the administration. Just as no teacher can now be chosen, contrary to what was the case in times past, from men of another calling, but must be a man who has received a thorough education in his special branch, so the officers of prisons will be required to have special training, and, therefore, in future, special schools will become a necessity.

(5) In Würtemberg there are no special schools for the education of prison officers. The directors are usually men who have acted as magistrates, and have been formerly engaged in judicial duties, although ability to act as a judge is not indispensable for gaining the office of a director. The keepers are mostly non-commissioned officers who have left the army.

§ 6. Prison officers in Italy are proposed by the local authorities and confirmed by a ministerial decree. In making choice of them, no weight is given to their political opinions, but only to their probity and zeal. As prison officers require special gifts and knowledge, added to uprightness and intelligence, faithfully to fulfill their trust, the administration has for some time entertained the idea of establishing preparatory schools, and is studying the best plan for their regulation.

§ 7. The only item furnished on this head by the Mexican report is to the effect that schools for the special education of prison officers do not exist in the republic.

§ 8. In the Netherlands, it is deemed to be necessary that the directors and employés of prisons be men of tried morality, intelligent, and gifted with tact and with the knowledge necessary to inspire the respect

of the prisoners, even without the use of a severe discipline. This respect depends upon the spirit of justice, equity, and humanity which they exhibit in their relations with the prisoners. In the directors especially, there is needed a high degree of mental culture and an enlightened understanding of their duties; we might say, indeed, of their mission. A knowledge of the more important foreign languages is necessary, that they may be able to read and study the best writings on prison discipline and to communicate with the foreign prisoners. It is admitted in the report that the majority of the directors and employés of the prisons do not possess these talents and qualities, a fact which is due chiefly to the circumstance that the salaries are too low, and that the service of the prison officers is, in general, too onerous, and held in too little esteem. As a consequence, young men of good family and education refuse to enter upon this career.

There are no schools especially designed for the education of prison officers. The best school is thought to be a well-organized and well-governed prison, where are offered to the young employés the means of acquiring knowledge and developing their talents, by the reading and study of the best writings on the subject of prisons.

§ 9. The qualities deemed requisite in Norway in the higher prison functionaries are a good education, probity, firmness of character, and special aptitude for their work. The compensation at present paid to functionaries of the lower grade is so small that no great claims can be made upon them. Sobriety, punctuality, firmness in action, a mastery of the more common branches of learning, and the knowledge of some trade are the qualifications most valued. There are no special training schools for prison officers, nor, considering the actual circumstances of the country, are such likely to be soon established. No opinion is expressed in the report on the abstract question of their expediency.

§ 10. Integrity, humanity, punctuality, and intelligence are held in Russia to be the essential qualities of a good prison officer. The greater part of the actual employés are far from possessing these qualifications to the extent to be desired. The principal cause of this deficiency is the scanty recompense accorded them. There are no special schools for the education and training of prison officers. The author of the report, Count Sollohub, sees no urgent need of such establishments, since, in his view, the essential character of this class of officials is rather moral than pedagogic. The practical part, he thinks, can be acquired in some days. The count, however, thinks it desirable that there be established in the administration of prisons a system of gradual promotion, and thus of special service, in harmony with all the other branches of the public service.

§ 11. The qualifications deemed in Sweden essential to a good prison officer are a calm and even temper, a character humane and serious, a spirit austere and just, and the most exact order and punctuality in the performance of his duties. There are no special establishments for the instruction and education of this class of officers. The need of such institutions makes itself more and more felt by reason of the special knowledge and high moral tone required in these officers. The opinion is expressed that, while such special schools are wanting, persons desirous of entering the penitentiary service ought, prior to a full admission to that service, to be required to serve for some time in a well-conducted prison. Still, as even there they would acquire only the routine, and not the broad knowledge necessary for the due fulfillment of such functions as are required of them, it is recommended in the report that there be established a penitentiary normal school, that is, an institution for

the professional education of young men who aspire to employment in the penitentiary service.

§ 12. In Switzerland the greatest importance is attached to the choice of officers charged with the treatment of prisoners, since it is well understood that prisons badly administered, instead of being hospitals for moral diseases, become rather nurseries of criminals. Several of the more recently constructed and better-organized penitentiaries are presided over by men eminently qualified for their position, and they are aided by bands of intelligent employés, who contribute effectively to the mission which penitentiary education proposes to itself. Nevertheless, complaint is made, on all sides, of the difficulty experienced in finding, for the corps of subordinate employés, men possessing the requisite qualities and aptitudes. Schools designed for the special education of prison officers do not exist in Switzerland. It is generally felt that such schools would render an excellent service, especially if a just and sound idea should be given in them of the nature and aim of penitentiary treatment. A school of this kind would have the immense advantage of preparing officers who, at present, acquire their experience at the expense of the institution. Normal schools for the employés might, it is thought, be organized in penitentiary establishments selected for that purpose, in which candidates might pursue a theoretical course, and might also be practically initiated into all the branches of the service. In a well-organized and ably managed penitentiary novices who possess the necessary aptitudes become in a short time entirely competent to the discharge of their functions.

§ 13. The bane of prison administration in the United States is instability, resulting from the frequent change of officers, which is itself a consequence of the wide extent to which political influence enters as an element into their appointment. Some States have measurably escaped this influence, but they form rare exceptions to the general rule. But public opinion is becoming more enlightened on this subject; and, in proportion as it gains light and vigor, the tendency toward reform by the elimination of this malign power develops itself and becomes stronger day by day. Except as lowered through political influence, the average qualifications and efficiency of prison officers in America are as good as in other countries; but the lack of an effective system of control and inspection often makes our prisons less creditable to their officers than the real merit of the latter deserves. There are no special training schools for prison officers in the United States, but veteran and experienced superintendents, like General Pilsbury, Mr. Brockway, and a few others that might be named, do, in the course of time, train a considerable number of good officers. The clearest and most authoritative exposition of the state of public opinion among us as to the policy of such institutions is contained in the seventh resolution adopted by the National Penitentiary Congress of Cincinnati, in these words:

Special training, as well as high qualities of head and heart, is required to make a good prison or reformatory officer. Then only will the administration of public punishment become scientific, uniform, and successful, when it is raised to the dignity of a profession, and men are specially trained for it, as they are for other pursuits.

§ 14. In the reports relative to the prisons of England and Ireland, little information is communicated on this subject.

CHAPTER X.

SENTENCES.

§ 1. It is held in Austria that the frequent repetition of short sentences is rather injurious than beneficial. They blunt the feelings of the prisoner both as regards the punishment itself and the degradation connected with it, and their customary effect is to confirm him in criminality. By Austrian law, former conviction is looked upon as an aggravating circumstance, and the judge is obliged to give a severer sentence on re-conviction, even though the offense be of a different class. The disciplinary treatment of re-convicted persons is not, as a rule, made more severe than that to which those sentenced for a first offense are subjected.

§ 2. Recidivists are more severely punished in Belgium than persons committed for a first offense. Nothing is said in the Belgian report as to the good or bad effect of repeated short sentences, the reporters regarding this as a question peculiar to the criminal legislation and practice of the United States; a view of the matter which the undersigned, with all due respect, believes to be erroneous.

§ 3. The criminal courts of Denmark give short sentences for minor offenses. This increases the number of crimes, though not of criminals, the effect of the short sentences being that the so-called habitual criminals, more frequently now than before the present penal code was promulgated, both enter and quit the prisons.

§ 4. The authors of the report submitted from France appear to be somewhat perplexed as to the meaning of the expression "minor offenses," used in the question. But whether to be understood in the sense of those trivial violations of law called "contraventions" in the French criminal code, or in the sense of misdemeanors of no great gravity, both of which classes of offense are visited in France with but trifling penalties, it is confessed that these penalties do not prevent a repetition, nor, indeed, the frequent repetition, of the acts against which they are directed.

A relapse, which, in the legal sense, is the commission after a penal sentence of a new criminal act, receives little favor from the French law. The circumstance of a prior conviction, and the greater perversity shown by a repetition of the offense, seems, in effect, to demand from the legislator an increase of punishment. Doubtless, neither theft nor homicide changes its nature because committed a second time; but a crime has two elements, the substance of the act and the criminality of its author. The legislator has thought it a duty to take both these circumstances into consideration in measuring the punishment.

§ 5. (1) Of the German states, Baden answers that repeated short sentences for trivial offenses produce no good effect; and, therefore, the penal code of the empire visits recidivists with punishments of a longer duration.

(2) Bavaria returns a like response. Frequent punishments for minor offenses have no good influence; either the prisoners become embittered, or the punishments, on account of their frequency, lose their effect. More, it is believed, can be done in these cases by reproof and teaching than by punishment. Reconviction, especially for robbery, theft, and the concealment of stolen goods, is very heavily punished.

(3) Prussia replies in the same sense, both as regards the inefficiency of repeated short imprisonments and the necessity for increased severity of the punishment on reconviction.

(4) The answer of Saxony is in the following words:

The practice of courts of justice of passing sentences of short duration of imprisonment for slight offenses, and of repeating them in case of relapse, does not exist, because the penal law of the German Empire, even for theft a third time, orders imprisonment in a penitentiary, provided there are no extenuating circumstances. What effect this practice will have in regard to increase or decrease of crimes is yet problematical, and requires further satisfactory experience.

§ 6. Recidivists, in Italy, always receive severer punishment than offenders on first conviction. But the Italian criminal code does not regard as crimes the class of offenses known as "contraventions;" hence persons guilty of them are not accounted recidivists in the legal sense, and judicial statistics take no notice of such infractions of law, whatever the number of times they may have been committed by the same person. The whole question of sentences is considered so important, that the prison reform commission, recently created by royal decree, has thought fit to make it the subject of a special study.

§ 7. The commission which prepared the report to the congress for Mexico is of the opinion that evil consequences result from the fact that imprisonment is inflicted for slight offenses, even in the case of a first transgression, especially if the offender be sent to an establishment where prisoners are kept in association.

Reconviction receives the punishment which, the attenuating or aggravating circumstance of the case being considered, ought to be awarded to the offense itself, with an increase of one-sixth, if this is less than the former, of one-fourth if it is of the same gravity, and of one-third if it is greater. If the offender has been pardoned for a previous offense, and if it is not for the first time that he relapses into crime, the increase of punishment may be doubled.

§ 8. It is not thought in the Netherlands that repeated sentences to short imprisonments produce any good effect upon the prisoner. A relapse may give occasion to an increase of the punishment in the ratio of one-third, when the first sentence was for more than a year's imprisonment; and in all cases it is a circumstance which may determine the judge to award the maximum of punishment allowed by the law.

§ 9. Norway answers that experience has not certainly determined what effect repeated short sentences have upon the criminal. A prior conviction increases the punishment to be inflicted by a subsequent sentence; but as regards the treatment of prisoners during their incarceration, all receive the same.

§ 10. The report for Russia uses this strong language: "Not only do repeated short sentences produce no good effect, but they create criminals by profession."

A subsequent offense has the effect to increase the severity of the punishment.

§ 11. Short imprisonments for minor offenses are believed, in Sweden, to produce upon the prisoner an unfavorable rather than a favorable influence.

The punishment of thieves is gradually increased on each subsequent conviction. A fourth sentence may inflict ten years of hard labor, and in very grave cases the sentence may even be for life. But the national parliament has recently determined to lower the scale of punishment for recidivists convicted of theft.

§ 12. The directors of the Swiss penitentiaries are unanimous in regarding repeated short sentences for minor offenses as a pernicious judicial practice which is followed without reflection. The sentiment of justice, as well as the moral reformation of the prisoner, requires that the repression be more serious and more adequately protracted in

the case of individuals who take on the habit of crime, and who threaten to make it the basis of their character. The effect of these short imprisonments becomes worse on each successive conviction. The recidivists fall deeper and deeper, and the prison cannot lift them up. During the short stay they make in the penitentiary establishment, it is impossible to teach them a trade or even to make them apt at work. The recidivists sentenced correctionally have more or less lost the moral sense and self-respect. The influence of the penitentiary education cannot affect the individual of this class who, on entering the establishment, counts the exact number of days which separate him from freedom. Such prisoners undergo, more or less patiently, the restraint imposed upon them; they are indifferent, and little heed either the present or the future which awaits them.

The existing codes in the several cantons denounce a severer punishment against prisoners convicted more than once. Some sentence them to the maximum of the punishment incurred; others add to this punishment its moiety, and even more, in excess of the maximum. Every sentence for an offense exceeding six months becomes an aggravating circumstance in the case of the person who, having suffered it, is prosecuted criminally.

§ 13. It is the practice of courts in the United States to give short sentences for minor offenses, and to repeat them often in the case of the same person. The effect of this here, as everywhere else, is and must be to increase crime, as our prisons are now managed. Such is the unanimous opinion of all prison keepers, so far as known, in this country.

§ 14. The reports for England and Ireland are silent on this point.

CHAPTER XI.

IMPRISONMENT FOR DEBT.

§ 1. Imprisonment for debt was abolished in Austria by law May 4, 1868, and only a precautionary arrest can take place when the debtor, while the action is pending, is accused of an attempt to escape. Such an arrest is merely a deprivation of liberty, and the prisoner is allowed such advantages as are consistent with simple arrest.

§ 2. Debtors' prisons still exist in Belgium, but they are empty. Cases of incarceration for debt have become very rare since the publication of the law of the 27th of July, 1871. The treatment to which imprisoned debtors are subjected is not the same as that applied to criminals. They occupy special cells, have the exclusive enjoyment of an exercise-yard, and may communicate with each other, receive four visits a week from their relatives and from persons with whom they have business relations, and may correspond freely with the outside world.

§ 3. No information is afforded on this point in the report for Denmark.

§ 4. In France the law of the 22d of July, 1867, put an end to imprisonment for debt in commercial and civil matters and in those in which foreigners are concerned. The restraint of the body exists no longer, except in matters criminal, correctional, and of simple police. The usage has just been re-established as regards the payment of moneys due to the state. In such cases the public minister is bound to take care that persons imprisoned for debts to the state receive the same rations as the other prisoners who are in the charge of the administration.

The decree of bankruptcy may order the placing of the person of the bankrupt in a debtor-prison, and, if there is no such prison, in a part of the house of arrest reserved for that purpose. This is a measure which prudence almost always dictates. If the debtor is simply unfortunate, a safe conduct soon restores him to his family and to liberty; if the examination of his conduct justifies rigorous measures, it is thus made impossible for him to liberate himself by flight. The arrest and imprisonment of the bankrupt must be preceded by the consignment, on the part of the commissioners of bankruptcy, of the means of living, and, in case of insufficient means for this purpose, the advance of the moneys to be consigned is made from the public treasure, on the order of the commissioner, given at the request of the public ministry. The French law, as is thus seen, places the incarcerated bankrupt in a situation altogether different from that of ordinary prisoners.

§ 5. The German states report as follows:

(1) Imprisonment for debt does not exist in Baden.

(2) In the rare instances of imprisonment for debt in Bavaria, the treatment of such prisoners is milder than that of other prisoners. It is a mere arrest; they have almost unrestricted liberty as regards correspondence and the receiving of visits; their food is better; and they are separated from the other prisoners.

(3) In commercial and civil matters imprisonment for debt no longer exists in Prussia. It is, however, allowed when it becomes necessary to secure an examination or a judicial prosecution, or to execute a distress warrant. The treatment of prisoners for debt is totally different from that of criminals.

(4) No information on this point was furnished by Saxony.

(5) There is no imprisonment for debt in Würtemberg.

§ 6. Imprisonment for debt is still practised in Italy. In detention-prisons of any considerable size, there are commonly sections destined to the imprisonment of civil debtors. In none of them is there wanting at least an apartment for whomever is imprisoned on the demand of his creditor. The number of persons imprisoned for debt is exceedingly small. The maintenance of the debtor is a charge upon the creditor, and his treatment differs from that of other prisoners maintained at the charge of the state.

§ 7. Imprisonment for debt was abolished in Mexico as early as 1812, and has never been revived.

§ 8. This practice still prevails in the Netherlands. Persons imprisoned for debt are placed in the houses of detention and of arrest; sometimes in the cantonal prisons. They are entered on a special register, and are not confounded with other prisoners. In the greater part of the prisons the best apartments are assigned to them and a little better furniture. They do not wear the prison-dress, unless, indeed, they have no other; and their food is of a better quality.

§ 9. Imprisonment for debt still exists in Norway, but the right is seldom used. Its abolishment has been moved, and it cannot be long delayed. In the district-prisons rooms are arranged for receiving prisoners for debt, but they are furnished nearly in the same manner as common dwelling-rooms, and the constraint to which such prisoners are subject is only intended to secure their presence and to prevent infractions on prison discipline, while in other respects, especially as regards their meals and occupation, they are not ranged in the class of other prisoners.

§ 10. Debtors' prisons are still found in Russia in all their rigor; but a special commission has just formulated a project according to which

imprisonment for debt will be tolerated only in a limited number of cases. The treatment of persons thus imprisoned is, however, far less severe than that of other classes of prisoners.

§ 11. Since 1868 imprisonment for debt is permitted in Sweden only in cases where the debtor refuses to declare under oath that he is without resources. This class of prisoners is treated like those awaiting trial. They are not required to work, and have the right of procuring better food and more comforts.

§ 12. Prisons for debt exist only in a few cantons of Switzerland, and even where such prisons are still found, the constraint of the body has fallen into disuse. In a number of cantons, the state authorizes the restraint of the body, in default of payment of the expenses of justice; but this imprisonment is of short duration, and often is not inflicted at all. This punishment is regarded as correctional, and has no character of infamy.

§ 13. Imprisonment for debt has been abolished in most if not all the States of the American Union in all cases, except where fraud is known or suspected.

§ 14. No information was communicated on this subject from England or Ireland.

CHAPTER XII.

CAUSES OF CRIME.

§ 1. The report from Austria names, as chief causes of crime in that country, dislike to work, the desire for luxuries, impatience of restraint, want of education, and the poverty so closely allied to ignorance.

§ 2. The principal causes of crime in Belgium are stated to be, in the army, want of occupation and the system of substitution; in civil life, oblivion of religious and moral principles, ignorance of duty, want of a trade or some regular calling, artificial wants, drunkenness, libertinism, distaste for work, and consequent idleness.

§ 3. The crime most frequent in Denmark is the violation of the right of property. Three-fourths of the prisoners are sentenced for theft. The cause of stealing is rarely undeserved distress; most commonly it is idleness, the desire for lawful or unlawful pleasures, or habits of drinking. These vices generally result from, or are associated with, a neglected education.

§ 4. The report from the French government states that there is reason to believe that in France, as in many other countries, the insufficiency of moral education, the general defect of intellectual culture, and the want of an industrial calling, not opposing to the appetites and instincts a barrier sufficiently strong, leave an open road to crimes and misdemeanors. These offenses are afterward modified and perpetrated under influences springing from the circumstances by which their authors are habitually surrounded. It is thus that, on the frontiers, the populations, seeing in the code of fiscal laws only an enemy of natural right, have little hesitation, for the purpose of avoiding the payment of taxes, to sacrifice the lives of the agents charged with collecting them. In the cities, the laborer, seduced by ideas of a luxury which his labor does not and ought not to give him, suffers himself to be drawn on to attempts against property and, too often, against social order. The inhabitant of the country, who has under his eyes only the spectacle of a

productive soil parceled out to infinity by the law of inheritance, demands violently, sometimes even at the cost of his neighbor's life, the enlargement of the patch that belongs to himself.

To these evils, of which France has no monopoly, the report asks, Does there exist a remedy which will prove absolute and complete? It may be doubted; but it is certain that, in elevating morality, in fortifying the heart, in enlarging the boundaries of knowledge, the practical ability of men would be increased, and the effects of these evils would be diminished by lessening their causes.

§ 5. Germany answers thus:

(1) Baden says: "Thirst for pleasure," with a reference to 1 John, 2: 16.

(2) As principal causes of crime in Bavaria, are mentioned: 1. Want of religious teaching. 2. Abnormal family relations. According to a law that existed up to the year 1868, marriage between persons who possessed no landed property was exceedingly difficult, and, in consequence, illegitimate births were very numerous. As a result of the want of the beneficial influence which a family-life exercises, illegitimate-born form a considerable proportion of all prisoners. 3. Neglected education, especially in those parts where children are employed in the guarding of cattle or in working in manufactories. 4. Rough manners and customs. In some parts of Bavaria it is still a custom of the peasants to carry long stiletto-like knives when visiting public-houses and dancing-places; and thus, on Sundays and holidays, the slightest cause leads them to inflict on each other severe injuries.

§ 6. The inmates of Italian prisons, in 1871, were in the following proportions: For crimes against the person, in the bagnios, all males, 46 per cent.; in the penitentiaries, males 35 per cent.; females, 28 per cent. Crimes against property, in the bagnios, 30 per cent.; in the penitentiaries, males, 47 per cent.; females, 53 per cent. The chief causes of crime, accordingly, are stated to be cupidity, revenge, anger, and illicit passion.

§ 7. The answer returned by the Mexican government is so interesting, as well as able, that it is given, without condensation, in the words of the commission which prepared the report. The commissioners say:

Among the most general causes of crime in our country are want of education in the lower classes, abuse of intoxicating drinks, and poverty. Among the temporary and transitory causes which occasion the crimes and offenses committed in our country, the commission thinks that the most active are the following: The prolongation of civil war, the impressment to obtain soldiers, the bad state of our prisons, the commotion created in the religious faith of society by the innovations made in ecclesiastical matters, the want of preventive police, and the bad administration of justice.

Though all our statesmen and philanthropists have of late become aware of the importance and convenience to the public of the establishment of the penitentiary system, the financial difficulties, the little stability of our governments, and the constant necessity in which we have been placed to defend our existence against the attempts of revolutionary bands—an object which has almost exclusively absorbed our attention—have until now prevented the realization of this great social reform. Consequently, great criminals and petty offenders being indiscriminately mixed in our prisons, the contact, the association, and the example of the former have exercised a baneful influence on the latter; and, generally, those who, having offended against the law, are sent to our prisons and have remained some time in them, far from being reformed, leave the jail considerably worse than when they first passed under its gates. The improvement of our political state will also contribute to do away with, or at least to lessen, the bad effects of this cause; and the reform of our prisons, directed first of all to the total separation of prisoners, must be, according to public opinion, one of the first objects to which government ought to devote its attention, as soon as we have put into practice the principle that authority cannot be reformed by any other means than the pacific action of the laws, and that in consequence people are no longer exclusively preoccupied with the care of their own preservation.

§ 8. The chief causes of crime in the Netherlands are stated to be the want of education, drunkenness, and the desire to make a figure beyond one's means and position. In the case of young prisoners, there may be mentioned, in addition, the influence, often pernicious, of a second marriage of their parents, which not unfrequently, by embittering the position of the children of the first marriage, deprives them of the salutary influence of family-life.

§ 9. Crime in Norway, being for the most part a violation of the rights of property and assaults on the person, is traced mainly to laziness, drunkenness, bad company, neglected education, and the want of good home-influences.

§ 10. In answering this question for Russia, Count Sollohub says:

The cause of crimes in my country arises from a certain oriental fatalism, which enters profoundly into the character of the people. This fatalism, which is associated with a profound religious faith, inspires frequently a singular indifference to life and death, to the enjoyments and privations of life, sometimes even to moral good and evil. The result is a spirit of indolence, which, however, is often roused by the temptation to drunkenness and the excitements occasioned by it.

At the same time the count avers that the want of a general system of elementary education, abuses tolerated by a still defective administration, and a legislation which is not yet definitely settled, contribute in propagating lamentable disorders. He holds that, in the Russian penitentiary system, the cause of criminality must be kept in view, just as the cause of disease should not be ignored when the physician proceeds to treat his patient.

§ 11. The chief causes of crime in Sweden are the want of proper care in youth, bad company, evil examples, poverty, and the love of strong drink. An additional cause is that he who has once fallen into crime and been imprisoned for it is generally repelled and left without help in his efforts to gain an honest living. The re-admission of liberated prisoners into society is the more difficult, as by existing law every person who has been sentenced for theft, forgery, murder, &c., is further sentenced to loss of civil rights for a time (at least five years) or for life. This covers him with infamy, and consequently excludes him from all the rights and advantages pertaining to honorable men. His civil degradation is entered on his certificate of conduct.

§ 12. The question of the causes of crime is elaborately and ably treated in the report from Switzerland, a mere enumeration of which only can be given by the undersigned. These causes are said to be malign or defective education, abnormal family relations, sensualism, recklessness, drunkenness, and want of a trade or other regular business.

§ 13. The prevailing character of crime in the United States is hard to define. In the South and West crimes of violence, in the North and East crimes of fraud are common, and theft prevails very generally, though not so much as in Europe. Many of our most accomplished thieves and burglars come to us from the old country. Intemperance is a proximate cause of much the greater number of crimes here; orphanage, idleness, the want of family government, and the wretched home-life, or lack of home-life, in great cities, are leading causes of crime. A desire to live without work leads to much crime here, as well as in other countries.

§ 14. No information is furnished on this subject by the English or Irish reports.

CHAPTER XIII.

LIBERATED PRISONERS.

§ 1. The effort to procure work for liberated prisoners has, in Austria, been limited, hitherto, to this, that those who have learned a trade in prison receive a letter stating that they have done so, and those who have shown themselves particularly attentive receive a testimonial to that effect. In particular cases steps are taken on the part of the officials to procure work for those prisoners whose conduct has been exemplary and who have given proofs of firmness. The results, however, have been too isolated to afford any statistics upon the subject.

There is only one Liberated Prisoners' Aid Society, which is in Vienna. All efforts on the part of the prison directors to call into existence similar societies elsewhere have been unsuccessful. The society in Vienna limits its operation to supporting liberated prisoners till they shall have found occupation, and to aiding them with tools, clothes, &c.

§ 2. No prisoners' aid or patronage societies are found in Belgium; but the government has not lost sight of this important point. Efforts were made in 1848 to organize such associations; but, unhappily, the measures taken were not crowned with success. While waiting, the administration seeks the best means for assuring to liberated prisoners an effectual protection, so as to prevent their falling back into crime. A special credit figures even in the budget of the department of justice, permitting the administrative commissions of reformatory institutions to extend aid to their liberated inmates.

§ 3. In 1859 prisoners' aid associations were formed for each of the four great prisons of Denmark. Their action is limited to released prisoners. Each prison has thus its own society, founded by private liberality alone, which is to be considered as a charitable association; and it is thought to act best in that manner. The societies have annual general meetings, by which the administrations are elected. On the administrations there are always chosen some of the functionaries of the prisons, so that they may be put into direct relations therewith. As members of the administration, there are particularly selected citizens who carry on an extended business as manufacturers, merchants, artisans or agriculturists, and who have great influence, because they have it in their power to employ a large number of workmen. Once a month some member of each society appears in the prison to see the prisoners who are to be released the ensuing month. Their behavior is examined, and an agreement is made in regard to tendering the help that, according to circumstances, seems to be most fit. Not all prisoners are assisted, but mainly those who, on account of their diligence and good behavior, are recommended by the director. What, next to the behavior, is most taken into consideration is their age, their want, and their earlier life. The younger are especially helped by getting them into service; the older, by money; the artisan, by tools, &c. On the greater part the help is bestowed as a *gift*, but on some as a *loan*. Some are only promised help on condition that they first manifest their will to help themselves. All about, in the country, the society has its agents, to whom it confides its wards. These societies appear thus to be well organized. Every year they awaken a greater sympathy, and the number of their members increases. For ten years the state has given an annual subsidy; and the most cheering circumstance is that the municipal authorities, as well in the towns as in the country, more and more make annual

contributions, making it clear that the cause has been approved by the people. Several legacies have been left to the associations, the interest of which is to be expended in procuring clothes for released prisoners. The largest of these bequests is \$5,500.

§ 4. Up to the present time the patronage of liberated prisoners has not been generally or systematically organized in France. The Abbé Coural founded in 1842, near Montpellier, under the title of Solitude of Nazareth, a refuge designed for the liberated females of the south. The Sisters of Mary-Joseph, in imitation of this example, have founded seven other refuges near the central prisons, for women. There is only one establishment of this kind for men, the asylum of St. Léonard, at Couzon, (Rhône.) The results of the refuges devoted to women are good; those obtained at the asylum at St. Léonard are less satisfactory. Two active and successful patronage-societies, in aid of liberated Protestants of both sexes, have been for some years in existence. Since the official report was made to the congress, a central patronage society has been established in Paris, which proposes to found branches in all parts of France, as may be found practicable. The administration is earnestly engaged in seeking the means to increase the number of institutions similar to those mentioned above.

What is said above relates exclusively to adults discharged from prisons. The liberated juveniles of the department of the Seine are placed under the patronage of a society which facilitates their admission to provisional liberty and aids them in acquiring a trade. No better planned, efficient, or successful organization of the kind exists in any part of the world. It is but fair to the penitentiary administration of France to say that this last statement is not contained in their report; the responsibility for it is assumed by the undersigned.

§ 5. Germany responds as follows:

(1) In Baden, the directors of the penitentiary establishments are required to enter, for this purpose, into correspondence with the authorities of the political administration some time before the liberation of each prisoner; it is made the duty of these authorities to unite with the prisoners' aid societies and with the local authorities in providing for liberated prisoners. This measure is only of recent date, and its results have not yet shown themselves to any great extent. They cannot fail to be good.

Prisoners' aid societies exist in twenty-one out of fifty-nine districts. The results are satisfactory.

(2) To procure work for those liberated prisoners who are considered as improved, the administration in Bavaria puts itself into communication, while the prisoner is still under their care, with honest employers, with benevolent societies, with the parish vestries, or with other authorities. The prisoner receives on his dismissal, if necessary, clothes and traveling expenses from the funds of the prison. By these means prisoners are often preserved from relapse.

In every province of the country there exist liberated prisoners' aid societies; these are, however, hampered in their activity by ignorance, and the little interest which exists in the mind of the public, in many places, respecting their objects. But the Munich Society, which has existed for eleven years, has found employment for 1,182 discharged prisoners, of whom 377 have relapsed, while 805 conduct themselves well, and may be considered as reformed. The objects of these societies are to receive into a refuge those who are homeless, to try to procure them work, to give help—more especially in the shape of tools—and to watch carefully the conduct of each discharged prisoner.

(3) In Prussia, the administrative authorities of prisons use their best efforts to obtain protection and work for liberated prisoners. For this purpose they communicate with the minister and authorities of the birth-place or residence of the prisoner, and, wherever they exist, with prisoners' aid societies. Owing to the reluctance of masters and workmen to have relations with liberated prisoners, the efforts made to aid them have not been satisfactory in their results.

Aid societies exist in many towns, but they have neither a common organization nor a common center which unites them; and many more are wanted to make them bear any just proportion to the extent of country. Their number is too small and their action too feeble sufficiently to realize the objects they have in view. The aim of these societies is to give temporary shelter and work to liberated prisoners, either in asylums provided by the society or in the houses of private persons of honorable character. They seek in every possible way to maintain relations with their wards, in order to aid them with counsel or pecuniary gifts.

(4) Saxony communicates no information on this point.

(5) In Würtemberg there has been a patronage society for liberated prisoners, with branches in the different districts of the kingdom. It has 3,000 members. It seeks to aid its wards by obtaining work for them, and by supplying them with tools, raw material for manufacture, clothes, bedding, &c.

§ 6. In Italy certain religious associations possess funds that may be used in aid of liberated prisoners; an occasional patronage society exists in some of the cities. Such societies are what remain of institutions, more or less ancient, which were religiously preserved and even protected by the Italian government; but there are none of any great importance, except at Milan, Turin, and Florence. The government has sought to extend institutions of this kind; but down to the present time, such institutions are too few in number and too limited in means to justify a prediction as to whether they will take root in the social soil of Italy, and, if so, whether their rules should be preserved or modified in order that the best fruit for which they were founded may be obtained from them.

§ 7. The commissioners who prepared the report for Mexico state that as regards the federal district—the only part of the republic of which they have any positive information—committees of vigilance are being established, and to them, among others, belongs the duty of aiding discharged prisoners in finding work.

§ 8. The Netherlands government, as such, does not charge itself officially with the care of liberated convicts; but many directors of prisons take great pains to find work for them, and generally they have cause to congratulate themselves on the result of their efforts. The greater part of the directors, however, are reported as too indifferent to concern themselves much about the matter.

The Netherlands Society for the Moral Amelioration of Prisoners has for its object, not only the visiting of prisoners, but also the manifestation of an interest in their welfare after their discharge from prison. This society counts forty branches, scattered throughout the whole kingdom, and corresponding members in thirty-seven places where there are no branches. To some of the branch societies are attached committees of ladies. As regards the prisoners, a variety of methods is employed to encourage and help them. They procure situations for them at service, place them in the merchant-marine, supply them with tools, obtain for them some little industry or business, provide them with the means of emigrating, &c. The results differ, as a matter of course; but the

society accomplishes much, and often sees its efforts crowned with success.

§ 9. With a view of guarding released prisoners from relapse, efforts are made in Norway to procure work for them, to get positions for them as sailors, to aid them with tools, money, clothing, &c. At the same time, it is thought that too much assistance weakens their moral forces. There exist a few discharged prisoners' aid societies, but they lack the means to do their work as extensively and efficiently as would be desirable.

§ 10. Hitherto little has been done in Russia to aid discharged prisoners in obtaining work. The first patronage society has just been officially established in St. Petersburg.

§ 11. Prisoners' aid societies exist at present only in two provinces of Sweden. They aim at obtaining work for prisoners in the houses of steady masters; they also supply clothing, and sometimes make advances in money on the prisoner's work. Occasionally those expressing a desire have received aid to enable them to emigrate. Of late years it has been proposed to make greater efforts to give a more practical direction to the labors of these societies. They have started out on the principle that if habits of order and cleanliness are obtained by the discipline of the prison, and the time of imprisonment is properly employed in the moral education of the prisoners and in giving them skill in industrial and agricultural labor, the societies can more generally find them work immediately on their liberation. For prisoners for whom work is not at once obtained, it is proposed to establish agricultural colonies, where they may learn order in work and skill in certain branches of farming, so as thus afterward to be able more readily to earn an honest living.

§ 12. Patronage societies are organized in nearly all the cantons of Switzerland. That in the canton of St. Gall was established in 1839, thirty-four years ago. It was made by law the duty of every prisoner, who was a native of St. Gall, or had his domicile there, to place himself for three months at least under the protection of the society. Wherever patronage societies exist, they aid discharged prisoners by their counsels, watch over their conduct, shield them from evil enticements, and purchase the clothing, tools, &c., which may be needed by them. They endeavor to aid their beneficiaries by procuring work rather than by giving them assistance in money. But, in spite of all these efforts, the results do not correspond to the desires of the friends of prison reform. There is not sufficient unity in the organization of patronage. This is a great inconvenience, which the Swiss Society for Penitentiary Reform is seeking to remove, by bringing into mutual relation all those persons who, in the different cantons, occupy themselves with the patronage of liberated prisoners.

§ 13. The work of aiding liberated prisoners, and thus seeking to prevent their return to crime, is by no means as extensively or as thoroughly organized in the United States as it ought to be. Massachusetts has an official agency for this purpose, which has accomplished and is accomplishing an immense amount of good. The New York Prison Association, the Philadelphia Prison Society, the California Prison Commission, and the Maryland Prisoners' Aid Association are the four most efficient organizations of this kind in the country. There are a few minor organizations in different localities, more or less useful; but their work is, for the most part, restricted for the want of sufficient means to make it broader and more effective. It will be the work of the National Prison Association to organize such agencies in all the States where their organization may be found practicable.

§ 14. The patronage of liberated prisoners is more extensive, more thoroughly organized, more active, and more successful in England than, perhaps, in any other country. Some forty associations of this kind are found in the metropolis and the counties. They aid, annually, over 6,000 released prisoners. The assistance given differs according as it is granted to men or women. That accorded to men consists in procuring work for them and in furnishing them, while awaiting employment, board, clothing, &c. Two societies, however, have founded, each, a refuge for men. One of these deserves special mention. It has an average number of thirty-three men, occupied in making mats. It is the Industrial Home of Wakefield, in connection with the prison of that name. During a period of seven years this establishment has received 942 beneficiaries. The proceeds of their labor have sufficed to defray all expenses, and the men commonly earn a surplus of a few shillings each weekly. On the 30th of September, 1871, there was in the treasury between \$4,000 and \$5,000 of surplus earnings.

The assistance given to women is solely through the agency of refuges. It is, in fact, difficult to find immediate employment at domestic service for a woman just out of prison. She requires to be subjected to some preliminary probation. Discharged female prisoners themselves feel the necessity for this support which preserves them from fresh temptations. Hence they seek the interposition of aid societies in much larger proportions than men.

§ 15. Ireland has no patronage society for its convict-prison. The intermediate prison at Lusk, with its agent for discharged prisoners, does all that is necessary for men, and two refuges, one Catholic, the other Protestant, for women.

CHAPTER XIV.

SUGGESTIONS RELATING TO REFORMS.

The following was the closing question of the series addressed to governments, the replies to which have furnished the comprehensive and valuable information contained in the preceding chapters, viz: "Are you satisfied with the penitentiary system of your country? What defects, if any, do you find in it? What changes or modifications would you wish to see introduced?" The substance of the answers returned will be embodied in the present chapter.

§ 1. The answer of Austria is that the system of imprisonment as it exists in that country suffers from the fact that there is too great a uniformity in the punishment, and that there is not a prison for each kind of punishment. This, it is said, interferes with the effect of the various kinds of punishment, especially with those of a strict character. To remedy this it would be desirable, the report states: 1, to lessen the various kinds of punishment in number, and, if possible, to reduce them to three; 2, that every one of these punishments be characterized by differences in the dietary and treatment of the prisoner; and, 3, that every kind of punishment be undergone in prisons specially designed for it.

§ 2. Belgium replies that she is satisfied with her existing system, in so far as that reply is not applicable to establishments on the congregate plan, and that the transformation of these into cellular prisons is actively progressing.

§ 3. Under certain reserves the French report points out the following reforms and ameliorations as desirable in the penitentiary system: 1. The abolition of the punishment of imprisonment for offenses of little gravity, in place of which should be substituted, as far as possible, pecuniary penalties, the temporary privation of certain civil rights, &c. 2. The definitive choice of a system of imprisonment for prisoners awaiting examination or trial and for those sentenced to punishments of a duration not exceeding two years. 3. The adoption of a penitentiary system applicable, under different degrees of severity, to: 1, correctional convicts, sentenced to a punishment of two years and over; 2, reclusionaries; 3, persons sentenced to hard labor. 4. The organization of patronage societies, to which liberated prisoners may have recourse on their discharge from the penitentiaries.

§ 4. The German states represented in the congress give answer thus:

(1) Baden says that she is satisfied with her penitentiary system, since the cellular system, as a rule, is adopted.

(2) Bavaria replies that the system of associated imprisonment which exists in most of her prisons cannot be considered satisfactory, particularly as the greater part of them are old castles or convents, which are ill-adapted to purposes of imprisonment.

(3) The answer of Prussia is given in the words of the report, as follows:

In many respects the organization of Prussian prisons may be considered perfect. Order especially characterizes the administration. The assiduous care taken in regard to the prisoners in all respects and the efforts made to give them work suited to their capacities are beyond reproach. The discipline, severe, yet just, is excellent. The instruction and religious exhortations are efficiently and carefully given. On the other hand, our system has some grave defects which urgently demand the remedy we are earnestly striving to find. Part of the prisons require complete rebuilding; others need internal reconstruction; a general rule enforcing the separation of prisoners at night is urgently required, and their isolation, both by day and night, ought to be more extensively applied. We need the application of cellular imprisonment in all cases of preliminary detention and of short sentences. We think this system also indispensable for the objects aimed at in all penitentiary reclusion, and we consequently propose a proportional increase in the number of cells. We ought also to devise means for permitting the prisoners to work in the open air more than they do at present, and to effect this change in such a manner that the new measure may serve as a preparatory step for the prisoner's return to liberty. It is moreover very requisite to care more for the preliminary training of the inferior officers, to increase their number, and to give them facilities for passing, after a certain length of service in prisons, into other branches of the state-service. Lastly, to solve the difficulties which till now have obstructed effective prison-reform in our country, we must create a central organization which would regulate prisons of every kind and have due regard to the interest of every nature connected with prison administration.

§ 5. Norway replies in a very general way, with no definite proposition of interest to other nations, except that favoring the establishment of separate prisons for women.

§ 6. Holland says that the greatest defect in her penitentiary system is that there is no system, or, rather, that the two systems of associated and cellular imprisonment are applied without any uniform rule, and without placing them in a harmonious relation to each other. Hence there is a pretty general agreement that a reform is necessary, and that it should have mainly two objects in view: a revision of the penal laws, which would introduce a more uniform and more harmonious system of imprisonment, and a serious effort to give greater dignity to the position of the directors and employés, and to open these offices to men of a higher education. Whatever differences of opinion may exist as regards the system to be followed, (and they are great, since all the systems which divide *savans* find their partisans,) on these two points there is a very general agreement.

§ 7. Count Sollohub, replying for Russia, submitted a special and very able paper on this point, developing a complete penitentiary system, which he had drawn up and presented to the imperial government, as president of the commission on penitentiary reform for the empire. This paper, the production of a profound and, for the most part, right-thinking intellect, though long, is too valuable to be omitted. In submitting it to the congress, the count remarked that the brief view, presented by him, of the present state of the prison question in Russia sufficiently showed the urgent need of reform in his country. He said that the imperial commission, over which he has the honor to preside, had just completed the draught of a prison system, which was about to be revised by the proper authority, and he judged that it might have some interest for the eminent specialists then assembled in London. At all events, he desired the criticisms of his honorable colleagues in the congress, it being understood that the plan proposed is based chiefly on the circumstances and necessities of his native country.

The penitentiary system proposed by the imperial commission is, it will be seen, in the form of a bill or project of law, to be enacted by the supreme law-making power of the empire. It is in the words following, to wit:

I.—CLASSIFICATION OF THE PLACES OF IMPRISONMENT.

1. All the places of imprisonment in the empire are divided into: *a*, preliminary; *b*, penal.
2. The places of preliminary imprisonment are used for the incarceration of: *a*, persons awaiting examination or trial; *b*, persons convicted and awaiting the execution of their sentence; *c*, persons arrested by the police.
3. The places of penal imprisonment are used for the incarceration of persons sentenced by judgment of a court.
4. The places of preliminary imprisonment are subdivided into: *a*, police prisons; *b*, houses of justice.
5. The places of penal imprisonment are subdivided, according to the duration of the detentions, into: *a*, short duration; *b*, moderate duration; *c*, long duration.
6. The places of penal imprisonment of short duration are: *a*, jails (*les arrêts*);* *b*, houses of amendment.†
7. The places of penal detention of moderate duration are houses of correction.
8. The places of penal detention of long duration are convict-prisons, (*maisons de force*).‡
9. All prisons are divided, according to their localities, into: *a*, provincial; *b*, central.
10. The provincial prisons are: *a*, police prisons; *b*, houses of justice; *c*, jails; *d*, houses of amendment.
11. The central prisons are: *a*, houses of correction; *b*, convict-prisons.
12. The provincial prisons are considered, as regards revenue, unproductive.

* We have nothing in this country corresponding to the prisons here called *arrêts*. They seem to answer most nearly to our county jails, particularly in that function of these latter whereby they become places of punishment for persons convicted of trivial offenses. But the main function of our jails is to serve as prisons of preliminary detention. With this explanation, I translate the term *arrêts* by our word jail, as our language appears to afford no other.—E. C. W.

† This is another class of prisons for which we have no equivalent. Both the thing and its designation are wanting with us. The proper translation would be "houses of reformation," or "reformatory prisons;" but, as will be seen, the term of imprisonment in them is limited to three months and they are intended to act by *intimidation*, so that both the duration of the imprisonment and the predominant agency to be employed are against the idea of *reformation*, properly so called. The only thing I could do, therefore, was to transfer, without translating, the original word *amendment*, and leave the reader to interpret it for himself.—E. C. W.

‡ These correspond most nearly to our state-prisons and the English convict-prisons, being intended for prisoners guilty of the more heinous crimes. The expression by which they are designated, *maisons de force*, will be translated, in this version, *convict-prisons*.—E. C. W.

13. The central prisons are considered, as regards revenue, productive.
 14. Besides the prisons above mentioned, there shall be established in the empire refuges and penitentiary colonies for juvenile prisoners.

II.—ORGANIZATION OF THE PRISONS.

15. The reform and organization of the prisons of the empire shall be effected gradually, but all the kinds and gradations shall be established simultaneously in the different provinces.

16. Imprisonments made by the police take place, in the districts, near the communal administrations; in the cities, near the police-stations and their sections.

Observation.—The prisons may also serve for persons arrested by the administration.

17. Houses of justice for preliminary detention shall be established in the cities of the provinces and of the districts, and in other localities, if necessary.

18. Houses of justice shall be established, as far as possible, in connection with edifices devoted to judicial purposes.

19. Preliminary and penal prisons cannot be established in the same building.

20. Jails, (*les arrêts*), where punishment for light offenses (*contraventions*) is undergone, shall be established in all cities, and in other localities, if necessary.

21. Houses of amendment shall be established in all provincial and district cities where they are needed.

22. Houses of correction shall be established only in places where orders for the products of industrial labor are likely to be received.

23. Convict-prisons shall be established in the neighborhood of coal-beds, stone quarries, salt-pits, and other localities suited to the organization of toilsome and productive industries for long terms of imprisonment. The punishment of "hard labor" (*travaux forcés*) shall not be applied exclusively in countries outside the limits of European Russia, (Siberia.)

24. In the central prisons the establishment of hospitals is obligatory. In other prisons, hospital treatment is to be provided as far as possible.

25. Baths and, if possible, hospitals for the prisoners shall be established within the inclosure of the prisons, but separate from the main buildings.

26. The houses of justice and of amendment require two courts—one for the administration, the other for the prisoners.

27. A third court for the work-shops is required in the central prisons.

28. Stores of wood, sheds for tools and farming implements, the cellars, the stables, shall be placed outside the prison inclosure, in the court devoted to the general affairs of the establishment.

29. Near the houses of justice, the jails, and the houses of amendment there shall be arranged small gardens, in which the prisoners can take exercise.

30. Near the central prisons there shall be allotments of ground for cultivation: for houses of correction, not less than five acres per hundred prisoners; for convict prisons, not less than twenty-seven acres per hundred prisoners.

31. All the persons employed in the houses of justice, the houses of amendment, and the central prisons, except the head of the establishment and the overseer-in-chief, (male or female,) shall have their lodgings in the court devoted to the general affairs of the establishment.

32. There shall be a space of ground not less than twenty-three yards in width for a circular road around the central prisons. This principle is not obligatory for the other prisons.

III.—DISCIPLINE OF THE PRISONS.

A.—General regulations.

33. The discipline of all the prisons shall have for its base the three following principles: justice, guardianship, nationality.

34. The system of discipline of all the prisons shall have in view: 1. For prisoners awaiting trial—*a*, their complete separation, to prevent all connivance; *b*, the prevention of the association of prisoners charged with offenses of different degrees of guilt; *c*, the enjoyment of all privileges and comforts not inconsistent with the course of justice. 2. For prisoners under sentence—*a*, the just punishment of the crimes of which they have been judicially declared guilty; *b*, the exercise of a guardianship, which has in view the destiny of the convicts after their liberation.

From this last consideration arise the essential exigencies and special aims of the system: *a*, for jails, *admonition*; *b*, for houses of amendment, *intimidation*; *c*, for houses of correction, *punishment*, combined with a system of education, of industrial labor, and of preparation of the prisoners for a return to society; *d*, for convict-prisons, *chastisement*, with toilsome labor, having in view the ulterior colonization of the convicts.

35. Churches are obligatory in all central prisons. In other classes of prisons chapels only will be required. Images shall be placed in all the rooms appropriated to prisoners.

36. There shall be special regulations for each kind of imprisonment. These regulations will form a general code.

Observation.—There shall be given, in addition, by a competent authority, personal instructions to each head of a prison.

37. Every prisoner shall be placed in the kind of prison named in the sentence of the court.

38. The provincial prisons may receive into the same building the two sexes under the same administration, but the parts of the prison appropriated to each sex must be entirely separated from each other.

39. The central prisons, for each sex, must be separate and distinct establishments.

40. The system of association at night (and of beds on planks) is abolished. For the houses of justice and of amendment there shall be the system of complete separation between the prisoners; for the central prisons, the system of separation, by night, in common dormitories.*

41. In the prisons of preliminary detention, labor is not obligatory; it is obligatory in all other classes of prisons.

42. All changes in the distribution or placing of prisoners during the day shall be effected, in the penal prisons, by the ringing of a bell.

43. There shall be, in all penal prisons, modes of encouragement, consisting of privileges granted to the prisoners.

44. There shall be, in all detention-prisons, a system of disciplinary punishments. Corporal punishment shall be permitted only in convict-prisons. In all other prisons, there shall be allowed only incarceration, more or less rigorous.

45. The maximum duration of imprisonment is fixed: *a*, for jails, at three months; *b*, for houses of amendment, at one year and four months; *c*, for houses of correction, at one year to four years; *d*, for convict-prisons, from six years to life.

46. In the cellular houses of amendment, the duration of imprisonment shall be reduced by one-third.†

47. The mode of transferring prisoners will be made the object of a special regulation.

B.—Special regulations.

1. For police-imprisonments:

48. The detention-houses in the communes and police-districts have, for their end, only to provide for the safe-keeping of persons awaiting examination.

49. Every person who has given occasion to a judicial prosecution shall be kept in separate confinement, wherever it is possible.

50. Preliminary police-imprisonments shall be conformed to existing laws.

2. For imprisonments in houses of justice:

51. Wherever it is possible, conveyance to houses of justice shall take place in cellular carriages. In cases where the prisoners are taken on foot, they shall have the right to wear a hood on the head.

52. Individuals confined in houses of justice shall be placed at first in receiving-cells, from which they shall be taken, in rotation, to go through the formalities required by law, to be submitted to the inspection of the doctor, and to undergo the prescribed ablutions.

53. The prisoners have the right to keep their own clothing, unless it is worn out or too much soiled. In that case, they will be furnished with clothing by the establishment, but of different color and cut from that prescribed for convicts.

54. Photographs of prisoners shall be taken, if it is considered necessary.

55. Every article found on the prisoner, except his clothing, his shoes, and his linen, together with his baptismal cross and marriage-ring, shall be taken from him and kept in a place devoted to that purpose. A receipt shall be given to the prisoner for the money and effects placed in this repository.

56. The cell of the prisoner must be, in its dimensions, not less than fifteen square

* An apparent contradiction; but the arrangement seems to be this: The dormitories are to be common, with small apartments, or cells, arranged round their walls, by which the separation is effected.—E. C. W.

† Some members of the commission voted with the president, Count Sollohub, for a reduction of two-thirds.

archines,* and must contain at least three cubic *sagènes** of air. Special care must be given to the lighting and ventilation of the cell.

57. It is permitted to prisoners to have their beds, furniture, books, and writing-materials.

58. Prisoners who desire to work shall be encouraged therein. Three-fourths of their earnings, after deducting the cost of material, shall belong to the prisoner. The other fourth shall be deemed the revenue of the establishment, for the purchase of tools, materials, &c.

59. The prisoners shall have the legal rations of the prison and shall receive half a pound of meat per day; but they have the right to better diet, if they have the means of paying for it.

60. Prisoners have the right to smoke, but this privilege shall be withdrawn from those who use fire imprudently.

61. The prisoners shall have the right to take exercise, but their head must be covered with a hood, and they must walk five paces apart.

62. Interviews with relatives and visitors will be permitted only with the sanction of the counsel of the government, who will arrange the conditions of these interviews.

63. The chaplain of the prison is bound to visit each prisoner at least twice a week, and oftener if it is thought necessary.

64. The counsel of the prisoner shall have free admission to him at all times.

65. Persons sentenced by the court shall await the issue of their appeal, or the execution of their sentence, in the cells where they were previously confined, but they shall be deprived of all the privileges before accorded to them.

3. For jails:

66. Punishment in jails shall be undergone in virtue of the imperial decree of the 4th July, 1866.

4. For houses of amendment:

67. Sections 51, 52, and 62, relating to houses of justice, shall be applied to the houses of amendment.

68. The prisoners shall wear the prescribed dress.

69. The prisoners can neither smoke nor make use of their money.

70. The prisoners will be required to work eight hours a day at task-work. Two-thirds of their earnings will belong to the establishment; the remaining third shall be placed to the credit of the prisoner, but he will not be permitted to use it till after his liberation.

71. All prisoners shall have the same rations.

72. The dimensions of the cells shall not exceed fifteen square *archines*.

73. Interviews with persons from outside shall not exceed one per month. The visits of the chaplain, the doctor, the officers, and of members of philanthropic societies, are not subject to this regulation.

74. Prisoners shall be permitted to work over and above their task and beyond the hours prescribed. The amount of this additional work shall be placed to their credit.

75. Prisoners who shall have finished their terms shall be immediately liberated.

5. For houses of correction:

76. The term of imprisonment is from one year (minimum) to four years, (maximum,) without remission.

77. The prisoner confined in a house of correction shall undergo a preliminary cellular imprisonment, whose duration shall be fixed by the court. If this duration is not mentioned in the sentence, the prisoner shall be isolated only during the legal term. In both cases the administration has the right to reduce the period of complete isolation to the minimum fixed by the law.†

78. The system for houses of correction, in its rigor, shall be that of work in association by day and of separation by night.

79. Every person confined in a house of correction is bound to work ten hours a day without receiving any part of his earnings. This labor is employed in domestic service, laundry-work, and tillage. The product of this labor is applied to the support of the prison.

80. The duration of this labor may be reduced to four hours a day, if the prisoner expresses a desire to occupy himself during the other six hours in mechanical labors.

* An *archine* is a Russian measure of about two-thirds of a yard, and a *sagene* of about two yards and one-third.—E. C. W.

† This paragraph was strongly contested. Nevertheless, the opinion that a period of preliminary isolation is unnecessary did not obtain a majority of votes.

which require no special knowledge. This is called "mechanical work," (*travail mécanique*.) A third of his earnings when thus engaged goes to the workman; the other two-thirds are to the profit of the prison.

81. Those who do not desire to work ten hours a day at "rough" work, nor six hours at "mechanical" work, may learn any trade they prefer, which requires an effort of will and a sustained study. This is called "professional work," (*travail professionnel*.) Those who are learning a trade receive no benefit from their labor, and, in addition to eight hours given daily to their apprenticeship, must spend two hours on "rough" work.

82. As soon as a prisoner becomes master of a trade, he shall receive two-thirds of all he earns; the remaining third is applied to the profit of the prison.

83. Any prisoner who already knows a trade on his arrival at the house of correction shall receive one-half the earnings of his labor; the other half shall go to the profit of the establishment.

84. The foremen and apprentices of each trade constitute a distinct section.

85. The persons who supply constant orders to the sections are denominated curators (*curateurs*) of the sections.

Observation.—The director of the prison can have work done, in exceptional cases, conformably to the regulations mentioned above.

86. The rights and duties of the guardians (*tuteurs*) of the sections shall be regulated by law.

87. The curators of the sections shall settle weekly their accounts with the director of the prison in cash, and the sums due to the prisoners who have become master-workmen, for their labor, shall be inclosed in the portfolios of each section separately. These portfolios shall be kept in a special case, which is itself locked up in the strong box of the government.

88. The key of the case which contains the money of the prisoners shall be kept by the cashier, chosen by the sections. It shall be the duty of the cashier to be present at the weekly settlements between the curators of the sections and the sections themselves.

89. No prisoner may keep his own money, nor exact, under any pretext, what has been set to his account under the name of profit. He receives only a little book, in which is kept the account of the product of his labor for each week.

90. As an exceptional encouragement to industry and good conduct, one-fourth of their gains may be allowed to the sections for the purchase, through the agency of an inspector, of tea and any other authorized article.

91. Each section will choose a chief, who shall be responsible for the order of the section.

92. Each section shall be responsible for the escape of its foreman, and, in case of such escape, the said section shall forfeit its profits.

93. The monitor, the inspector of the prison, and the chief shall be responsible for the order of each section during the hours of work.

94. The movements of the prisoners will take place by couples, in military order, at the word of command and at the hours indicated.

95. A school shall be established in every house of correction.

96. The time spent in school shall be counted as time spent at "rough work," (*travail grossier*.)

97. On Sundays and holidays, after mass, the chaplain and the professors attached to the prison shall hold conferences with the prisoners; these conferences shall relate to religion, sacred history, geography, and scientific subjects.

98. During the night the prisoners shall be confined in separate cells, from which no one can go out without leave from the director of the prison. Silence is obligatory at night. The inspector is charged with the duty of supervision. The dormitories must be kept lighted.

99. Interviews with relatives and strangers shall be permitted at the times indicated by the regulations.

100. When the term of the imprisonment ends, there shall be given, from the cash-box, to those liberated, the money earned by them, after which no interview shall be permitted them, under any pretext, with their former comrades.

6. For convict-prisons:

101. Convict-prisons shall be established for the imprisonment of all persons convicted of felonies.

102. The convict, who shall have merited, by his industry and good conduct, an abbreviation of his imprisonment, may obtain it on the order of the administration of the prison, but not before he shall have undergone two-thirds of his punishment.

103. The prisoners who have not deserved an abbreviation of their sentences shall undergo in the convict-prison the entire punishment to which they shall have been sentenced.

104. Those prisoners who serve out their whole time are called *convicts*; those who have merited a shortening of their punishment receive the designation of *improved*.

105. In order to a transfer from the class of "convicts" to that of the "improved,"

the prisoner, in addition to good conduct, must have earned a sum determined by the regulation.

106. In case of ill-conduct and indolence, the "improved" prisoner is again placed in the class of "convicts."

107. The prisoner, on his admission to the convict-prison, shall be isolated from fifteen days to a month, according to the determination of the administration.

108. The families of prisoners are not admitted into the convict-prisons.

109. The convict-prisons are adapted to hard labor.

110. The work is subdivided into "hard labor" and "prison-work."

111. The "hard labor" is performed by the convicts in chains, which must be made according to the legal model; the "prison-work" is done without chains.

Observation.—The chains may be removed, even during the execution of "hard labor," by permission of the director, in testimony of his confidence. The chains shall be re-imposed on those who show themselves unworthy of this indulgence.

112. The convict-prisons should be established in localities which offer guarantees for hard labor, such labor constituting the punishment of the convicts. These guarantees are always necessary, and should be independent of accidents.

113. The convict-prisons shall be established only in localities affording ready communication, or offering facilities for the sale of the products of prison labor on the spot.

114. The industries for which the convict-prison is adapted may belong to the government, or to a company or private person, if the latter can offer the requisite guarantees.

115. The administration of the prison shall not interfere with the industries.

116. The convicts form only the motive-power of the industries.

Observation.—Payment of the laborers shall be made at the times fixed by the contract and in cash.

117. The places where the labor is performed shall not be more than $3\frac{1}{2}$ miles distant from the prison.

118. No convict can remain during the night outside of the prison inclosure.

119. The duration of hard labor shall be fixed at twelve hours per day in summer and ten in winter.

120. The administration of the prison reserves a certain number of prisoners to be employed, in rotation, in farm-labor, trades, and the domestic service of the prison, conformably to a special regulation.

121. Convict-labor may be of two categories: 1, obligatory, for a fixed number of hours per day; 2, voluntary.

122. The product of obligatory labor belongs to the establishment.

123. The product of voluntary labor forms a personal income, which is paid to the prisoner on his liberation.

124. The prisoners may not engage in voluntary labor till they have finished their daily task of "hard labor" or "prison-labor."

125. The director of the prison, in conjunction with the directors of the industries, shall determine the tasks to be performed by the convicts.

126. The tasks allotted shall be performed by order of the administration.

127. The administration of the prison must see that the prisoners do the full quantity of work assigned.

128. The prisoner may engage in voluntary labor on account of the director of the industries, or at some mechanical occupation, as he shall elect.

129. Prisoners under short sentences shall receive higher pay for voluntary labor than those sentenced to long terms.

130. During the hours of labor, the prisoners shall be superintended by the inspectors, and by the chiefs of sections, chosen by themselves. The work is to be performed under the direction of persons charged with that duty by the directors of the industries.

131. According to the nature of the work, the convicts may separate into sections, under pledge of abstaining from all disorder.

132. The regulations for sections in houses of correction may be adapted to convict-prisoners.

133. One-fourth of the personal earnings of the convicts may be used in aiding their families.

134. Between imprisonment in convict-prisons and the definitive establishment of the liberated prisoners in a country named by the government, the convicts will pass into a temporary establishment under the form of an agricultural penitentiary colony, where they may be prepared for their future abode.

135. The penitentiary colonies shall be established in districts selected and set apart to be definitively peopled by liberated convicts.

136. Criminals who have passed into the class of the "improved" shall be transferred to the penitentiary colony of the government, if they have earned the sum necessary to colonization. Those who have not earned the requisite sum must remain in prison till they have, without, however, passing the term fixed by their sentence.

137. The convicts sent into the penitentiary colonies of the government shall remain there till the date indicated by the sentence. Nevertheless, the term of the sentence may be reduced by the authority of the colony. Criminals who have undergone their entire sentence in the convict-prison must still pass one year in the colony of the government.

138. Labor is obligatory in the penitentiary colonies. It must be performed according to the orders and under the direction of the authorities of the colony.

139. Any person discharged from the penitentiary colony may choose, according to his liking, the place of his definitive abode, but not without the limits or the frontier of the same country.

140. Prisoners sent to the colonies may be followed by their families.

141. The laws and regulations for the colonies shall be fixed by special decree.

The principles relating to finance and to the mode of administration proposed by this *projet*, being based on local considerations, cannot, as a matter of course, be set forth in the present writing.

§ 8. The Swiss report limits itself to a short *résumé* of the reforms thought to be needed, as follows:

1. The unification of the penal code, based on the principle of the moral reformation of prisoners.

2. The reform of prisons for persons awaiting trial.

3. The increase of the number of reformatories for juvenile delinquents and vicious boys, and also the reform of work-houses and houses of correction for vagrants and idlers.

4. The erection of penitentiaries in cantons which have only the old-fashioned prisons, which are incapable of proper transformations. Two or more cantons, it is thought, might come to an agreement to establish a penitentiary in common, or they might make arrangements with a canton which already has one, or found other establishments to be used as intermediate prisons, agreeably to the progressive Crofton prison system.

5. The special education of prison officers and employés.

6. The reform of the disciplinary and educational *régime* of the penitentiaries, with a view to the moral regeneration of the prisoners.

7. The direction and supervision, not only of the administration of all the prisons, but also of preventive institutions, (such as public assistance, orphan-houses, agricultural colonies, refuges, patronage societies, &c.,) in the hands of special officers of the government.

8. The united action of the state and voluntary philanthropic societies and societies of public utility.

9. Finally, the perfecting of all institutions whose aim is the prevention of crime, whether in the domain of education, social condition, &c., or that of police and of justice.

§ 9. The tendency of thought in the United States on the question of prison reform is toward the Crofton system, which, in proportion as it is understood, is, year by year, gaining friends and adherents. No State has yet introduced it fully, or even its main features; but it can hardly be many years before this will be done. No doubt some injustice has been done in the United States to the cellular system, but the introduction of the Crofton plan may permit us to use the more desirable features of that system. The great evil in our minor prisons and in many of those of the higher grade is that there is no system at all, but a mixture of routine and caprice in the prison administration, from which good results can come only by hazard or by miracle. Particularly is this true in regard to female prisons, and in the whole United States there is scarcely a single good woman's prison. Considering the number and excellence of our reformatories for girls, this is the more astonishing. Efforts are making in several States to establish special prisons for women, which will no doubt prove successful in the end; and, in some, the day for this reform hastens.

CHAPTER XV.

JUVENILE REFORMATORIES.

Most of the sets of questions sent out did not, through a mischance in the office where they were printed, contain any interrogatory relating to juvenile reformatories. This fact will account for the small number of countries which furnished the congress with information on this most important branch of the work looking to the prevention of crime.

§ 1. In Denmark there are three educational establishments for neglected and misguided boys, with an aggregate of about one hundred and sixty inmates. Besides these, there is a society which undertakes to have children placed in families. The latter has worked with great success.

§ 2. Saxony has had, for above a generation, two reformatories for the education and reformation of children of both sexes, besides a house of correction for young persons aged from sixteen to twenty years.

The industrial occupation in these houses is agriculture, but mechanical occupation for the wants of the reformatory itself is not excluded. The admission of children takes place mostly at the request of their relations, of societies, or of police authorities, who are asked to contribute a small sum of money. Children up to twelve years, and young persons up to eighteen years of age, are placed under this reformatory treatment. According to age, school-instruction, occupation in the field and garden, and domestic work are the means of education. At the proper time, those promoted for good conduct are first sent into agricultural or domestic service, or apprenticed to tradesmen, under proper supervision, by the authorities of the reformatory. Conditional liberation must, as a rule, precede complete freedom. Well-disposed inmates of the reformatories, of the age of less than twelve years, are sent to board in carefully-chosen families, the reformatory paying for the board. Even these have to undergo a period of conditional liberation before attaining full freedom. The term of probation for children is at least two years; that of young people, one year. The results obtained in these reformatories, since 1856, have shown that such as were liberated after a probationary period, and who on account of relapse were sent again into the penitentiary, amounted to only 7 per cent. Reformatories and houses of safety, (asylums,) established and supported by societies or by associations, endeavor to reform neglected children by giving them domestic discipline and separate or public schooling. They mostly keep the children till they are fourteen years of age. Unmanageable children are sent for further education to the above-mentioned state reformatories. The number admitted into the state reformatories amounted, in the year 1871, to three hundred and forty-five children and to thirty-one young persons. The number of inmates in asylums, &c., during the year 1871, is estimated to be about two hundred.

§ 3. The establishments devoted to the correctional education of juvenile delinquents in France receive minors of sixteen years and under, of both sexes. They are divided, for young male prisoners, into penitentiary colonies and correctional colonies. In the first are placed: 1, children acquitted as having acted without knowledge, but who are not sent back to their parents; 2, young prisoners sentenced to an imprisonment of more than six months and not exceeding two years. These establishments are public or private: public when they have been founded by the state, and the state names and pays the directors and employés; and private when

they are founded and directed by private persons, with the authorization of the state. The correctional colonies receive: 1, young prisoners sentenced to an imprisonment of more than two years; 2, young prisoners from the penitentiary colonies who have been declared insubordinate. The correctional colonies are all public establishments.

A similar classification has been established for young female prisoners. They are received either in a correctional ward directed by the state, or into penitentiary houses connected with religious establishments. Of penitentiary and correctional colonies for boys, the number is thirty-two, three being public colonies, four correctional wards, and twenty-five private colonies. Of establishments devoted to young female prisoners, there are twenty, one of which is directed by the state; the rest are private.

§ 4. The number of reformatories in Italy is thirty-three, of which twenty-two are for boys and nine for girls. They are rather of an educative than punitive nature. They are entirely private in their character, having been instituted either by individual benevolence or by charitable associations. Government makes use of them for those juveniles who fall under the censure of police-law (*pubblica sicurezza*) for idleness or vagrancy; also, for the detention of those who are placed in them for correction by paternal authority. Of these establishments, twenty-five are industrial and six agricultural. Their discipline not being as severe as that in the houses of custody, government makes use of them also as a reward, gathering into them those minors who, having been overtaken by penal law, have shown an exemplary behavior.

The average number of juveniles sheltered in the reformatories in 1870 was 2,268, of whom 1,895 were boys and 373 girls. The total number on the 31st December, of the same year, was 2,465, of whom 2,066 were boys and 399 girls, thus classified: For idleness and vagrancy, boys, 1,931; girls, 399. Paternal discipline, boys, 135; girl, 0. Parents are under no obligation to provide for the maintenance of a child who is confined in a reformatory for idleness or vagrancy; but when a father places him in one of these establishments for correction, the state charges him with 36 cents per day. He is, however, exonerated in part or entirely from his charge, if he can prove himself indigent.

§ 5. The number of reformatory institutions in Switzerland destined to the treatment of juvenile delinquents is seventy, besides certain establishments founded by Messrs. Richter-Linder, Zellweger, and others, the number of which is not stated. Only four of these have been founded by the state; all the rest by charitable citizens, by societies of public utility, or by religious and philanthropic associations. The average number of inmates in these establishments in 1870 was 2,573, of whom 1,472 were boys and 1,101 girls.

§ 6. The first American reformatory, and still the largest one, was the New York House of Refuge, opened in 1825. It grew out of the efforts made by Edward Livingston and other enlightened philanthropists, to train the young in cities to a life of honest industry. In 1826, a similar reformatory was opened in Boston; and in 1828, another in Philadelphia. All these establishments received boys under sentence, and were supported, in whole or in part, by grants from the public revenue. They were not managed by the State directly, however, nor did they become a component part of the penal system of the State where they existed. The first step in this direction was taken by Massachusetts, in 1847, when the State Reform School at Westborough was established by law. Since 1847—that is, in the last twenty-five years—the policy thus initiated has been carried far forward, and is now adopted in more

than half the States of the Union. Reformatories, either wholly dependent on the States or materially aided by them, exist now in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Ohio, District of Columbia, Iowa, Illinois, Indiana, Minnesota, Michigan, Wisconsin, and California, while other semi-public reformatories, under municipal or private management, are found in these States, and in Missouri, Kentucky, Louisiana, &c., that is, in States containing an aggregate of at least 25,000,000 people. The number of large reformatories in these States must exceed forty, while the smaller establishments are still more numerous. The average number of reformatory pupils, in 1871, cannot have been less than 12,000, of whom more than 1,000 were girls; nor does this include the strictly educational or preventive establishments, like the State Primary School for poor children, at Monson, Massachusetts, the Boston Farm School, and many other such schools, in which it is probable there are as many more children, (say 12,000,) in all parts of the country.

The general results of these reformatory and preventive schools are good, as has been intimated. Of the estimated 12,000 in reformatories, strictly so termed, at least 60 per cent. will probably be trained into good citizens. Some would claim more than this, say 75 or 80 per cent., but there are no statistics that quite bear out this claim. Perhaps the percentage of worthy citizens trained up among the whole 24,000 in preventive and reformatory schools would be as high as 75.

In some of the States, parents *may* be held responsible for the support of their children in reformatories, at least in part, but this provision of law is seldom enforced. A large majority of the children are either orphans, abandoned children, or of such poor parents that little or nothing can be collected from them. In some of the private Catholic reformatories, it is understood that the payment of board by parents and kindred is strictly enforced, so far as practicable. There is, however, far less desire to throw children on the public for support, in this manner, in America than in England or France.

§ 7. An extended and very satisfactory paper on the reformatory system of Great Britain was furnished by Rev. Sydney Turner, inspector of reformatory and industrial schools. The substance of this paper, slightly modified, is given below.

The reformatory system of Great Britain was not created by the laws which now regulate its operation, but was itself the occasion and source of those laws. The condition of the younger classes of criminals engaged the attention of many persons interested in the social improvement of the community for many years before any changes were effected in the laws relating to them. It was not until the efforts of private zeal and benevolence had shown, by actual experiment, that reformatory schools could be established and worked successfully, that the legislature was induced to pass the acts which gave such schools their present recognized status, sanctioned their being largely supported by the government, and allowed magistrates to send children for detention in them.

About a century ago a charitable association, called the Philanthropic Society, founded a school for the reform of juvenile delinquents and for the protection and training of the destitute children of convicts, in the neighborhood of London. This was followed at a later period by two or three somewhat similar institutions in London and elsewhere, of which one, a small school at Stretton-on-Dunsmore, in Warwickshire, was remarkable as the first at which it was attempted to ingraft farm and out-door labor into the industrial training of the inmates.

In 1838, an act was passed for the establishment of a separate prison

for offenders under the age of sixteen, at Parkhurst, in the Isle of Wight. Land was attached to this for cultivation by the inmates, and the discipline was intended to be of a specially educational and reformatory character. By a clause in this act, the Queen was empowered to grant pardons to such young offenders as might be desirous of an opportunity of reformation, *on condition* of their entering some benevolent institution of the reformatory class, remaining in it, and being subject to its regulations till duly discharged therefrom. Under this clause a considerable number of young offenders under sentence of transportation or imprisonment were received into such reformatory institutions as then existed.

In 1847, the attention of the managers of the Philanthropic Society was drawn to the remarkable effort of Monsieur Demetz and others in France, for the establishment of an agricultural reformatory, without walls or sentries, for French juvenile delinquents, at Mettray, near Tours. Being then the superintendent or director of the Philanthropic Institution, Mr. Turner visited Mettray, reported on its arrangements and system of management, and induced the directors and supporters of the society to attempt a similar experiment in England. The Philanthropic Farm School at Redhill, Surrey, which Mr. Turner thus established and organized, and which he directed until appointed, in 1857, to the office of inspector of reformatories, was the fruit of this movement. It was followed by smaller schools on similar principles of domestic management—absence of walls and warders and the use of out-door employment—founded by Mr. Barwick Baker, at Hardwicke, in Gloucestershire; Mr. Adderley and Mr. Joseph Sturge, near Birmingham; Mr. Compton, in Hampshire; and Miss Carpenter, at Bristol.

The additional impulse thus given to the public interest in the question “how juvenile delinquency should be dealt with” led to the assembling of a conference at Birmingham of those most interested in the subject in 1853, and the results of this were the reformatory schools act for Great Britain and the industrial schools act for Scotland of 1854.

Under the first of these, which was brought in by Mr. (now the Right Honorable Sir Charles) Adderley, the secretary of state was empowered to license reformatory schools approved by him and to make an allowance for the maintenance of the young offenders committed for detention in them. Powers were given to courts of assize and quarter sessions, and to two magistrates acting in petty sessions, or to any stipendiary magistrate, acting alone, to commit young offenders, under sixteen years of age, to such schools for any term of detention, not less than two nor more than five years. The managers of the schools were invested with the necessary powers of control, and the inspection and general supervision of the schools by the secretary of the home department were provided for.

Under the second act, introduced by the late Mr. Dunlop, destitute and vagrant children, under fourteen years old, in Scotland, were similarly provided for in industrial and ragged schools. Such schools were partly under the supervision of the committee of education of the privy council and received what government aid they had from the education-grant.

In the same year, 1854, a special act was obtained by the magistrates of the county of Middlesex, enabling them to erect an industrial school for that county, (including the greater part of London,) to which young offenders under fourteen years of age might be committed for three years’ detention. The school erected under this act has since been certified under the general act of 1866.

A most valuable provision in both the acts allows of the inmates of the schools being placed out on probation before the expiration of their sentence of detention under a license from the managers of the school, liable to be revoked for misconduct.

The prison authorities of counties and boroughs are empowered to contribute to the schools by grants from the county or borough rates. Such grants in 1870 exceeded £40,000. The schools are in general more or less aided also by voluntary contributions.

The results of both the reformatory and the industrial schools have been very encouraging. In many schools of either class 80 per cent. and upward of the inmates have turned out well after their discharge, and the general average for all has reached nearly 70. These results are taken from the returns which the managers of each school have to make for the three years succeeding each inmate's discharge of his or her character and circumstances. They would certainly be still more favorable if there were more effectual powers in the acts for restraining the after-interference of the child's friends and relatives.

The results of the operations of the reformatory and industrial schools must not, however, be judged of only by the proportion of those received into them who turn out afterward honest and industrious, reformed from the criminal habits or weaned from the vagrant disorderly dispositions with which they were growing up to be dangerous in themselves and instruments for corrupting others.

The results are seen still more decisively in the diminution of the numbers of the younger classes of criminals and the lighter character of the crimes with which our juvenile offenders are now more commonly convicted.

In the year 1856, when the reformatory school system began to be in more active operation, the number of juvenile offenders (*i. e.*, boys and girls under sixteen years old) committed to prison (for the twelve months ended September 29) was 13,981; in 1858, when the system had spread and taken root, the number sank to 7,622; and in 1870, in spite of the very large increase of our population, and especially of the population of our larger towns, from which juvenile crime draws its most numerous recruits, the number of young offenders committed was but 9,998, the number of adult commitments having advanced from 99,755, in 1856, to 147,225, in 1870—an increase of above 50 per cent.

There is no doubt that the reformatory school system, laying hold on and placing under long corrective discipline and training the boys and girls who had become familiar with crime and adepts in its practice, not only in a majority of cases reformed the individual, but broke up those *schools* of crime and vice which were becoming so formidable. The change in the type or character of the young offenders themselves, who are laid hold of by the system, is as remarkable as the falling off in their numbers. The clever, experienced pickpocket, with his five or six satellites or apprentices, convicted, perhaps, six or seven times, and laughing at the offers of repentance and the opportunities of honest life offered to him, has disappeared. The inmates of the reformatories are now chiefly untrained or ill-trained children, with little criminal science, and generally much more dull and indolent than sharp or active, the products of neglected education and loose home discipline rather than of criminal training or of special criminal disposition.

The results of the industrial schools so far tend in the same direction, the extinction, that is, of the vagabond and half-thievish class they were originally designed to deal with, and the substitution in its stead of merely poor and neglected children, a large proportion of whom might

be effectually cared for by a good system of day-feeding schools—schools in which they might be kept throughout the day, so as to be taken out of the streets, and the oversight and training supplied which the circumstances and employments of their parents prevent them from receiving at home.

The whole number of young offenders committed to reformatory schools since the passing of the first reformatory schools act in 1854 amounted at the end of 1870 to 21,991 in Great Britain, and, of children sent to industrial schools, to 14,451.

The reformatory schools act was amended by successive statutes in 1855 and 1856, and an industrial schools act was passed for England in 1857 and amended and enlarged in 1861. By this last act industrial schools for both England and Scotland were placed under the home office, and an allowance for the maintenance of the inmates from the treasury, similar to that given to reformatory schools, provided for. In 1866 the reformatory and industrial schools acts, now in force, were passed, and the system now in operation finally sanctioned and defined, similar but separate statutes being enacted for Ireland in 1858 and 1868.

Under these acts, the number of reformatory schools in Great Britain had increased by December 31, 1870, to 64, containing 5,433 actual inmates, and that of industrial schools to 91, containing 8,280 inmates. Adding to those the numbers who were out on license or absent by desertion, &c., the total number of young offenders under sentence of detention in reformatories was 6,562, and of children sent to industrial schools was 8,788.

The distinction between reformatory and industrial schools is that the first are more directly for correction and the second for prevention. No boy or girl can be committed to a reformatory school unless convicted of some positive offense, punishable by imprisonment or penal servitude, and sent in the first instance for not less than ten days to jail. They must be under sixteen years of age and above ten years, unless previously convicted or sentenced at a superior court.

On the other hand, the industrial school is for destitute and vagrant children, found begging or wandering, without home or visible means of subsistence or proper guardianship. Such children must be under fourteen years old, and they are sent direct to the school, and do not pass through the jail. Children uncontrollable by their parents can be sent to them on their parents' application, but for such children the treasury allowance is limited to two shillings per week. Children under twelve years old, who are guilty of any petty offense, can be also sent to them, instead of being committed to prison and a reformatory, at the magistrate's discretion.

The allowance from the treasury for inmates of reformatories is six shillings per week; for inmates of industrial schools above ten years old, five shillings; under ten years, three shillings. For the year 1870 the total amount of the treasury payments was £177,384, the total expenditure of the schools being £311,794.

The fundamental principles on which the reformatory system is based are thus stated by Mr. Turner:

1. *The union of private and benevolent agency with government supervision and support.*

All the reformatory schools, and, with two exceptions, all the industrial schools now in operation, have been established and were at first materially supported by voluntary contributions. Many of them still derive a portion of their income from private sources, and all are man-

aged by committees or individuals appointed by the subscribers and contributors by whom they were founded.

The government interferes as little as possible with the ordinary superintendence, prescribing certain regulations as to the lodging, clothing, and feeding of the inmates of the schools, and as to the instruction they receive and the discipline they are subjected to; but leaving all the details of the management, the appointment of the officers, the admission of inmates, the expenditure, &c., to the committee. The state may be said to contract on certain terms with the several institutions for the work which it wants done, and so long as the work is fairly performed it exercises no further interference.

Important advantages accrue from this arrangement. A far greater degree of freedom and elasticity is secured to the working of the system; much of the merely mechanical routine which is inseparable from government establishments is dispensed with; the schools are more thoroughly adapted to the different localities they are planted in; a greater variety of moral and social influences is brought to bear upon their inmates; religious interest and zeal, without which little impression can be hoped for, are enlisted; and *economy* in the *expenditure* and *efficiency* in the *industrial training* of the schools are more thoroughly insured. Two advantages, not otherwise attainable, are especially secured: the one, the freedom of the religious teaching of the inmates; the other, their disposal in the world when discharged from the schools.

If the state founded and administered the schools, what is called the religious difficulty would be met with at the very outset, and each differing section of the religious community would be struggling for the assertion of its own peculiar views and practices, or protesting against those of others. But all this is avoided by the employment of the voluntary system under government supervision and through government aid.

Reformatory or industrial schools may be established in connection with any of our different religious bodies, and, in point of fact, we have schools founded and managed by Presbyterians, Roman Catholics, and members of the Society of Friends. But the law secures the religious rights and liberties of the children by enacting that, if the managers of any school receive a child of a different religious denomination from that of the school, they shall allow a minister of the child's denomination to attend and instruct it, and the rules, which are sanctioned by the secretary of state, prescribe that such a child shall not be required to learn the catechism or to be instructed in the doctrines of any other persuasion than its own. The same rules provide generally that the children in the school shall receive daily religious instruction agreeably to the denomination of the school, and shall have regular opportunities of worship on the Sunday.

The other advantage following the mingling of public and private agency in the reformatory system is the better and easier disposal of the inmates on their discharge. If the schools were administered by the state, it is believed that they must inevitably take more or less of the form and complexion of prisons, and the boys and girls discharged from them would be looked on with the same sort of distrust and suspicion that attach to discharged convicts.

2. *A second essential principle of the English reformatory system is the use of moral in preference to physical discipline.*

The institutions are organized and carried on essentially as *schools*, not houses of confinement or correction, the greatest degree of personal liberty and freedom of action being allowed that is compatible with real personal supervision and the exaction of prompt and strict

obedience. Most of the reformatories are founded on the plan of farm-schools, with agricultural labor as the chief employment. There are no walls, no warders, no sentries. The men who have charge of the working parties usually work with the boys, guiding and instructing them in their labor, while they overlook them and report on them as to their conduct. The boys are taught to hold themselves responsible, and to regulate their own conduct as far as possible by a system of rewards (or marks) for labor and improvement, and fines for misconduct and idleness, which they are fully acquainted with, and by acting on which they can increase the comforts of their position, avoid punishment, and effectively advance their final liberation. Every inmate of a reformatory or industrial school is allowed free communication with his relatives, and, if they are of tolerably good character, is allowed from time to time to visit them. The cases in which this privilege has been abused and advantage taken of the leave to abscond from the school have been and are very rare indeed.

3. *It is an essential characteristic of the reformatory system that the schools have a thoroughly religious character.*

There are none of the class called *secular*. Religious teaching is an essential feature of the instruction. The superintendents have hitherto been generally personally religious agents, capable of taking, and accustomed to take, an active part in the scriptural instruction and daily worship. In the majority of the schools, the Bible is the recognized source and chief instrument of the religious teaching, the catechism not being required.

4. *Great stress is laid on the industrial training.*

In the reformatory schools more especially, regular daily labor in the field or workshop, or for girls in the laundry, the house, or the needle-room, is insisted on; the working-time being generally from six to eight hours per day. The employments of the inmates in industrial schools are necessarily less laborious, the children being usually much younger, but the same principle is kept in view, that, as the evil to be cured has been always more or less the result of idleness and license, the remedy must especially prescribe and provide for labor and exertion, and the self-restraint which these require.

5. *The importance of supervision and occasional assistance after the inmates have left the schools, and while they are making good their footing in the world, is fully recognized.*

They are, as a rule, carefully kept in view and reported on, and, where necessary, aid afforded them. The differences which the annual reports and returns show in the success with which the operations of the schools have been conducted may generally be traced, more or less, to the different degree in which this after-supervision has been maintained.

6. *It is a fundamental principle of the system that the responsibility of the child's parents to provide for its maintenance and training should be enforced.*

This is a feature peculiar to the system as carried out in Great Britain, and has, undoubtedly, materially secured it from becoming a source of injury to the community at large.

The parents of each child committed to a reformatory or industrial school (if it has any alive) are summoned before a magistrate, their circumstances inquired into, and a payment toward the child's maintenance enforced, proportioned to their means in every possible case. The acts allow of this payment being assessed as high as five shillings per week, but, as a rule, the contributions are rarely higher than from one to three shillings. In a large number of cases, especially as regards the

children in industrial schools, the parents are too poor to pay; many are widows, themselves almost wholly destitute, and such are, of course, excused. * Many of the children are also orphans. But a very considerable proportion of parents are brought under contribution, and the amounts thus obtained have steadily increased, and now reach nearly £10,000 a year. The enforcing of these contributions is a part of the business of the inspector, who has a staff of assistants appointed for the purpose. It is chiefly carried out through the police authorities of the district in which the parents reside, by whom the payments are received and transmitted to the inspector, to be paid over to the treasury.

The justice and necessity of this part of the system are evident. No parent has a right to escape his share of the penalties of his child's misconduct, too often the fruit of his own neglect or dissolute conduct; and but for some such check, the temptation to the parent of shifting the burden of his child's support and education on the public would increase the number of candidates for reformatory training faster than the means of providing it could be supplied. The disease would be spread by the very means employed to remedy it, and the charge on the treasury, that is, eventually on all classes of tax-payers, would become insupportable. It is held in England that no system of reformatory training can be adopted with justice or safety to the community at large in which this element is omitted.

CHAPTER XVI.

STATE OF PRISONS IN SUCH OF THE BRITISH POSSESSIONS AS WERE REPRESENTED IN THE CONGRESS.

Reports on prison discipline as it now exists in India, Ceylon, Victoria, and Jamaica were submitted to the congress by delegates present from those countries. They were, however, not framed on the same plan as the reports whose substance has been given in the preceding chapters, and the information contained in them could not, therefore, be embodied with that furnished by said reports. A separate chapter is, consequently, devoted to a *résumé* of their contents.

§ 1. *India*.—Little special legislation has been given in India to prisons and prison systems. Prison regulations have been made, for the most part, without any direct sanction of law. Of the few prison acts which have been passed, none lays down any broad principles of prison discipline. One of them, however, that of 1834, contains some important provisions: it abolishes corporal punishment, substitutes fines in certain cases for labor, and empowers the government to introduce by degrees a reformatory prison discipline.

Nearly every presidency and province of India has its own special jail code. That of Bengal provides for a system of rewards to be given to well-conducted prisoners. There has also been established, for all India, a system of remission of sentence in reward of good conduct.

In the whole of India there was, in round numbers, in 1870, a daily average of 64,600 prisoners, including the life-convicts at Port Blair. There were, in the same year, two hundred and twenty-eight jails and an indefinite number of lock-ups. Of these prisons two are entirely cellular; the remainder are built on every conceivable plan, a large number of them being miserable mud-structures, which are constantly

washed away by heavy rains. In most of them male and female prisoners are separated at night. All work is in association, with the exception of cases of disciplinary punishment. There are sixteen central jails, intended for prisoners sentenced to an imprisonment of more than a year, but this intention is not rigidly observed. There are no reformatories, and but two special prisons for women. Until recently there were no female warders, and even now they are not found in all the jails. Prison officers, as a rule, are incompetent, corrupt, and underpaid, and no systematic effort is made to remedy this state of things. The annual cost of prisoners *per capita* is about \$30. Economy is practised at the expense of efficiency. Greater attention is paid to the diminution of expenditure than to the carrying out of any sound and sensible system of prison discipline.

There is little cell-accommodation—scarcely enough for the punishment of breaches of prison regulations—nor is there any system of classifying the prisoners of any practical value. No general measures of reform are possible till this state of things is remedied.

Imprisonment for debt still exists in India, but separate accommodation is provided for imprisoned debtors, and they are in all respects treated with humanity and a due consideration of their rights and necessities.

Much attention has recently been paid in India to prison statistics and the results obtained form the most reliable collection of facts in existence relating to the civil state of the British Empire in the east. The information gathered is divided into three categories—judicial, financial, and vital—and under each head a few of the most salient points of interest are noted. The vital statistics of the prisons of Lower Bengal since 1867 have been drawn up in the manner suggested by Dr. Farr, the president of the Statistical Society of London, than whom no higher authority exists. They show the average number of prisoners in custody, the number and causes of deaths, sickness and death-rates, average terms of sentence, duration of imprisonment, &c., &c. In addition, the Bengal returns contain facts connected with age, sex, caste, religion, occupation prior to and during imprisonment, sentence, dietaries, state of health on admission and discharge, and the locality of imprisonment in its influence on sickness and mortality.

Originally the chief occupation of prisoners in India was extramural, either in making imperial roads or in station-improvements. Subsequently remunerative industrial labor was introduced, and each prisoner had a task assigned him equal in amount to that performed by a fairly skilled artisan of the same class. It is sought to make it as much as possible an instrument of reformation, which is accomplished by teaching each convict some handicraft that will enable him to earn an honest living on his release, and by inculcating habits of industry that will counteract the idleness that is the proximate cause of much of the vice that leads to crime.

Industrial labor is the basis of the Indian system, although within the last two years out-door work has been revived, and large gangs of convicts are now employed on the canals; a system which, on moral grounds, must be considered a retrograde measure.

Prison dietaries in India have been arranged with a view to giving all that is really required for health and strength, and withholding everything that would place the prisoner in a better condition than the poor and honest in his own walk of life. The hospital dietary is unrestricted. A *penal* dietary, for serious breaches of prison discipline and for short-term prisoners, has also been introduced. The other punishments em-

ployed for prison offenses are fetters, separate confinement, flogging, and penal labor. Separate confinement cannot always be resorted to, on account of inadequate cell-accommodations, so that flogging is employed to an extent that is lamentable.

Education—*i. e.*, instruction combined with moral and religious training—is unknown in Indian jails. Religious acts and observances are practically forbidden to native prisoners, for whom no ministration is or can be provided. Christian prisoners have the aid of pastors, and other prisoners may obtain similar aid on application. Proselytizing by Christian missionaries is, however, peremptorily prohibited. For secular instruction no special provision is made, though much has been done by zealous individual officers in the way of primary instruction.

One of the chief peculiarities of Indian prison management is the employment of convict agency. The small salaries allowed render it difficult to procure suitable persons as prison keepers. This led to the trial, many years since, of well-behaved, long-term prisoners in this capacity. So successful was the experiment that the practice has now been extended to the whole of India, special provision for it having been introduced in all the jail codes. As a reward for good conduct and strict obedience to prison rules, all convicts whose behavior has been exemplary throughout, and who have completed the prescribed term of hard labor, are eligible for the offices of convict-warder, guard, and work-overseer, which offices can never exceed 10 per cent. of the criminals in custody. The financial and reformatory results of this system have been satisfactory. It teaches self-respect and self-control, and few prisoners who have held such offices have relapsed into crime.

There are no prisoners' aid societies in India. In the large stations, a few philanthropic individuals occasionally interest themselves in the matter, but the constant changes in Indian society have rendered continual and combined action impossible. Convict artisans, trained in jail, find no difficulty in obtaining employment, and few who have attained any degree of skill ever return to prison.

The governors of provinces and the viceroy of India possess absolute power of pardon, but such powers are never exercised without careful inquiry and grave deliberation.

To nearly every prison is attached a garden, wherein are raised the vegetables and fruit required for prison consumption, any balance over and above the prison wants being sold. The chief object of the garden, however, is to counteract the scorbutic tendency of sedentary employment in work-sheds, by affording a wholesome amount of out-door occupation in useful directions.

§ 2. *Ceylon*.—The principal prison upon the island in Ceylon is that at Wellikada, an account of which was prepared for the congress by Mr. H. J. Duval, inspector-general. Here separate confinement with rigorously penal labor is enforced during the whole term of short sentences and the first six months of long sentences. Long terms of imprisonment are divided into three stages, called, respectively, the penal, secondary, and upper stage.

On admission, every prisoner is placed in the penal stage, there to pass the first six months, in the case of a long sentence, or the whole term, in that of a short one. No part of this stage is remissible, but it may be prolonged by misconduct. This stage is found to exercise a most beneficial influence in subduing the prisoners, and preparing them for the next. In the case of short-term men, it is highly deterrent.

At the termination of the penal stage, prisoners are removed into the secondary or industrial hard-labor stage. Here the mark system begins.

Each convict is debited with a number of marks corresponding to the number of days in his sentence, minus the first stage. By industry and good conduct, he may earn nine marks per week, and this maximum continued will close his mark account at seven-ninths of the period, the remaining two-ninths being remitted. If he earn only eight marks weekly the reduction of time is only one-ninth.

Breaches of discipline are rare. The punishments employed are forfeiture of marks, a return to the penal stage, and flogging, which latter, however, is never used except in cases of mutiny, and the number of lashes never exceeds twelve. The wholesome dread of a return to the penal stage is usually sufficient to stimulate the convicts to industry and obedience. In this stage, they are employed at such hard labor as they may be fitted for by their previous habits and occupation in life, the object being to make their labor as productive as possible.

Religious instruction cannot possibly be general in a country settled by many races, professing a multitude of religious or superstitious creeds. At the large prisons, the ministers and native catechists of various missionary bodies hold service on Sunday, but attendance on these ministrations is optional with the prisoners. Native school-masters also give instruction in the vernacular languages on each Sunday afternoon; but, attendance at school being optional, few avail themselves of the offered instruction, the great majority preferring to spend the day in idleness.

The third or upper stage is a privilege awarded only to the few. Prisoners who have served at least two-thirds of their sentence, and who have, while in the industrial stage, distinguished themselves as good prisoners and skillful workmen, are promoted to be prison constables, their duties being to assist the subordinate officers in the maintenance of order and discipline in the prison. When employed on public works, they act in the capacity of foremen, being generally selected with a view to their fitness for such work. While holding this appointment, they are credited with one rupee per month, which is paid to them on discharge from prison.

§ 3. *Jamaica*.—On the island of Jamaica there are four classes of prisons: 1st, the general penitentiary; 2d, county jails; 3d, district prisons; 4th, short-term prisons. To the first of these establishments are sent all convicts whose term of sentence exceeds twelve months and all soldiers and sailors condemned by court-martial. The labor is both penal and industrial. The tread-mill is made slightly remunerative by being attached to a mill for grinding corn. Prisoners, when not at work on the tread-mill, are employed in quarrying and cutting stone, and as brick-makers, lime-burners, carpenters, coopers, masons, blacksmiths, tinsmiths, tailors, shoe-makers, &c., under the instruction of competent tradesmen employed for that purpose, and supervised by an intelligent overseer of works from England. The convicts work in association, but in silence. The women are employed in the domestic work of the prison and in picking coir.

The diet is designed to keep the prisoners in good health, but without pampering them. The cost per diem for each convict during the past year was a little more than 3½d.

A clergyman of the church of England is employed as chaplain, but all prisoners are allowed to see the clergy of the denomination to which they may belong.

The reward for good conduct, awarded to all prisoners except recidivists and those guilty of a peculiar class of crimes, is promotion to the "license-class," a position much coveted, and to which a convict is eligible after having satisfactorily served half his time. This promotion carries with it a remission of one-fourth of the original sentence.

The punishments employed in the case of males consist of degradation from the "license-class," solitary confinement on bread and water, and, in exceptional cases, the cat, which, however, is never administered except with the approbation of the governor of the island, to whom is sent a full statement of the case. The only punishments for women are solitary confinement on bread and water and degradation from or denial of admittance to the license-class. This degradation, whether in the case of men or women, involves the loss of all the time earned by the prisoner through good conduct. So wholesome a dread is felt by the convicts of this penalty that it has not been found necessary to inflict it in a solitary instance during the last two years.

The county jails are used chiefly for the confinement of debtors and persons awaiting trial. They are employed as places of punishment only for misdemeanants. No labor is carried on.

In the district prisons (five in number) are confined prisoners whose sentence does not exceed twelve months. The inmates are visited daily by a government medical officer, and by the inspector of prisons not less than once in three months. The magistrates of the parish also act as official visitors, and have power to inflict punishment—*i. e.*, to sentence to solitary confinement on bread and water. The nearest clergyman acts as chaplain on Sundays. The prisoners are confined in association wards, the only separation being that of the sexes.

The short-term prisons (of which there are also five) are designed to supplement the district prisons, by obviating the necessity of sending petty criminals twenty or thirty miles to undergo a sentence of a few days' duration, the whole of which was before their establishment sometimes occupied in making the journey. Prisoners may be received into these prisons for periods not exceeding sixty days. They are supervised by a sergeant of constabulary, whose wife acts as matron, and by a task-master. They are employed on the main roads breaking stones and picking coir.

The inspector-general of prisons on the island, Mr. Shaw, in the paper submitted by him to the congress, of which this section is an epitome, calls attention to the very marked falling off in the number of crimes committed by women, the decrease since 1864 having been 70 per cent. This reduction he attributes to the fact that, in 1864, orders were given to have the hair of women sentenced to hard labor cut close; immediately the decrease commenced. A negro woman prizes nothing so highly as her hair, and it is a common practice for many of them to have their hair cut off before trial, and kept for them until their release, when they fasten it on again. Those who are less provident sedulously seclude themselves until their hair has grown.

Mr. Shaw says that after considerable experience with prisoners, and having paid much attention to all that has been said and written on the practicability of deterring people from crime, he is compelled to confess that he knows no preventive measure so efficacious as cutting off the hair of negro women.

§ 4. *Victoria*.—There is but one convict-prison in Victoria, which is for males only. The officers are appointed by the governor in council, to hold office during good behavior, and after service they have retiring gratuities and yearly pensions.

The prisoners are divided into six classes and may earn a remission of a portion of their sentence by good conduct. Those in the first class are kept in strict separate confinement, eating, working, and sleeping in their cells; those in the second, third, and fourth classes labor in association, but are separated by night; in the fifth and sixth classes they

are employed on public works, receiving rations of tea, sugar, and tobacco, besides being allowed a gratuity amounting to 2*d.* a day in the fifth and 6*d.* per day in the sixth class. The punishments employed are solitary confinement and extension of the term of imprisonment. Resort is never had to corporal punishment. The prisoners do not wear the parti-colored dress, the effect of which is believed to be merely degrading.

There are four chaplains connected with the English, Roman Catholic, Wesleyan, and Presbyterian churches, each of whom holds one service every Sunday. A schoolmaster instructs all the prisoners in reading, writing, and arithmetic for one hour every day, and facilities are afforded for the study of grammar, geography, and the elementary mathematics.

There is no strictly penal labor, nor is the prison labor let on contract. The chief kinds of work are quarrying, building, shoe-making, tailoring, carpentering, weaving, and mat-making. The value of the labor performed has averaged during the last five years about \$85 per head, exclusive of work done for the prison itself. The average annual cost *per capita* in excess of this sum, including food, clothing, and a proportionate share of the salaries, besides the estimated rent of the prison-property, has been about \$12.

No supervision is maintained over discharged prisoners, nor is any interest taken in their subsequent career.

The county jails are divided into two classes, one class being under the charge of the penal department of the government, the other under the police; about six months in the former, in the latter a few days, is the average sentence. In none of the jails is there penal labor, and in the police jails there is no labor of any kind. The prisoners work in association, and the average annual net earnings *per capita*, exclusive of any portion allowed to the prisoner himself, have been during the last five years about \$18. The shortness of the sentences (nearly one-half being for less than a month) prevents any permanently reformatory results.

There are three reformatories in Victoria, two of which are wholly, and one partially, supported by the state. As far as practicable the children's parents are required to contribute to their support; but the amount received from this source is insignificant. The limits of age within which children are received are eight and fifteen.

The boys are employed in tailoring, shoe-making, carpentry, sail-making, and seamanship. The girls perform the domestic work and are instructed in needle-work. The products of the inmates' labor are not sold, the work done being entirely for the use of the institution.

In nearly every case the children obtain a situation or are sent to their parents. In the latter case they are no longer under the care of the institution. When licensed to employers they are considered still under its control, and may be returned to it if not doing well.

Prizes are given for proficiency in school and in labor, and early discharge to service for good conduct. Those who distinguish themselves in this particular are appointed monitors, captains of messes, &c. The punishments are extra drill, privation of food for short periods, and corporal punishment, not exceeding twelve stripes, on hand or breech.

Record is made of the children's conduct while in the institution, and also after their discharge, as far as it can be ascertained.

PART SECOND.

WORK OF THE CONGRESS.

INTRODUCTORY.

It is obvious, on the slightest reflection, that a body like the Congress of London, coming together from so many different countries and composed of members having little previous knowledge of one another, and ignorant especially of each other's opinions on the questions which they had met to consider, would be ill-suited to intelligent, harmonious, and, above all, effective work, without some carefully-prepared chart to guide them in their labors. Impressed with this idea, the national committee of the United States had embodied in its final circular letter, addressed to the national committees of other countries, a recommendation that an international committee, to be composed of one or several members from each country which proposed to take part in the congress, should meet in London on the 24th of June, ten days in advance of the congress itself. Conformably to this recommendation, the proposed committee convened at the time and place named, and organized by choosing the undersigned as chairman and Edwin Pears, esq., as secretary, the latter gentleman to act as such throughout the sessions of the congress. Even the international committee found itself too unwieldy a body to do the work assigned it in a satisfactory manner, and designated a sub-committee, which it named an international executive committee, consisting of one member from each country represented in the general committee. Of this smaller body, G. W. Hastings, esq., of England, was made chairman. These bodies met usually on alternate days, though sometimes on the same day at different hours, the smaller preparing the business and reporting it to the larger for a broader consideration and a final determination. The two committees thus labored assiduously at the work of arranging the programme of proceedings, and all other matters of a preparatory kind, down to the very eve of the opening of the congress. Before dissolving itself, the larger committee constituted the smaller a permanent committee, to sit every morning for the purpose of considering any questions that might arise in the progress of the labors of the congress, and especially to prepare business for it from day to day. It also named the Right Honorable the Earl of Carnarvon permanent president of the body, although, owing to the state of his lordship's health, it was understood that he would be able to preside only at the first session, when he would deliver the opening address. The arrangement resolved upon for securing a presiding officer throughout the continuance of the congress was to select a member as vice-president each day. The general committee, before its dissolution, did the undersigned the honor to name him for the first day, and left the duty to the executive committee of designating the gentleman to act as chairman for each of the succeeding days.

The programme of questions to be submitted to the congress was arranged upon the principle of considering, first, the treatment of the prisoner before conviction; secondly, his treatment during the time of

punishment; and, thirdly, his treatment after discharge. But a considerable number of questions, deemed important to be discussed at this meeting, do not properly fall within either of the above categories; besides which, the whole subject of juvenile delinquency and its treatment, and that of penitentiary systems, refuse equally the strictly logical classification indicated above. These matters are accordingly treated in three distinct chapters of the present report.

The English government had not originally given that cordial hospitality to the idea of the congress which had been extended to it by other governments, both European and American. But whatever coolness it may have shown at first was amply atoned for by the fullness and warmth of its sympathy after the congress had been organized and had gotten fairly at work. It deputed Major Du Cane, chairman of the directors of convict-prisons, to attend the sessions of the congress, and instructed him to give all possible information concerning the English convict-system and its workings. It threw open to the members every prison and reformatory in the United Kingdom, and gave instructions to their governors to afford special facilities for observing and understanding everything connected with their organization and management, even to the minutest details. His Royal Highness the Prince of Wales attended a *soirée* given to the congress by the people of London, at which members were individually presented to him, with many of whom he conversed freely, expressing a warm interest in the meeting, and in its objects and work. The lord chancellor gave a state dinner to the American judges and some other leading American delegates; and the Earl of Granville, secretary for foreign affairs, invited the entire congress to a magnificent *soirée* at his rooms in the foreign office. Several members of Parliament also, besides attending and participating in the proceedings of the congress, gave dinners or *soirées* to its members at their residences in town or invited them to their country seats in the neighborhood. The home secretary, the Right Honorable H. A. Bruce, to whose department the care of prisons belongs, attended in person one of the sittings of the congress; and, in an eloquent address to the body, he expressed the gratification he experienced in appearing before it and in conveying to it his own and the thanks of the government for having chosen England as the place of meeting, and their high appreciation of the spirit in which the members had undertaken their task; adding highly interesting statements in regard to prison work and prison reform in England, and particularly in reference to the diminution of crime in that country, as shown by the penitentiary returns received at his office during the last ten years.

As has been already stated in the general introduction to this report, the congress was opened on the evening of the 3d of July by an address from Lord Carnarvon; and on the morning of the 4th its real work began. The undersigned, appointed president for the day, opened the work of the congress with the short address which follows:

LADIES AND GENTLEMEN: Called by the kindness of the international committee to preside over this dignified assemblage, on this its first working-day, while expressing my gratitude for so distinguished an honor, I beg to offer a remark or two touching the occasion which has brought us together from so many different countries. This congress is convoked in the interest of humanity, of civilization. It is composed of thinkers and workers in one of the great departments of social science and social reform, representative men and women gathered literally from the ends of the earth. We have here representatives of governments, of prison societies, of penal and reformatory in-

stitutions, of governing boards of penitentiary establishments, of high courts of criminal jurisdiction, of police boards, of associations of jurists, of the penal law departments of universities, and of the academy of moral and political sciences of the Institute of France. There are present also many other persons who, though not belonging to either of the categories named, have long been devoted to penitentiary and humanitarian studies, and who have brought their great knowledge and their great hearts to help us in our labors. The special work of this congress is to study, and, if possible, to solve, the problems, as grave as they are difficult, involved in the treatment of crime and criminals. The congress, composed as has been explained, and embodying, therefore, representatively, the knowledge, experience, and wisdom of the world on this subject, has a great opportunity before it, great and full of promise. It is as great an opportunity as the noblest ambition could desire; but equally great is the responsibility which it brings with it; for let it be remembered that opportunity and duty are evermore correlative. God has joined them together, and man cannot put them asunder. The business of this congress, if I conceive it aright, is not to fritter away its time, strength, and zeal in minute details, and especially not to give expression to a preference for one penitentiary system over others, but to agree upon certain broad principles and propositions which may be made to underlie, permeate, vivify, and, above all, to render fruitful any and all systems of criminal treatment. We have come together to give shape, point, and practical force to a great movement in favor of penitentiary reform, may I not almost say a great upheaval of the public conscience throughout the civilized world on this subject? Let us see to it that we rise to the full height of our duty. Let us see to it that we give a wise direction, as we can hardly fail to impart a strong impulse, to the movement which I have indicated. If we do not fail in this, as I feel sure we shall not, and if we follow up our present work with some permanent organization that shall perpetuate, enlarge, and intensify its results, it seems to me not an unreasonable hope that the next fifty years will see a progress in the methods and processes of criminal treatment, and especially in the principles and application of a reformatory prison discipline, which all the ages hitherto have scarcely witnessed.

Ladies and gentlemen of the congress, let us address ourselves to our work with courage, resolution, intelligence, and, above all, with a hearty love of truth and a genuine brotherly accord, and we cannot doubt that the guidance and blessing of Heaven will attend our labors.

CHAPTER XVII.

THE PRISONER AFTER ARREST AND BEFORE CONVICTION.

This question was stated in the following terms: "What should be the treatment of prisoners before conviction?" The discussion was opened by Count de Foresta, procureur-général of Ancona, Italy. He expressed himself as opposed to associated imprisonment prior to conviction, more especially in cases where there was reason to fear that a prisoner by such association might defeat the ends of justice. He thought it an absolute duty of the authorities to provide isolation for such prisoners under arrest as might desire it; and in no case should a man who

was still deemed innocent be compelled to associate with others in a prison against his will. It was, at best, a hard necessity that a man should be locked up in a jail before he was convicted of any crime.

The Rev. Mr. Collins, of Tremardale, Bodmin, thought that the frequency of imprisonments before conviction might be, and ought to be, largely reduced. The plan he suggested to effect this was that, in all cases at present bailable, a system of personal bail should be substituted for a money bail. Instead of the existing arrangement, by which a sum of money is forfeited on the prisoner's failure to answer his recognizance, he would make the forfeit, in case of his non-appearance a full day before that appointed for his trial, liability to the full penalty of the crime with which he stands charged. He thought that this would secure his attendance much more effectively than the present system of bail, since no sane man would expose himself to a certain and extreme penalty, when, by surrendering himself, he would have all the chances of escape which a trial offers. Such a plan would have the advantage of placing the poor man, now often unable to obtain sureties, on a level with his richer neighbor. It would also tend to imbue the public mind with the idea that imprisonment is in itself a punishment and a disgrace; it would save many an innocent man from an imprisonment not deserved; it was in strict accord with the maxim that every man was to be deemed innocent until proved guilty; it was an economical arrangement, as it would save the cost of the prisoner's support, and humane, since it prevented the sundering of wives and families from their bread-winners.

Mr. Stevens, of Belgium, said that in his country safe custody was regarded as the only object of preliminary detention, and hence all who were able were allowed to purchase small luxuries. Before trial, all prisoners were well accommodated.

Mr. Pownell, of England, said that the bench, with which he was connected, had anticipated this question. Every man being considered, in law, to be innocent until proved guilty, it seemed that an undeserved stigma was inflicted upon a man by sending him to jail before conviction. Hence a house of detention had been built for the reception of persons awaiting trial. The inmates were isolated, thus saving them from contamination and also from taunts flung at them, after liberation or acquittal, of having been incarcerated in a felon's cell. Various privileges were allowed them, such as the purchasing of their own food, if their means were sufficient, daily visits from friends, unrestricted consultation with their legal adviser, &c. This plan, he believed, was more just than to brand with the prison mark an untried man.

CHAPTER XVIII.

THE PRISONER DURING HIS INCARCERATION.

§ 1. *Proper maximum of prisoners for any single prison.*—The question "What ought to be the maximum number of prisoners or convicts detained in any prison?" was introduced before the congress by Mr. Ekert, of Germany, who said that during the many years through which he had been head of the prison at Bruchsal, this question had received much of his attention. He believed that five hundred should be made the maximum, and that the number should rather fall below

than exceed that figure. This proposition he urged on the triple ground of security, justice to the prisoner, and hope of reformation. A larger number would, in his opinion, render individualization extremely difficult, without which there can be no effective reformatory treatment of prisoners. Nor does an increased number of subordinates obviate the difficulty. The above view is in accordance with one of the fundamental principles of the Crofton prison system. The question of cost should not be made paramount, since where money considerations prevail, all reform too frequently comes to an end. He had arrived at his opinion after consultation with many competent authorities, whose belief coincided with that which had sprung up in his own mind after many years' experience as a prison officer and as president of the German Prison Society, in which latter capacity he had had an opportunity of obtaining information from all parts of the world on the operation of different prison systems.

Sir John Bowring, of England, was of opinion that large prisons were preferable to small ones, not only on the ground of economy, but also as affording a wider scope for emulation and moral improvement. The larger the scale on which labor is conducted, the more profitable are its returns, and he believed the same principle to hold true in the case of the operation of moral influences. Instruction is most easily imparted in universities, and a clergyman is more likely to make an impression on a large congregation than on a small one. The elements of improvement and the tendencies to deterioration should be considered in the treatment of each prisoner, and the larger the scale on which such observations are made, the more valuable would be the results.

M. Vaucher-Crémieux, of Switzerland, agreed with Herr Ekert, while admitting that, for financial reasons, a large number might be desirable. The difficulties of supervision, however, particularly in cellular prisons, were greatly increased. He quoted M. Demetz, director of the reformatory at Mettray, France, as holding that three or four hundred was a sufficient number for prisons of this class, and expressed his belief that in prisons conducted on the congregate system one thousand should be the maximum.

M. Stevens, of Belgium, thought that the question of expense should be subordinated to that of reformation. Looking at the question from that stand-point, he thought that in no prison should the number of convicts exceed five hundred, and in cellular prisons it should be even less.

Dr. Mouat, late inspector-general of prisons in the province of Bengal, India, while agreeing with M. Stevens as to the superior importance of reformation over economy, believed that excessive subdivision of prisons might be justly opposed as too costly. He believed that individual treatment was entirely practicable in a prison containing one thousand inmates, if the staff of subordinates were large enough to attend to the details and to the treatment of each prisoner. This number had been made the maximum by law in India, in 1864, partly on financial grounds, and partly with a view to moral and disciplinary treatment.

M. Petersen, of Norway, had, in the prison of which he was the head, an average of two hundred and twenty-four convicts. He considered this number too small, believing that large prisons could be more easily managed than small ones. With a small number of prisoners there was a tendency to go too much into detail and speak too much with them. Prisons conducted on the separate system should, he thought, have between three hundred and four hundred inmates.

Hon. H. H. Leavitt, of Ohio, said that the state-prison of that State

contained one thousand prisoners, which number had not been found so large as to prevent reformation.

Mrs. Janney, of Ohio, remarked that the authorities of the Ohio state-prison were of the opinion that six hundred was a sufficient number, and that it would be impossible for a warden to become individually acquainted with one thousand.

Colonel Colville, for eighteen years governor of Coldbath Fields Prison, London, stated that the number of prisoners under his care at any one time had varied from one thousand five hundred to two thousand two hundred. He favored large prisons on financial grounds, and believed that, by the employment of a proper number of officials, all the advantages of smaller prisons might be secured, though he admitted that there was a tendency to limit the number of officials. Thus, while ten small prisons would have had ten schoolmasters, Coldbath Fields had but one. He had never, however, met with any difficulty in maintaining discipline, and a cheerfulness had prevailed which had often surprised him.

Dr. Frey, of Austria, thought it impossible to fix a precise number. The great question was how far the head of the prison would be able to come into personal contact with each prisoner. If, as in Austria, he was free from all economical matters, and had nothing to do but manage the prisoners and see that they were well treated, he could attend to a large number; but if he had other duties, the number must be smaller.

General Pilsbury, of New York, thought that five hundred or six hundred should be the maximum. He felt sure that he himself would not be able to give personal attention to one thousand prisoners.

Professor Foynitsky, of Russia, thought that individual treatment should not be sacrificed to financial considerations.

Mr. Frederic Hill, of England, contended that there might be individual treatment in large prisons. The Glasgow prison, when he was acquainted with it, had many hundreds, but there was individual treatment nevertheless.

Baron von Holtzendorf, of Prussia, considered number dependent on the system of management. In a cellular prison, five hundred should be the maximum, and perhaps three hundred would be better, but in public-works prisons there might be six hundred or one thousand.

§ 2. *Classification of prisoners.*—The question whether the classification of prisoners ought to be considered the basis of all penitentiary systems, associate or separate, was introduced by privy councilor d'Alinge, of Saxony, who prefaced his remarks by saying that the criminal is a moral invalid, whom we desire to help. This help can be rendered only by interrupting his criminal course, and by saving him from a relapse. In order to effect this end, three things are necessary: 1, care must be taken to ascertain the moral failing which prompted him to crime; 2, means must be employed adequate to the removal of this failing; 3, the convalescent must be provided with the full power of resisting, by dint of his own efforts, a relapse. The only means for the achievement of this triple end are education and classification. The first problem of the penitentiary authorities, then, is to obtain as clear an image as possible of the mental and moral condition of the prisoner. To the practised eye of the official, such an image is, in many cases, patent. In others, it will be necessary to isolate and watch the prisoner. Having made a moral diagnosis of the state of each prisoner, we shall find that he belongs to one of two classes: Either he is so depraved as to have no power of will to do good remaining, (in which case another will must be substituted for his own,) or he has sufficient power left to

rouse himself and strike out a better path on the strength of his spontaneous resolve. To one of the former class we say, "You *shall* become a better man;" those in the latter say, "I *will* become a better man." Thus the inmates of a penitentiary naturally divide themselves into three sections, which are best designated as disciplinary classes. Those who show little or no inclination to meet the educational endeavors of the authorities, only bending at the words "you *shall*," form the *third* disciplinary class, or lowest grade. Those who, with the thought "I *will* be better" in their minds, co-operate readily with the exertions of the authorities in raising their moral culture, and who, with a determined will and all their strength, profit by the means placed at their disposal, form the *second* disciplinary class. Those, lastly, who for some time have endeavored to improve, and justify a hope of steady progress on their return into society, form the *first* disciplinary class. Such a classification demands of the managers a course of action similar to that of the physician. They must, by employing adequate modifications of prison discipline and educational agencies at their command, treat the prisoner operatively, curatively, and dietetically. Such a classification, based on true psychological individualization, will and must, in every prison system, work to the highest benefit of the prisoner, and, in consequence, improve the political condition of the country adopting it. In Saxony, this system has been applied to 50,000 prisoners with the greatest success.

M. Stevens, of Belgium, said that in that country there are two systems of classification. One is based on external conduct: obedience, submission, and industry. Under this system there are three classes: the good, the passable, and the bad. The other rests upon moral character, a much more difficult matter to ascertain, since God alone can judge the heart.

Dr. Mouat, of England, had formerly had sixty prison officers under his control in India. It was their unanimous opinion that moral classification was impossible, and that a moral barometer was a chimera, since prisoners did their best to conceal their real character, lest they should suffer harsher treatment.

Mr. Tallack, of England, agreed with Dr. Mouat, and thought that the impossibility of moral classification was one of the strongest arguments for the cellular system, under which every prisoner was a class by himself.

Dr. Marquardsen, of Germany, member of the Reichstag, believed moral classification to be impossible. No doubt any system of classification was better than none at all, but he believed the cellular system to be the true basis.
